

Recommendations from Wenatchee Biological Strategy:
Lake Wenatchee Sub-Watershed
 1) Protect remaining near shore habitat, and develop a means to reduce impacts of bulkheads.

Little Wenatchee Sub-Watershed
 1) Protect stream channel, riparian and floodplain functions: focus on Little Wenatchee River falls downstream to mouth.
 2) Address road impacts in the drainage, emphasis on Rainy Creek and Little Wenatchee between Hidden Creek and Fir Creek.
 3) Restore wetland complexes that connect to stream channel.
 4) Manage recreation areas to reduce impacts to riparian cover.
 5) Initiate public information efforts to discourage harassment of spawning salmonids.

White River Sub-Watershed
 1) Protect stream channel, riparian and floodplain functions. Focus on Panther Creek downstream to mouth.
 2) Restore wetland complexes that connect to stream channel.
 3) Protect shorelines along Lake Wenatchee near White River mouth.
 4) Initiate public information efforts to discourage harassment of spawning spring chinook, sockeye salmon, and bull trout.
 5) Manage recreation areas to reduce impacts to riparian cover.
