# TRUMANTAN?

The house next door to mine just sold for \$300,000 so the Assessor will now assess my house which is nothing like the house next door for \$300,000 as well.

This is a MYTH. The truth is that every real property in Chelan County is assessed first as vacant land and then any existing structures are added as improvements using standardized cost manuals for size, materials, construction quality, amenities, that are adjusted to our local economy. Once we have the property "built" on our assessment rolls we then look at the previous years sales data for market trends (either up or down) for neighborhoods, which are areas that sell similar. One sale does not make a market so we strive to get at least 3 sales in a neighborhood before adjusting the values. A market adjustment by percentage is applied to all properties within a neighborhood if our sales analysis shows that there is a change to the fair market value.

My assessed value and property taxes went up because the County needs more revenue.

This is a MYTH. The truth is that your property taxes are calculated based on the budgets submitted by the taxing districts that provide you services. These budgets are prepared independently from assessed property values.

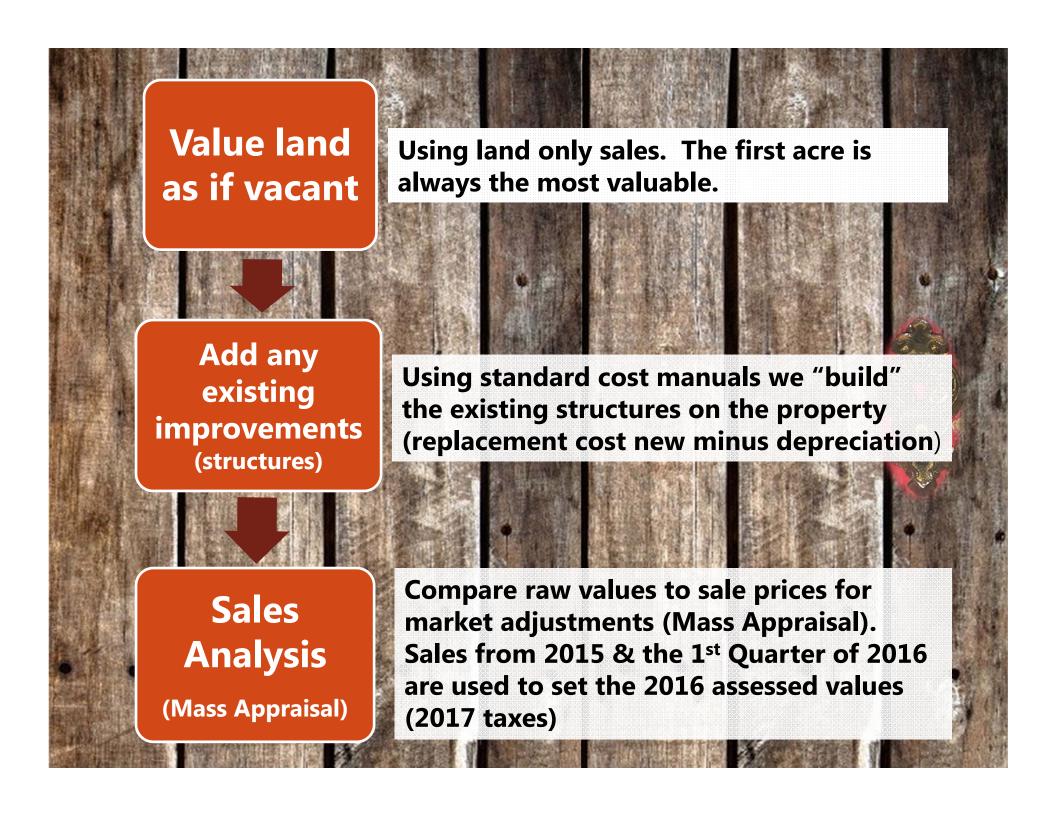

I am 62 years old, own my home, make less than \$40,000 per year and love to spend my winters in sunny and warm Arizona. My home still qualifies for the Senior Program even though I do not live here year round.

This is a MYTH. The truth is that in order to qualify for the senior exemption you must live in your home for <u>more than</u> six months each year unless you are temporarily in a hospital, nursing home or other facilities. Property used as a <u>vacation or rental home</u> is not eligible for the exemption program.

## Mass vs. Fee Appraisal

## Fee (Single) Appraisal:

- Uses comparable sales which are similar to the subject property.
- Sales are identified that best represent the subject property.

## Mass (Groups) Appraisal:

- Uses large quantities of sales to develop statistics from the data.
- Results of analysis are applied to a group (neighborhood) as a market adjustment (percentage).
