1.12 Minimize direct vehicular access from private property onto arterial streets and collectors. Instead, encourage access via frontage roads or connecting local streets.

1.13 Pursue the restriction/elimination of roadway access points as opportunities arise to maintain the capacity, operations and safety of existing arterials and collectors.

1.14 Maintain access to existing airport and floatplane facilities and accommodate needed expansion to serve growing population and employment needs.

1.15 Support the Emergency Management Service and the school bus services to address their specific needs in the prioritization of roadway maintenance activities.

1.16 Where possible, use the planning process and SEPA to evaluate impacts to safety, access, roadway/intersection operations, environmental processes, and apply transportation concurrency to measure the adequacy of the impacted roadway segments from new development.

1.17 Provide Active Transportation facilities along designated routes that rate "acceptable" or "good" according to the active transportation level of service definitions established in the transportation element.

1.18 Provide connectivity to Link transit stop locations that rates as "acceptable" or "good" according to the transit level of service definitions established in the transportation element.

II. Goal 2 – Provide a Safe System

Create a transportation network that can be shared safely by all users and provides sufficient access for emergency response.

2.1 Recognize the needs of all users of the transportation system including motor and freight vehicle drivers, bicyclists, pedestrians, and public transportation users, and balance the needs in all types of *rural* and *urban* transportation and development projects and through all phases of a project.

2.2 Apply adopted County Road Classification and Design Standards in the design and construction of roadways consistent with Title 15.30 of the Chelan County Code.

2.3 Maintain a functional classification system, and design roadways in accordance with functional classifications and 20-year travel demands.

2.4 Treat safety, and preservation of the existing roadway systems as high priorities.

2.5 Work with WSDOT and other agencies to improve multimodal traffic safety of roadways and intersections that intersect with county facilities, consistent with RCW 47.04.035 Complete Street Principals.

2.6 Evaluate proposed transportation projects for their impacts to emergency service access and existing uses.

2.7 Include specific provisions for nonmotorized travel in the design of all new and existing transportation facilities, where feasible.

2.8 Encourage safe and convenient nonmotorized connections between developed and developing areas.

2.9 Establish a system of designated bicycle and trail routes for transportation and other recreational uses utilizing existing transportation corridors where safety considerations are not compromised.

2.10 Support improved non-motorized and trail signage.

2.11 Recognize the non-motorized system as an extension of transit, and support needed linkages and access to transit stops.

2.12 Apply Americans with Disabilities Act (ADA) guidelines to facilitate access within urbanized areas and implement the policies and recommendations of the ADA Self-Evaluation & Transition Plan.

2.13 Improve the safety and efficiency of railroad crossings.

2.14 Discourage the use of dead-end roadways in new developments, where feasible.

2.15 Develop and maintain a countywide safety plan to address systemic safety concerns on county rural roadways.

III. Goal 3 – Ensure Financial Viability

Plan for a system that is financially viable, including consideration of full lifecycle costs in infrastructure investments and leveraging outside funds (including grants and private dollars) wherever possible to maximize community benefits.

3.1 Establish a prioritization system based on criteria and ranking of transportation projects based on the three highest county priorities – safety, leveraging of outside funding sources, coordination with other agencies.

3.2 Promote the equitable distribution of the costs of transportation facilities between the public and the private sector.

3.3 Develop the annual Six-Year Transportation Improvement Program (TIP) so it is financially viable, leverages available county funding, and is consistent with the Comprehensive Plan.

3.4 Ensure that new development mitigates their impacts on the transportation system.

3.5 Maintain the existing development review process for transportation that addresses concurrency, SEPA, Road Standards, and other impacts and potential mitigation requirements per Title 15. Review the cumulative transportation impacts of new development and implement methods of sharing mitigation costs.

3.6 Provide for Latecomer Agreements to better allocate improvement costs.

3.7 Explore implementation of a Transportation Impact Fee program to help fund the implementation of growth-related transportation projects.

3.8 Improve the sustainability of the county's funding maintenance, operations, and capital improvements. Periodically review funding status and consider increasing the County Road Levy, including possible voter approval of a Levy lift. Consider formation of a Transportation Benefit District (TBD) to help fund county and/or regional transportation improvement projects. Explore and

implement other public/private funding options such as Local Improvement Districts (LID) and Road Improvement Districts (RID).

3.9 Coordinate among jurisdictions (Chelan County, Cities, LINK Transit, Port Authority of Chelan County, WSDOT, and incorporated cities) to jointly fund transportation improvements.

3.10 Pursue a range of grants to help fund roadway and multimodal transportation improvement projects.

3.11 Work with State legislators, other counties, local cities, and other stakeholders to reduce restrictions on use of Planned Action Ordinances, Transportation Benefit Districts, and other available funding programs.

IV. Goal 4 – Support Land Use

Provide a transportation system that works hand-in-hand with existing and planned land uses, supports farm-to-market and recreational tourism needs, and balances economic development with existing users.

4.1 Review and update the transportation element concurrent with major Comprehensive Plan Update to respond to changes in land use planning, funding, or operating of the transportation system and in accordance with state law

4.2 Prioritize and support improvements to facilities that are critical components of the intermodal transportation systems (e.g. roads leading to airports, rail transfer facilities, access to businesses, agricultural lands and employment centers, etc.).

4.3 Prioritize and support improvements to the County Freight and Goods Transportation System (FGTS) roads to complete an All-Weather Road System.

4.4 Promote coordinated non-motorized system improvements focusing on access to schools, parks, transit services, employment and service centers, and shorelines.

4.5 Coordinate with other agencies to develop a Comprehensive Trails Plan to analyze alignment, design, cost, phasing and relative priority of trail projects, and to identify the needed linkages between the trails.

4.6 Encourage transit facilities and services as mitigation, where appropriate, for new developments.

4.7 Encourage improved water transportation on Lake Chelan.

4.8 Protect existing public access to public waterways and lands and seek opportunities to increase public access wherever practical.

4.9 Coordinate with Cities, communities and port districts, where possible, to accommodate industry in new growth areas.

4.10 Require development to include public and non-motorized transportation compatible designs in all projects.

4.11 Support urban growth boundaries, urban nodes, residential centers, and employment centers identified in local comprehensive plans in order to promote an efficient land use pattern and transportation network integration.

4.12 Ensure development regulations are flexible and receptive to innovations and advances in transportation technology.

V. Goal 5 – Environmental Stewardship

Avoid and minimize negative environmental and societal impacts from the transportation system and enhance the natural and social environment when possible.

5.1 Consider and be respectful of the rural and historic character of the county while implementing the transportation element.

5.2 Encourage the development and implementation of transportation demand management programs appropriate for the various communities in the County to reduce greenhouse gas (GHG) emissions and vehicle miles traveled (VMT).

5.3 Coordinate with and adhere to regional, State, and Federal agencies on reducing air quality impacts.

5.4 Consider refinements to roadway design standards so as to minimize impacts on hydrologic systems, including surface and groundwater quality.

5.5 Provide flexibility on the width of pavement and lanes to allow for narrower lanes while still assuring that roadways function safely for cars and trucks, public transportation, bikes, pedestrians,

and other service vehicles. The use of alternatives to impervious surface materials, wherever possible, should also be considered.

5.6 Develop alternatives to transportation improvement projects when significant adverse environmental impacts have been identified.

5.7 Develop and apply mitigation strategies to reduce unavoidable adverse environmental impacts of transportation improvements.

VI. Goal 6 – Be an Active Partner

Coordinate with a broad range of groups (including local, state, and regional agencies, key stakeholders, businesses, and the public) to develop and operate the transportation system.

6.1 Coordinate with Cities, Chelan-Douglas Transportation Council (CDTC), LINK Transit, Washington State Department of Transportation (WSDOT), and other adjoining agencies.

6.2 Encourage public participation in transportation-related decisions and provide forums to help citizens understand transportation issues.

6.3 Work with cities to develop and adopt street design standards for each city's Urban Growth Area.

6.4 Develop consistent or compatible processes to identify and set priorities for transportation improvement projects in each agency's six-year transportation improvement program.

6.5 Coordinate with the US Forest Service relative to their activities and policies on transportation.

6.6 Prioritize projects that help to create a comprehensive, integrated and connected network of roads, trails, and other transportation services.

6.7 Coordinate maintenance activities and annual maintenance programs with adjacent jurisdictions, Forest Service, and WSDOT.

6.8 Work with WSDOT to provide input into the planning process and to explore opportunities to implement the State Airport Plan.

6.9 Work with WSDOT to provide input on the State Rail Plan and to facilitate implementation of rail transportation facilities and services.

6.10 Work closely with local, regional and State partners to monitor rail freight activity and ensure that the county's priorities, preferences, and interests are represented and factored into emerging State and County policies and programs.

6.11 Explore opportunities for separated mixed-use paths to enhance enjoyment of natural/scenic areas in a safe manner.

6.12 Work with LINK Transit, WSDOT, and local agencies to develop park-and-ride, park-and-pool, and express transit service where the need for such facilities has been identified.

6.13 Work with other local, State, and Federal agencies to achieve improvements to transportation systems that promote safe and efficient access for recreational and tourism activities throughout the county.

6.14 Require dedication of roadway rights-of-way in land development processes, in accordance with the appropriate functional classification, County Road Standards, and County/WSDOT policies.

6.15 Recognize that Forest Service and primitive roads are generally unsuitable for residential development.

6.16 Support cooperative efforts to provide for docking of boats, barges, and float planes on Lake Chelan with the National Park Service, Forest Service, Chelan County Public Utility District, and the Port of Chelan County.

6.17 Ensure that stakeholders, including property owners, have an opportunity to provide comment on the expansion of trails and on transportation facility improvement projects.

Goal 7 – Resilient Transportation System

Ensure the local transportation system can withstand and recover quickly from the impacts of extreme weather events and other climate-exacerbated hazards, while maintaining continuity of access for residents, visitors, industry, and emergency services.

7.1 Improve street connectivity and multi-modal access, such as sidewalks, street crossings, and route redundancy, in urban growth areas and rural communities to ensure residents have safe evacuation options during wildfire and other climate-driven emergency events.

7.2 Reduce stormwater impacts from transportation infrastructure and development through watershed planning, redevelopment and retrofit projects, and low-impact development standards that limit impervious surface and manage runoff at the source.

7.3 Coordinate with WSDOT, Washington DNR, Chelan County Emergency Management, and local fire authorities to pre-identify and maintain alternative transportation routes and detour plans for road segments at high risk of wildfire-related closure and incorporate route vulnerability into capital improvement and vegetation management planning.

11.5 Transportation Vision

Looking into the future, Chelan County aspires to provide a transportation system that serves all users through the provision of safe and well-maintained facilities.

The following sections detail the capital plan to meet this transportation vision and the funding plan needed to ensure these capital investments and ongoing programmatic expenditures, including system operations and maintenance, are in place during the life of this plan.

In general, Chelan County roads are rural two-lane roads which mainly serve automobile traffic. Determining how the entire transportation network fits together throughout the county requires identifying desirable facilities for each mode and then identifying infrastructure enhancements to ensure safe, complete, and connected facilities for all users.

I. Active Transportation Network

Despite many county roads lacking pedestrian and bicycle facilities, active transportation modes are a key component of the proposed Chelan County transportation network vision. In line with the goals and policies, the county is committed to providing a multimodal transportation network that supports all travel modes and is consistent with the surrounding land use context.

As part of the Transportation Element update, Chelan County identified a proposed Active Transportation Network, as shown in Figures 11-26 through 11-28, along which facilities for bicycle and pedestrian modes should be considered. This network builds off the bicycle network identified by CDTC in the *Transportation 2050* plan. The network is also aligned with the active transportation facilities and networks found within cities and towns throughout the county. The system includes a hierarchy of connections and routes to provide a comprehensive network of roadway facilities that can accommodate multimodal travel and connect key destinations throughout the county. This network includes the planned multi-use path connections identified in the *Chelan-Douglas Pathways Master Plan.*

Most roadways within the Active Transportation Network are defined as Primary Routes, along which dedicated bicycle/pedestrian facilities are desired. The Secondary/Scenic Routes are low-volume roadways along which vehicles and active mode users are intended to share the road.

While most county streets tend not to need fully separated sidewalks or paths due to their low pedestrian and vehicle volumes, some of the county's arterials and collectors do warrant dedicated pedestrian infrastructure, particularly those near Urban Growth Areas. Population dense areas with commercial land uses and roadways that serve schools, parks, regional recreational destinations and churches support more pedestrians and may have a larger portion of vulnerable users than other streets. Measures such as widened shoulders that provide increased separation from moving vehicles, multi-use trails, marked crosswalks, and sidewalks at roadway crossings support pedestrian and bicycle travel throughout the county.

As part of HB 1181 passed in 2023, Washington State's Growth Management Act (GMA) was amended with the requirement that communities plan for a multimodal transportation network, including walking and cycling. The updated GMA requirements also mandate the adoption of active transportation LOS standards.

Figure 11-26
Active Transportation Network (Chelan, Manson, & Entiat Vicinity)

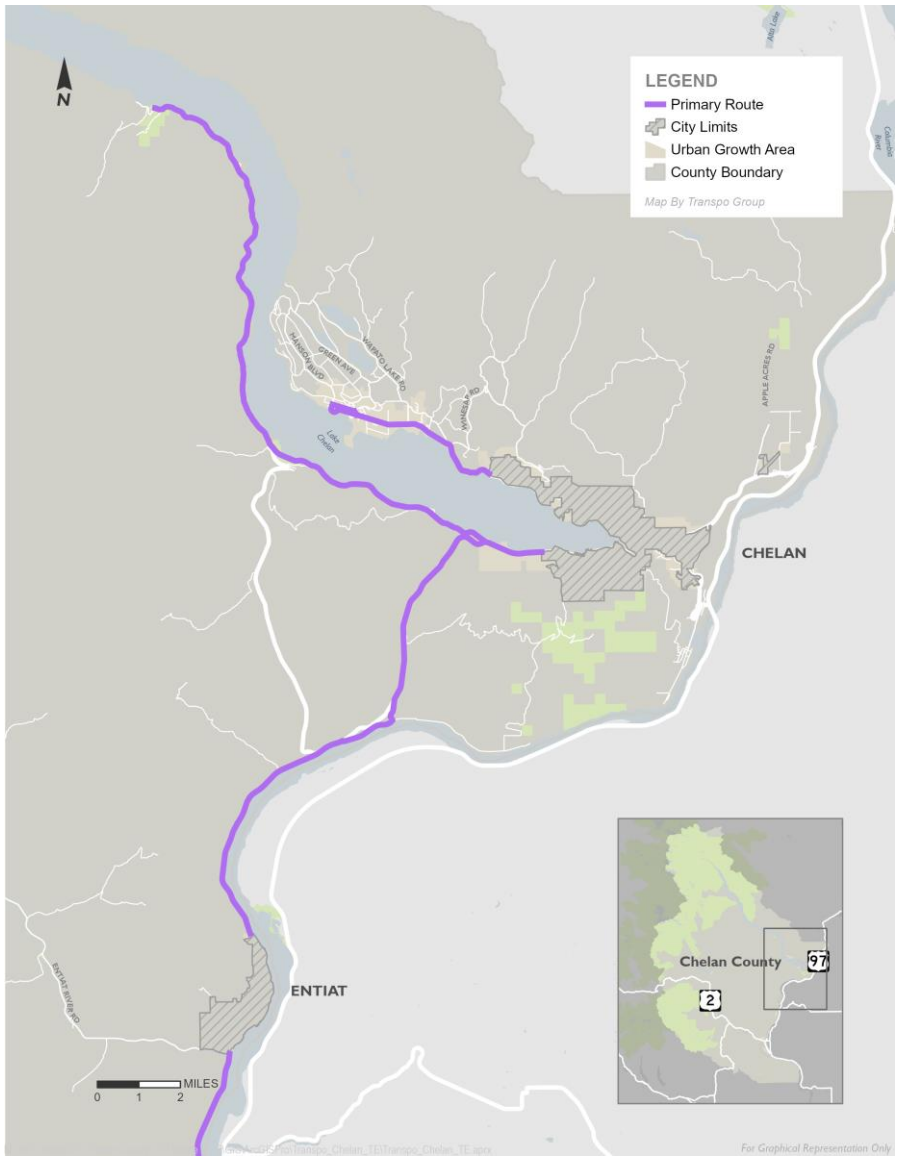

Figure 11-27
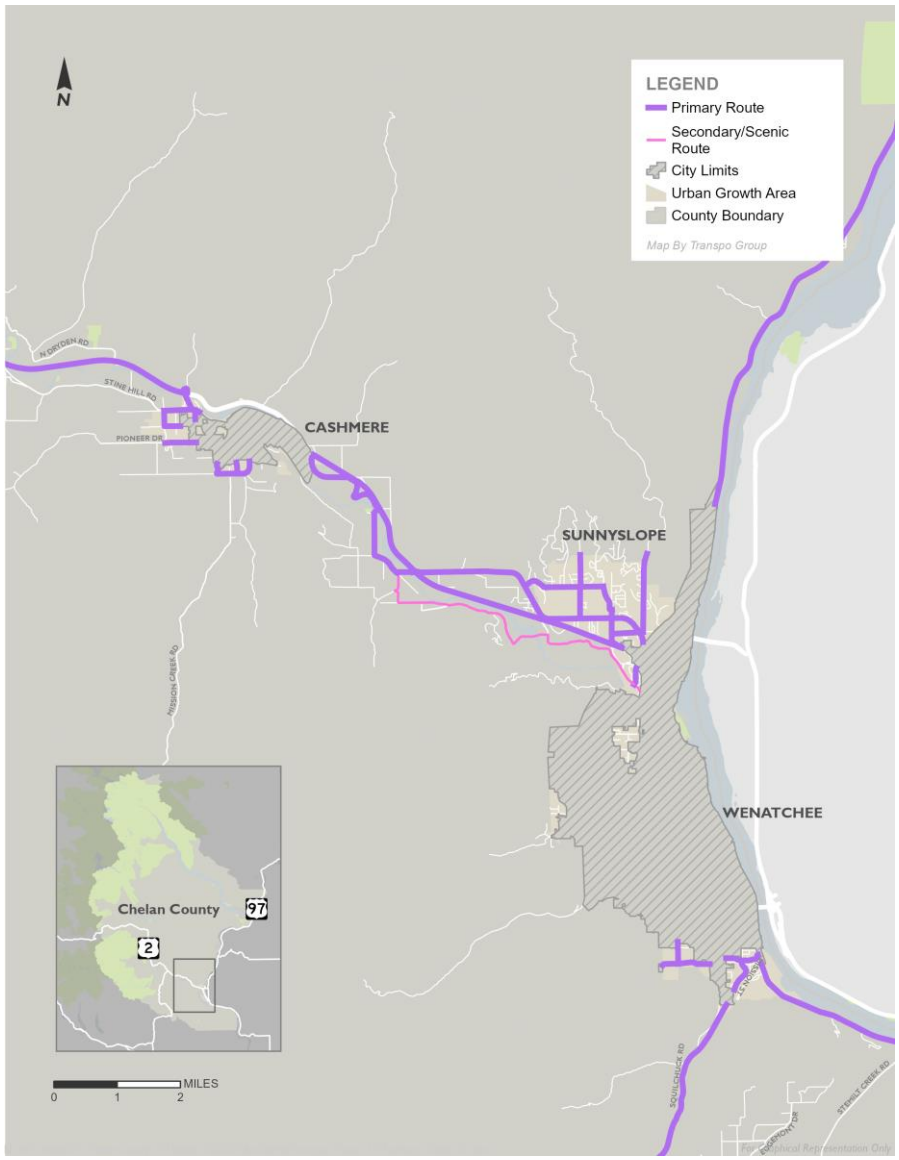
Active Transportation Network (Cashmere, Monitor & Wenatchee Vicinity)



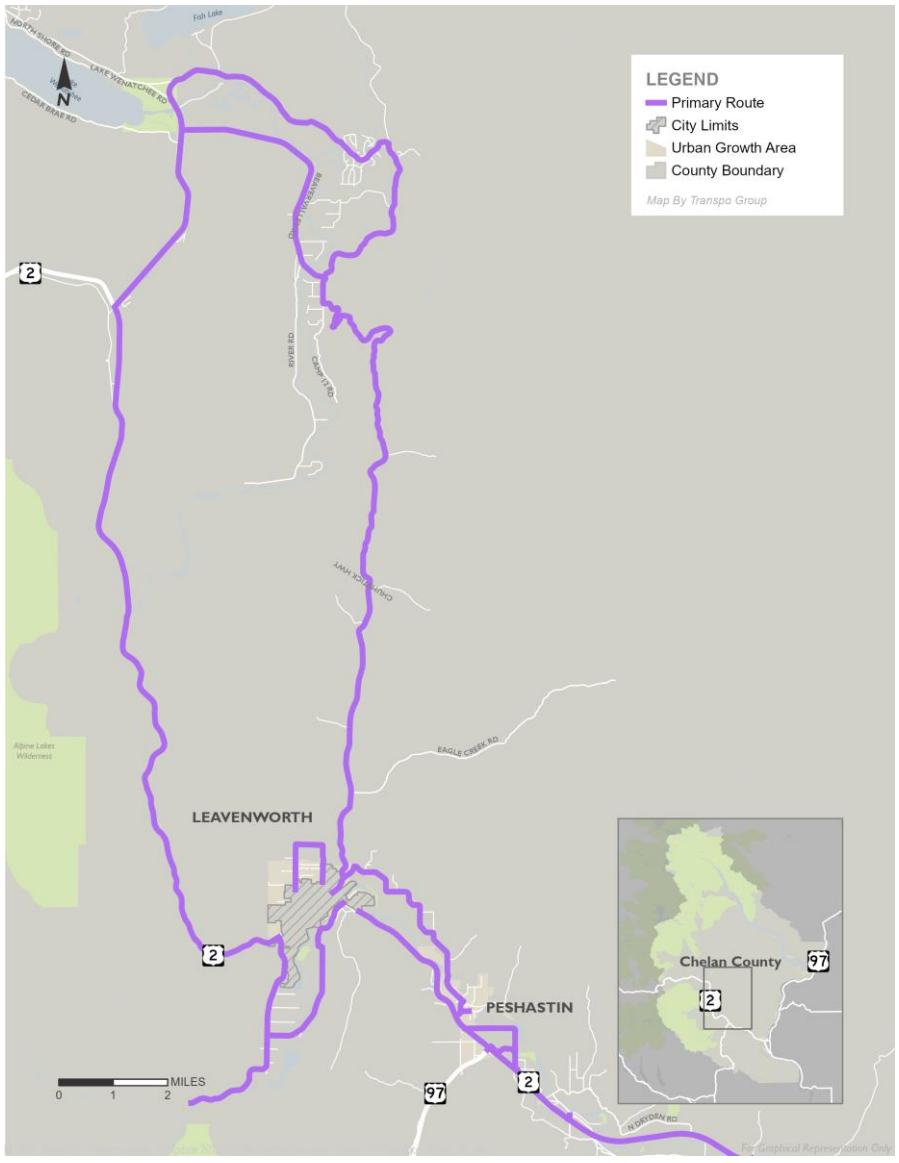


Figure 11-28
Active Transportation Network (Leavenworth, Peshastin, & Plain Vicinity)

The active Transportation LOS standards, shown in Table 11-9, are based on the presence of facilities along planned routes and whether the provided facilities align with the facilities identified in the planned network. Shoulder are the desired facilities for most roadways within the Active Transportation Network, except for the pathway connections from the *Chelan-Douglas Pathways Master Plan* for which a multi-use path is the preferred facility type.

Table 11-9
Active Transportation Level of Service (LOS) Standards

LOS	Rating	Description
	Good	Facilities exist and align with preferred facility type.
	Acceptable	Facilities exist, but not as identified in planned network.
	Poor	No Pedestrian facility or degradation of existing facilities.

Facilities that are aligned with the preferred facility type are considered "good" and indicated by a Green LOS. A Yellow LOS, considered "acceptable", indicates that a pedestrian facility exists, but not as identified in the planned network. For example, if a road connection from the *Pathways Master Plan* currently provides shoulders, it is scored with a yellow/acceptable LOS since it does not provide the multi-use path designated in the plan. Incomplete, missing, and damaged pedestrian facilities are considered "poor" and indicated by a Red LOS.

While the long-term vision for the County would be to achieve a green/good LOS for all active transportation network roadways, an orange/acceptable LOS is the standard. The long-term project list identified in the Transportation Element would implement the orange/acceptable LOS along identified routes. Figures 11-29 through 11-31 present the active transportation LOS evaluation for Chelan County.

Figure 11-29
Active Transportation LOS (Chelan, Manson, & Entiat Vicinity)

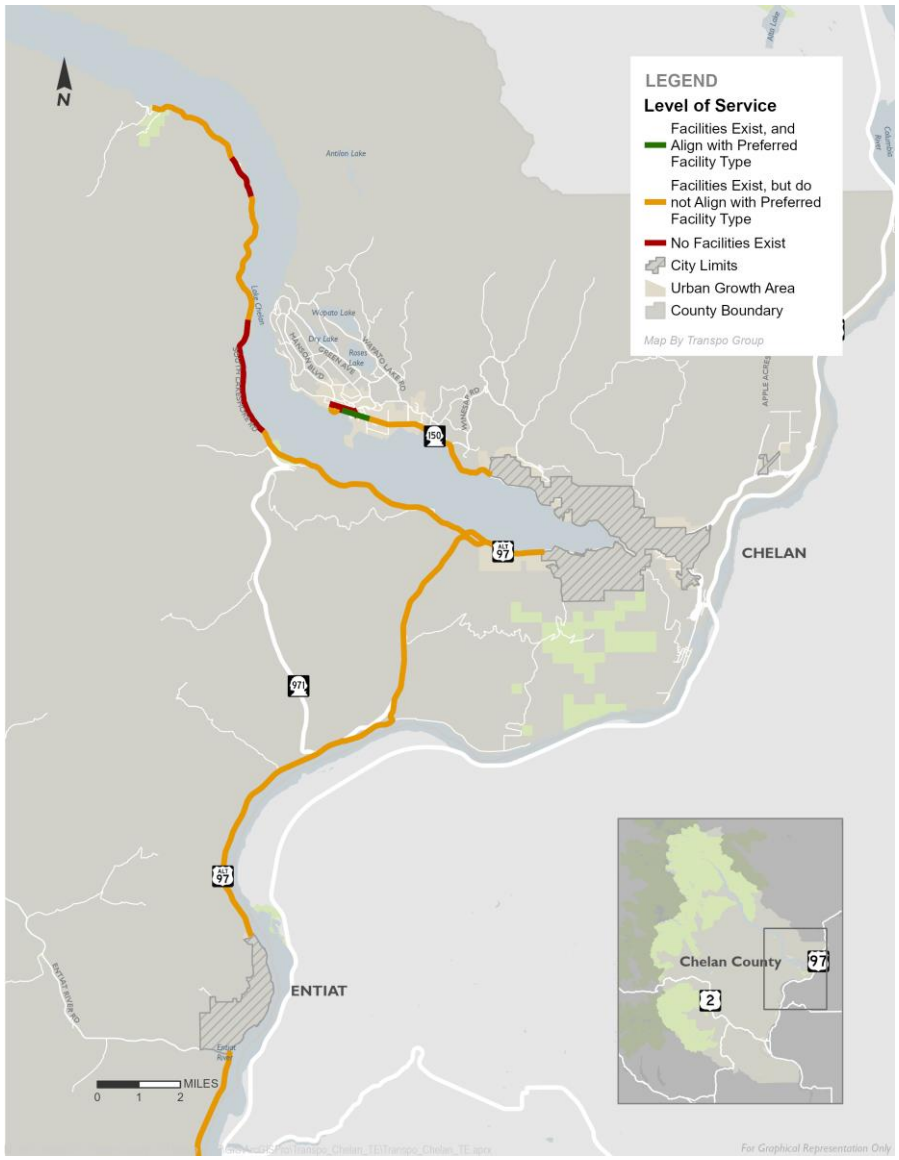

Figure 11-30
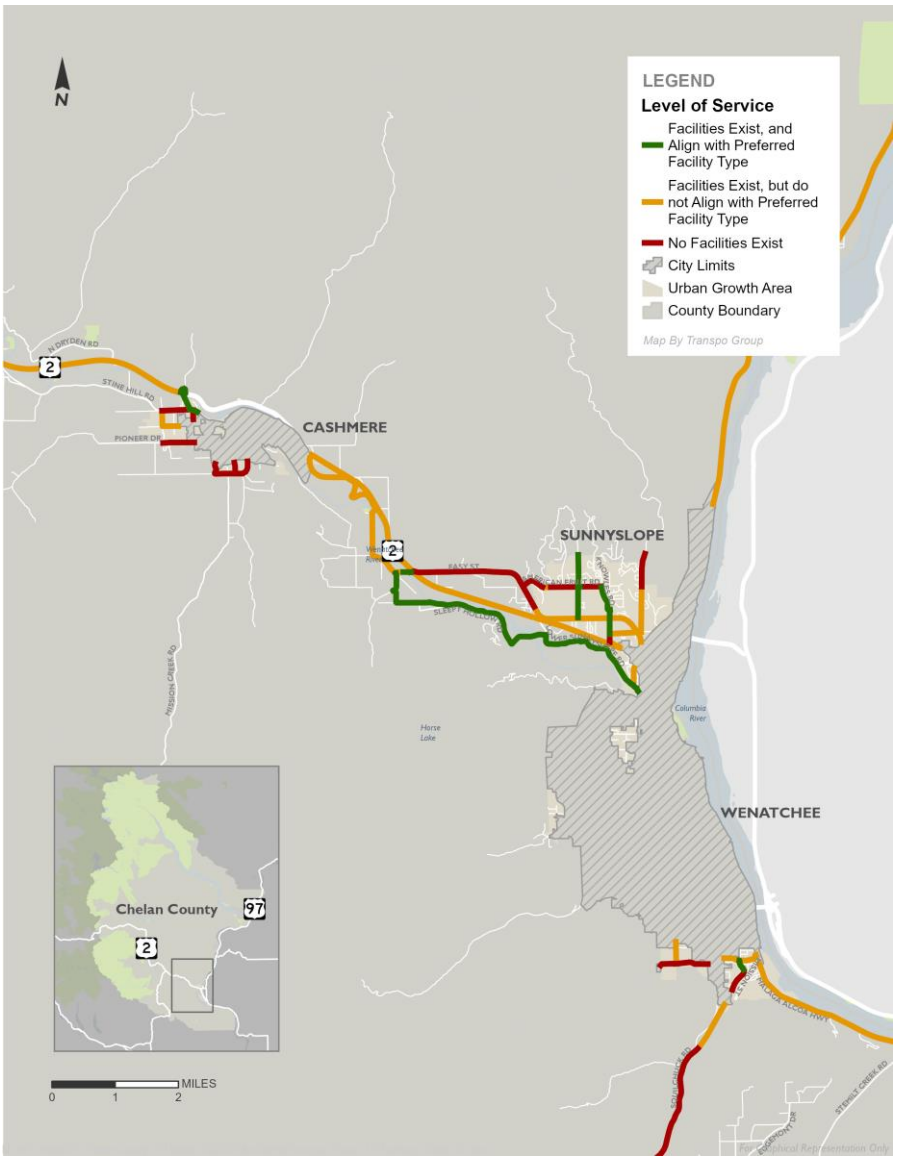
Active Transportation LOS (Cashmere, Monitor & Wenatchee Vicinity)



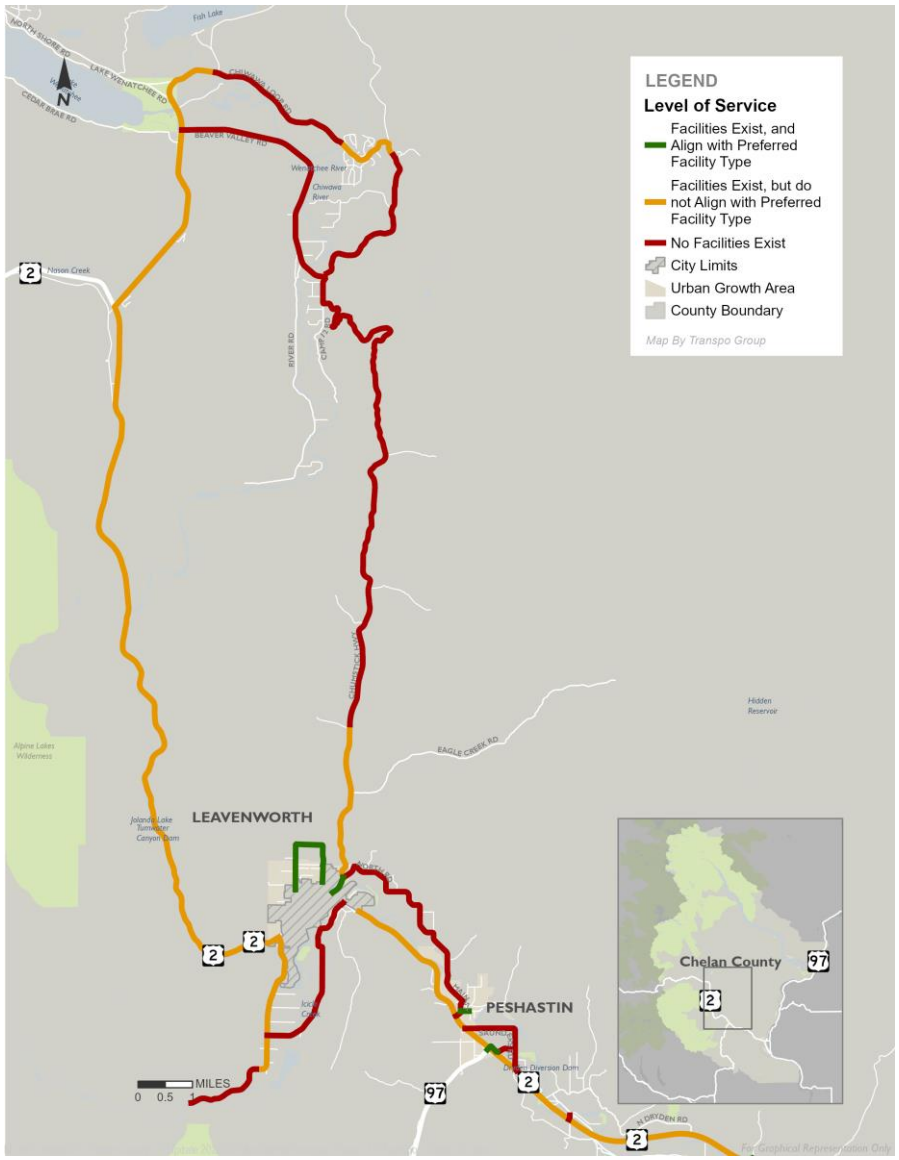


Figure 11-31
Active Transportation LOS (Leavenworth, Peshastin, & Plain Vicinity)

II. Transit

There are six routes currently serving Chelan County. Transit operations throughout the county are managed by Link Transit. Currently, there are nine routes serving county residents but Chelan County can still aim to create an environment that is welcoming to transit. The county will work with Link Transit to identify areas where additional or future service or improvements are needed and assist with transportation accommodation for planned service expansions by working to ensure that these areas are provided with sidewalks and marked crossings that serve planned routes and stops.

Interstate transit service is provided by Amtrak. The county will also assist with transportation accommodation for access to Amtrak and connections to and from its own transportation system.

Table 11-10 shows the county's transit LOS standards. The LOS designations are shown in green, orange, and red and correspond to good, acceptable, and poor LOS, respectively. A green/good LOS indicates a transit stop that has bus stop amenities, sidewalks, and crosswalks serving it. An orange/acceptable LOS indicates a transit stop is missing amenities or sidewalk/crosswalk connections. Transit riders accessing transit stops with an orange LOS may be required to travel out of direction to utilize a crosswalk or walk for a short distance along a shoulder or gravel pathway. A red LOS indicates no designated facilities are provided at or around the transit stops. While the long-term vision for the County would be to achieve a green/good LOS for all transit stops, an orange/acceptable LOS is the standard for existing and planned stops.

Table 11-10
Transit Level of Service (LOS) Standards

LOS		Description
	Good	High-quality stop amenities with sidewalks and marked crosswalks serving stops.
	Acceptable	Missing stop amenities *or* sidewalks/crossings.
	Poor	Missing stop amenities *and* sidewalk/crossings.

As the County implements these level of service standards staff will coordinate with Link Transit. The County should work with Link Transit to plan for and accommodate access to existing and future transit service, including safe pedestrian connection and appropriate accommodation to transit stops and passenger facilities.

III. Freight and Auto

Most trips in Chelan County occur along its roadway network, which serves as the backbone for accessing homes, jobs, and other destinations. Many of these trips occur along low-volume county rural roadways or local streets that do not see significant traffic volumes throughout the day. Similarly, goods movement and delivery vehicles for the many fruit producers and transporters use some corridors frequently while other roadways see only occasional local delivery. As fruit and produce production is a seasonal industry, county roads experience high volumes of freight and auto usage during harvest season.

Table 11-1 (Section 11.2) identifies the functional classification of all roadways. These classes indicate the level of use of each facility for automobiles, specifically in terms of facilitating vehicle and freight mobility as well as other modes.

Figures 11-17 through 11-19 (Section 11.2) specifies the WSDOT freight classification of Chelan County's major roadways that support goods movement. The classifications of these corridors indicate the annual weight of goods that travel on a corridor. The functional classification and freight class of a roadway should guide future investments to ensure a roadway can carry appropriate freight loads.

Chelan County will maintain its current LOS standards roadways (LOS C for rural roads and LOS D for roadways in urban growth areas). Very few areas within the unincorporated parts of Chelan County have operational issues. Most roadways are currently meeting the LOS standard and are still expected to continue meeting that standard over the next 20 years as the county grows. One segment along Easy Street near the US 2 interchange is expected to fall below the LOS D standard. Additional notable segments to monitor include Malaga Alcoa Highway which may fall below the LOS D standard with increased development in the Malaga UGA.

The capital list provided in the next chapter includes future roadway projects that would maintain the county's LOS standard through 2046.

11.6 Capital Plan

This chapter presents the capital program that forms the basis of this transportation element. Collectively, this program adds up to about $264 million in transportation capital improvements to be constructed over the next twenty years.

The components of the transportation program include $248 million for programmatic expenditures which include administration and operations, maintenance, and preservation of the county's transportation infrastructure. Table 11-11 provides a summary of the total expenditures for the 20-year program. Maintaining Chelan County's transportation system is important for sustaining the quality and safety of roadways and is listed as the number one goal for this plan.

Table 11-11
Twenty-Year Transportation Program

Expenditures	Planning Level Costs
Programmatic Expenditures	
Administration and Operations	$65.8 million
Maintenance & Preservation	$181.6 million
Capital Outlay	$0.2 million
Capital	
Capital Projects	$264.0 million
Total	**$511.6 million**

Funding to support this program will come from a number of sources including property tax, fuel tax, Real Estate Excise Tax 2, and state and federal grants, as well as consideration of new funding sources, such as a Levy Lid Lift. Additional detail about funding to support the transportation plan can be found in the following chapter (Section 11.7).

The program was developed to realize Chelan County's goal: to provide a safe, balanced, and efficient multi-modal transportation system that is consistent with the county's overall vision and adequately serves anticipated growth. This vision is guided by the transportation goals outlined in this plan:

- **Goal 1:** Maintain what we have
- **Goal 2**: Safety
- **Goal 3**: Ensure financial viability
- **Goal 4**: Support land use
- **Goal 5**: Environmental stewardship
- **Goal 6**: Be an active partner

The six goals, as well as existing and anticipated needs gathered from countywide planning documents and conversations with stakeholders and the general public form the basis of this project

list. Table 11-12 provides the Chelan County 20-Year Project List, which represents a balance of maintenance, safety, and operational improvements for all modes.

These projects are listed by geographical area and are also mapped in Figures 11-32 through 11-38. These projects provide a starting point for the county in developing its financially constrained Six-Year Capital Improvement Plan, which is updated annually and is developed based on knowledge related to project feasibility and funding availability.

While the scope of the 20-year project list exceeds revenues from exclusive county sources over the next few decades, it has been sized to fit within reasonable assumptions for grants and other outside funding sources. Moreover, projects located in the county that are led by the cities and other agencies such as LINK Transit, CDTC and WSDOT are described at the end of this chapter under Regional Collaboration.

Table 11-12
Twenty-Year Project List

Location/Vicinity	Project ID	Title	Description	Cost
Cashmere/Monitor	CA-1	Binder Rd/Tigner Road	Roadway relocation to support sidewalks and a safe route to school	$1,075,000
	CA-2	W. Monitor Bridge Deck Repair	Bridge deck repair	$520,000
	CA-3	Mission Creek Road	Add shoulders along Mission Creek Road	$460,000
	CA-4	Binder Rd/Mission Creek Rd (Hairpin to Yaksum)	Install sidewalk/widen to provide shoulders	$2,670,000
	CA-5	Monitor Main Street Bridge Replacement	Bridge replacement	$18,700,000
	CA-6	Sunset Highway Sidewalk	Installing sidewalk on north side of Sunset Highway	$1,035,000
	CA-7	Binder Rd – Phase 1 Pedestrian Improvement Project	Intersection improvements (ADA improvements, curb radius reduction, clear sight triangles)	$1,490,000
Cashmere/Monitor Subtotal				**$26,050,000**
Chelan	CH-1	So. Lakeshore Road, Phase I	Resurface and widen shoulders from Navarre Coulee Rd. to So. Lakeshore Rd MP 0.68	$3,800,000
	CH-2	25 Mile Creek Culvert Replacement	Bridge replacement	$2,955,000
	CH-3	Boyd Road	Construct/widen shoulders, construct sidewalks in UGA, upgrade base material, and pave between city limits and Wapato Butte Road	$5,085,000
	CH-4	So. Lakeshore Road, Phase II	Resurface and widen shoulders north of Slide Ridge to Fields Point	$6,345,000
	CH-5	Howard Flats Road Relocation	Roadway relocation to accommodate airport expansion	$500,000

Location/Vicinity	Project ID	Title	Description	Cost
Chelan	CH-6	Union Valley Road	Widen, grade, drain, add base and top course, and pave MP 2.42 to MP 3.63	$350,000
	CH-7	Anderson Road, Phase II	Phase 2: MP 0.28 to MP 0.46	$135,000
Chelan Subtotal				**$19,170,000**
Entiat	E-1	Entiat River Bridges Scour	Scour mitigation on bridges along Entiat River Road	$2,000,000
	E-2	Moe Ridge Bridge	Bridge replacement	$2,620,000
Entiat Subtotal				**$4,620,000**
Leavenworth	L-1	Chumstick Highway, Phase VI	Pavement overlay and add guardrails	$2,285,000
	L-2	Chumstick Hwy / North Road	Intersection reconstruction	$2,255,000
	L-3	North Road	Construct/widen shoulders, improve horizontal curves, signage, and safety	$4,055,000
	L-4	Motteler Road Bridge Replacement	Bridge replacement	$2,620,000
	L-5	Chumstick Highway Rehabilitation	Construct all-weather road and improve some safety elements including spot widening of roadway	$10,000,000
	L-6	Titus Road	Multimodal improvements, illumination, signage, and provide traffic calming	$1,100,000
	L-7	Ski Hill Drive	Multimodal improvements, illumination, signage, and provide traffic calming	$3,900,000
	L-8	Icicle Station Trail with bridge	Shared-use trail connecting downtown to Icicle Station and Valley Trail	$800,000
	L-9	E. Leavenworth Road	Install safety improvements (dynamic speed feedback signs, flashing chevron signage, widen to provide shoulder [where feasible])	$3,575,000

Location/Vicinity	Project ID	Title	Description	Cost
Leavenworth Subtotal				**$30,590,000**
Malaga	MAL-1	Malaga-Alcoa/Stemilt Cr. Rd. Intersection	Malaga-Alcoa Hwy / Stemilt Creek Rd Intersection	$4,120,000
	MAL-2	Dixie Lane	Road widening and pedestrian improvements	$13,000,000
	MAL-3	Saturday Ave	Pedestrian facilities improvements	$1,250,000
	MAL-4	Malaga-Alcoa Highway Improvements	Roadway improvements	$2,200,000
	MAL-5	Malaga Road	Add shoulders along Malaga Road to enhance bike/ped access	$13,100,000
	MAL-6	Malaga-Alcoa Highway Safety Improvements	S Wenatchee Ave to Firehouse Rd	$5,000,000
	MAL-7	Stemilt Cr. Br. 201	Bridge replacement	$5,240,000
	MAL-8	Squilchuck-Alcoa Bridge	Bridge replacement	$6,760,000
	MAL-9	Malaga-Alcoa Hwy Widening	Road widening	$8,000,000
Malaga Subtotal				**$58,670,000**
Manson	MAN-1	Totem Pole Road Phase II	Install bike/ped improvements between Furey Ave to Hill St (Manson High School) - based on findings of the Manson SRTS study	$5,885,000
	MAN-2	Green Avenue	Totem Pole Road to Hill Street	$6,280,000
	MAN-3	Wapato Lake Road	Reconstruction and widening	$2,610,000
	MAN-4	Boetzkes Ave & Quatis St	Intersection improvements	$180,000
	MAN-5	Wapato Lake Rd & Roses Ave	Intersection improvements	$165,000
	MAN-6	SR 150 & Wapato Lake Rd	Intersection improvements to meet future LOS standards	$3,000,000

Location/Vicinity	Project ID	Title	Description	Cost
Manson	MAN-7	Summit Boulevard / Mason Boulevard	Intersection Improvements	$200,000
	MAN-8	Ivan Morse Road	Widen, grade, drain, add base and top course, and pave curve at MP	$300,000
	MAN-9	Grade Creek Road	Road Rehabilitation: repave and upgrade existing shoulders	$690,000
	MAN-10	Pedoi Street Recirculation	Reconfigure existing road to accommodate parking	$100,000
	MAN-11	Trail Access to Water	Open public rights-of-way for public access to Lake Chelan	$100,000
Manson Subtotal				**$19,510,000**
Peshastin	PE-1	Peshastin Main Street Sidewalk	Sidewalk/pedestrian facility improvements from end of bridge to Megelos Street, and along the north side of School Street	$535,000
	PE-2	Peshastin Bridge Replacement	Bridge replacement	$32,800,000
	PE-3	Saunders Road	Add shoulders along Saunders Road	$2,535,000
Peshastin Subtotal				**$35,870,000**
Plain	PL-1	Chiwawa River Bridge Replacement	Bridge replacement	$5,360,000
	PL-2	Beaver Valley Road Shoulder Improvement	Roadway expansion to include shoulders for multi-modal use	$3,615,000
	PL-3	Lake Wenatchee Hwy	MP 0.00 (SR207) to MP 1.20	$2,690,000
	PL-4	Chiwawa Loop, Phase IV	Roadway preservation to address deteriorating pavement	$4,000,000

Location/Vicinity	Project ID	Title	Description	Cost
Plain	PL-5	River Road - milepost 6	Retaining wall and bank improvements	$250,000
	PL-6	Camp 12 Road	Slope stabilization	$1,000,000
	PL-6	Chumstick Hwy & Chiwawa Loop Rd	Intersection improvements (improve sight distance)	$865,000
Plain Subtotal				**$17,780,000**
Wenatchee	W-1	Easy St and School St Intersection	Roundabout	$2,240,000
	W-2	Stemilt Cr. Br. 103 Channel Restor.	Channel restoration	$310,000
	W-3	Squilchuck Rd Improvements, Ph. I	Roadway reconstruction and widen shoulders	$2,690,000
	W-4	School Street	Extend School Street improvements between US 2 and Easy Street - based on findings of future SRTS study (includes mid-block crossing treatments)	$945,000
	W-5	Knowles Road, Phase I	Roadway reconstruction, add shoulders and sidewalks	$2,600,000
	W-6	American Fruit Road	Roadway Improvements	$1,720,000
	W-7	Boodry/S. Wenatchee Ave Imp.	Malaga-Alcoa Intersection to Squilchuck Creek Bridge	$3,495,000
	W-8	Peters Street	Widening and reconfiguration	$1,000,000
	W-9	Easy Street/Peters Street	Intersection Improvements	$2,500,000
	W-10	Easy St/Crestview St	Intersection Improvements	$2,500,000
	W-11	S. Wenatchee Avenue	SRTS improvements along Boodry St - based on findings of the S Wenatchee SRTS study	$1,500,000
	W-12	Easy St - Phase 1 Pedestrian Improvement Project	Pedestrian facility improvements (multi-use path and sidewalks)	$2,040,000

Location/Vicinity	Project ID	Title	Description	Cost
Wenatchee	W-13	Easy St - Phase 2 Pedestrian Improvement Project	Update roadway to Urban Minor Arterial Standard (with sidewalks, bike lanes, left turn pockets)	$8,395,000
	W-14	Burch Mountain Road Bikeway	Fille sidewalk gaps and restripe existing shoulder as designated bike lane	$1,700,000
	W-15	Circle Street	Fill sidewalk gaps	$3,900,000
	W-16	Mission St & Terminal Ave	Intersection improvements and install sidewalk connections	$330,000
	W-17	Mission Ridge	Mill/Fill and rebuild wall failure	$2,000,000
	W-18	Squilchuck Rd Improvements, Ph. II	Roadway reconstruction and widen shoulders	$2,500,000
	W-19	Squilchuck - Terminal to City Limits	Improve roadway to Urban Minor Arterial standard (w/ sidewalks, bike lanes)	$2,500,000
	W-20	Squilchuck Rd Passing Lane	Pavement preservation and concrete barrier replacement	$1,500,000
	W-21	No. 2 Canyon Rd FDR	Roadway Improvements	$2,000,000
	W-22	No. 2 Canyon Rd Primitive	Upgrade/pave gravel road section	$2,000,000
	W-23	Stemilt Hill Slope Stabilization	Stabilize hillside slopes	$1,000,000
	W-24	Whispering Ridge-Monitoring	Monitor roadway and traffic conditions	$60,000
	W-25	Sunnyslope	Update subarea plan to incorporate new growth assumptions and revise planned transportation network (includes new connection to US 2)	$150,000
	W-26	West Wenatchee (new circulation areas)	Update subarea plan to incorporate new growth assumptions and revise planned transportation network	$150,000
Wenatchee Subtotal				**$51,725,000**

Location/Vicinity	Project ID	Title	Description	Cost
GRAND TOTAL				**$263,985,000**

I. Regional Collaboration

As stated earlier, one of the county's main goals in this plan is effective coordination with other agencies to ensure that the local and regional transportation systems complement one another. A key element of this will be partnering with cities, neighboring counties, WSDOT, LINK Transit, and other agencies to ensure a cohesiveness in transportation planning throughout the county.

Other Regional Projects

There are projects outside of county jurisdiction that will impact travel through Chelan County. These projects are listed below in Table 11-13. These projects range from highway intersection improvements to bicycle and pedestrian access projects. These projects include long-term vision projects for the region identified as part of transportation planning studies conducted by CDTC or other agencies.

Table 11-13
Regional Vision Projects

Lead Agency	Location	Title	Description
WSDOT	Peshastin	US 2 Express Bus Access	Relocate Peshastin bus stop to shoulders of US 2 and construct bicycle and pedestrian bridge
Leavenworth/ WSDOT	Leavenworth	US 2 Streetscape Improvements	Reconfigure US 2 from Ski Hill to River Bend Drive (reconfigure lanes, upgrade signals, shared use path)
Leavenworth	Leavenworth	Chumstick Highway to River Bend Drive Connection	Construct a bridge across the Wenatchee River, intersection with Chumstick Hwy and improvements to River Bend Dr.
Leavenworth/ WSDOT	Leavenworth	US 2 Undercrossing	Construct US 2 undercrossing near Leavenworth Park and Ride
Leavenworth	Leavenworth	Parking Management Strategies	Implement strategies identified as part of the Downtown Leavenworth Parking Management Plan
CDTC	County	Columbia River Crossing Study	Evaluate potential for an additional Columbia River bridge crossing, and construct the identified crossing improvements (e.g., new bridge or a widened/improved bridge)
CDTC	County	Chelan to Manson Corridor	Construct MUP connecting Big Horn trail system to downtown Manson

Lead Agency	Location	Title	Description
CDTC	County	Leavenworth to Cashmere to Wenatchee Corridor	Construct MUP connecting downtown Leavenworth to Apple Capital Loop Trail
CDTC	County	Malaga to Wenatchee Corridor	Construct MUP connecting Apple Capital Loop Trail to Waterfront Park in Malaga

Note:
*All of the recommended transportation projects in Table 11-13 will require further analysis prior to actual construction

One of the major projects in the county is the Confluence Parkway project, which started construction in March of 2025. Throughout 2025 significant progress was made on the Phase 1 construction. The McKittrick Street Underpass site was cleared for development in coordination with Chelan PUD, and the foundation and girders were installed on time and within the projected budget. Additionally, the North Miller Street Overpass site underwent demolition near North Miller Business Park, and construction of the overpass foundation and girder installment was initiated. Recent escalation in construction and property costs has made the project's available funding inadequate. To mitigate the effects this might have on the project, the City of Wenatchee plans to prioritize securing right-of -way for the project north to US-2 with currently available funding, allowing for the remainder of the project to be shovel-ready as additional funding is acquired.

Another major project that is being discussed is the *Chelan-Douglas Pathways Master Plan*. This project plans to provide safe active transportation connections between communities in Chelan and Douglas Counties. Of the four corridors proposed, the following three are proposed for Chelan County:

- Chelan to Manson Corridor
- Leavenworth to Cashmere to Wenatchee Corridor
- Malaga to Wenatchee Corridor

The corridors will provide opportunities to connect local parks, trails, transit, and urban areas through the installation of pedestrian and bicycle friendly multiuse paths. CDTC envisions this project will enhance the region's safety, community, and livability.

One of the major projects that has been discussed throughout the region is the construction of an additional crossing of the Columbia River. In 2024, the CDTC commissioned the *Columbia River Crossing Study* to evaluate the potential bridge locations for an additional crossing between Chelan and Douglas Counties. This study represents an initial step to identifying a solution for addressing

congestion and improving freight connectivity across the Columbia River. While a bridge project is not included on the project list in the Transportation Element, Chelan County will continue to work with regional partners to identify the preferred long-term solution to improving cross-river connectivity. While additional planning and analysis of a potential future bridge continues, the CDTC is conducting analysis of the George Sellar Bridge (SR 285) and associated ramp connections to determine if near-term improvements can address congestion along the bridge until a long-term solution is identified.

As part of this planning process, several transportation issues or performance gaps were identified through stakeholder meetings, meetings with county staff and project development that fall outside of county authority. These issues or performance gaps require cooperation between multiple agencies and increased regional collaboration will lead to more effective transportation systems throughout the county.

WSDOT

WSDOT supports multimodal integration into projects and planning multi-agency and community network interconnectivity. The state system provides access to key destinations within the county, so WSDOT will partner with Chelan County to ensure that both agencies' needs and concerns are addressed.

Transit Facilities

On the transit side, Link Transit is working to improve transit service and facilities within the county. Link Transit has several goals for their future, the most important being to create a long-range plan to examine needs and resources. The county supports Link Transit's near-term goals and objectives, as outlined in Transit Development Plan 2025 and coordinates with the agency to identify how transit needs should be addressed, particularly as new development occurs. County staff will continue to work closely with Link Transit staff to provide transportation facilities which provide connectivity to existing and planned bus stops.

U.S. Forest Service

The USFS owns and maintains roads throughout the Okanogan-Wenatchee National Forest which covers a majority of Chelan County. Maintenance and repairs are necessary to provide access to popular recreation destinations. USFS provides grant funding for roads designated as Forest Highways which provide access to Forest Lands. Several Chelan County roads have this designation: Chumstick Highway, Eagle Creek Road, Chiwawa Loop Road, South Lakeshore Road are a few.

Okanogan-Wenatchee National Forest (Source: USFS)

11.7 Implementing the Transportation Element

I. Introduction

This chapter considers Chelan County's funding picture over the next 20 years to ensure that the recommendations made as part of this Transportation Element can be implemented.

Background and Context

This implementation plan is an update of the funding strategy developed as part of the Transportation Element update process in 2017. For that effort, the County established three principles to guide future funding strategies:

- Reserve regional funding sources for operation and maintenance of existing county-wide transportation facilities.
- Direct funding sources to projects (or categories of projects) that best relate the funding for those projects to their primary beneficiaries.
- Require new development to pay its fair share of expanding/upgrading transportation facilities in the County

In addition, any funding strategy must balance those goals against developing sustainable revenue sources that are feasible for the County to implement. This is even more pressing given the limited

means counties have at their disposal for raising revenue. Over recent decades, a combination of statewide initiatives and legislative actions has altered the landscape for local governments. The most sweeping changes have revolved around voters' decisions to (1) end the Motor Vehicle Excise Tax and (2) create strict limits on the growth of property taxes.

Across Washington State, the effect of these actions has varied by jurisdiction. Cities and local service providers, like counties, are facing increasing difficulty given their continued reliance on the property tax. Washington's counties are different from cities and special service districts in fundamental ways. These differences are brought into stark relief by considering the interplay of four factors:

- Counties face strict limits on their taxing authority.
- Counties are heavily reliant on property taxes, whose purchasing power is eroding due to Initiative 747, explained in Section III.
- Counties face a long list of regional service obligations that are mandated by the state.
- Counties have a complex set of relationships with multiple constituencies:
  - They collect *regional taxes* and provide *regional services* for all constituents in the county.
  - They collect *local taxes* and provide *local services* to unincorporated areas.

Given this combination of factors, Washington's counties have found themselves squeezed between two positions. They have a long list of service obligations that are non-negotiable with few statutory options for securing new revenue streams, and they face structural erosion in their most important revenue source. As they look to the future, Washington's counties face a fundamental, structural challenge—a challenge that will become increasingly unmanageable over time. Chelan County is no exception and this larger systemic issue must be considered as part of their long-term transportation funding strategy.

II. Approach

Data Sources and Methodology Historical Revenues and Expenditures

The data used to summarize historical revenues and expenditures comes from Chelan County transportation revenues and expenditures for FY 2021 to 2025. The data comes from annual reporting to the Federal Highway Administration using a standard report that uses Budgeting, Accounting, and Reporting System codes to standardize the data among all reporting counties and

cities. This standardization, along with the availability of significant longitudinal data, makes this data set excellent for this kind of revenue analysis.

Projected Revenues and Expenditures

Future revenues and expenditures were projected on a per resident basis using the compound annual growth rates imputed from 10-year historical averages. Where there were outliers, inflation was used to override the compound annual growth rates. These projections are made on a per resident basis to reflect growth in revenue anticipated from growth in population. The land use projections from the Land Use Element were used to represent expected population growth.

These projections are intended to be both conservative and planning-level. Additionally, this projection methodology is intended to estimate the overall revenues collected over the 20-year planning period – it is not intended to estimate the revenues that might be collected in any given year.

Data Presentation

This section presents the data used to evaluate Chelan County's current and future financial position as it relates to transportation funding. This analysis is provided at a high level, in 2025 dollars, and rounded to communicate their only order-of-magnitude precision and in 2025 dollars.[53]

III. Baseline Financial Capacity

Transportation Revenues

Historical Transportation Revenues

Over the last 10 years there have been six main sources of revenues available for transportation projects in Chelan County:

- Federal Revenues
- Property Taxes
- State Fuel Tax Distributions
- Other State Funds
- Other Local Receipts

[53] Projected numbers are rounded to the nearest $10,000. All of the fiscal data throughout this section is provided in 2025 dollars (2025$).

- General Fund Appropriations

Chelan County's total transportation revenues, including the revenues collected from each of these sources are provided in Table 11-14.

Table 11-14
Historical Transportation Revenues, 2021 to 2025

	2021	2022	2023	2024	2025	Annual Average	Total
Federal Revenues	$8,232,590	$8,048,940	$2,672,845	$3,109,604	$1,196,919	$4,652,180	**$27,913,078**
Property Taxes	$8,331,128	$8,339,204	$8,847,676	$8,885,271	$9,637,134	$8,808,082	**$44,040,412**
State Fuel Tax Distributions	$2,298,488	$2,194,521	$2,182,743	$2,294,563	$2,092,764	$2,212,616	**$11,063,079**
Other State Funds	$2,689,670	$1,920,858	$3,189,371	$1,790,480	$596,215	$2,037,319	**$10,186,593**
Other Local Receipts	$567,325	$2,175,929	$655,675	$633,118	$418,415	$890,092	**$4,450,462**
General Fund Appropriations	$700,000	$700,000	$700,000	$700,000	$700,000	$700,000	**$3,500,000**
Total	**22,819,201**	**23,379,452**	**18,248,309**	**17,413,035**	**14,641,447**	**19,300,289**	**$101,153,624**

Baseline Revenues for Transportation

To estimate Chelan County's financial capacity for transportation over the 20-year planning program, revenues are projected based on current financial policies. In this case, that means projecting available revenues based on the County's six current transportation funding sources.

Current Source 1: Federal Revenues

Federal transportation grants are funded through the federal portion of the Fuel Excise Tax. The federal gas tax rate has fluctuated between $0.183 and $0.184 per gallon since 1994. The majority of these funds are deposited into the Highway Trust Fund and disbursed to the states through the Highway and Mass Transit Accounts.

Federal transportation grants are awarded through a competitive process, and, therefore, not guaranteed. Historical data can provide a window into Chelan County's past success in obtaining a share of these funds. While Chelan County's total revenues remained steady through 2021 and 2022, the later years showed a drop in federal grants. For this analysis, it was conservatively estimated that federal revenues will remain flat over the 20-year planning period at the 5-year annual average.

Current Source 2: Property Tax

Property taxes are used by counties and cities as one primary transportation funding source. The county road levy is a property tax collected by Chelan County for transportation funding.

Over the 20-year planning period, revenues from the county road levy (property taxes) are expected to make up the majority of available funds for roadway maintenance and transportation projects. While most cities and counties are seeing a decline in property tax purchasing power, Chelan County's growth assumptions are sufficient to maintain a very slight increase in property tax revenue over the planning period.

Current Source 3: State Fuel Tax Distributions

Although historical per capita fuel tax dollars have been increasing in nominal numbers, when adjusted for inflation it is clear that per capita revenues have been declining over time. This trend is becoming more pronounced in very recent history due to large increases in the price of gasoline and a significant shift toward more fuel efficient vehicles.

Chelan County's state fuel tax distributions are expected to continue to decline over the 20-year planning period, for the reasons mentioned above. It is unknown whether this trend will level off. However, it is worth noting that there is significant statewide concern regarding the long-term

viability of fuel tax as the fleet mix continues to shift toward ever more fuel efficient vehicles and automakers focus on meeting the new Corporate Average Fuel Economy standards. The state legislature has conducted several studies to explore options to replace the gas tax, but no new funding packages have yet been approved. In looking forward, there will continue to be uncertainty around revenues from this tax source.

Current Source 4: Other State Funds

This category is primarily state grants, like those from the Department of Ecology; Urban Arterial Board; Transportation Improvement Board; Department of Community, Trade, and Economic Development; and WSDOT. Other funds in this category may include state county road administration board (CRAB) funding including the county arterial preservation account (CAPA) fund allocations and other state grants, including those from the traffic safety commission.

Like federal grants, state grants are a particularly volatile funding source, so changes in Washington state legislative administration could lead to changes in policy that affect future projections. Therefore, it is difficult to predict the magnitude of revenues to expect from this funding category.

Current Source 5: Other Local Receipts

Local sources of transportation funding include several miscellaneous sources like impact fees and transfers-in for distressed counties. They also include a number of fees or other reimbursements collected by Public Works, including from the sale of maps and publications, for engineering services, for road and street maintenance services, and reimbursements from utilities or related to construction projects.

Current Source 6: General Fund Appropriations

Because general fund revenues have few restrictions on how they are spent and the County has a dedicated county road levy for transportation, it is relatively unusual for these funds to be used for transportation purposes. In recent history, Chelan County has appropriated approximately $700,000 per year to transportation.

These dollars are primarily made up of Real Estate Excise Tax 2 (REET 2) funds. Historically, this has been a volatile source of funding for transportation in the county, with consistent divestment of these funds from that purpose, and, therefore, has contributed a relatively small share of total revenues for transportation.

Total Baseline Revenues for Transportation

Table 11-15 shows the expected baseline revenues for transportation based on projections for the County's sources of transportation revenue described above.

Based on current transportation funding policies the County expects approximately $457 million in transportation revenues between 2025 and 2045.[54]

Table 11-15
Total Baseline Revenues for Transportation, 2026 to 2045 (2025$)

	2026-2031 (Years 1-6)	2032-2035 (Years 7-10)	2036-2045 (Years 11-20)	2026-2045 (Years 1-20)
Federal Revenues	$27,900,000	$18,600,000	$46,500,000	$93,000,000
Property Taxes	$56,080,000	$43,180,000	$133,210,000	$232,470,000
State Fuel Tax Distributions	$14,310,000	$11,040,000	$34,020,000	$59,370,000
Other State Funds	$12,240,000	$8,160,000	$20,400,000	$40,800,000
Other Local Receipts	$5,340,000	$3,560,000	$8,900,000	$17,800,000
General Fund Appropriations	$4,200,000	$2,800,000	$7,000,000	$14,000,000
Total	**$120,070,000**	**$87,340,000**	**$250,030,000**	**$457,440,000**

Source: Transpo Group 2026.

Transportation Programmatic Expenditures

Transportation spending falls in two main categories: programmatic and capital. Capital expenditures for transportation are mainly from construction of new facilities, such as roads, sidewalks, and traffic signals. The County also has significant programmatic costs for running its existing system, including administration, operation, maintenance of existing facilities, preservation, and capital outlay, which account for the majority of its regular expenditures. More specifically, programmatic expenditures support things like pavement improvement, bridge retrofitting and rehabilitation, and other roadway elements, like guardrails, signs, concrete barriers, and pedestrian and drainage facilities.

[54] These projections are conservative and planning level.

Historical Transportation Programmatic Expenditures

There are three categories of activities in transportation programmatic expenditures:

- **Administration and Facility Operations.** General administration covers public works transportation administration and support. Operations accounts for engineering and planning services that support transportation capital projects.
- **Maintenance and Preservation.** Routine improvements or activities to ensure facility utility.
  - **Maintenance:** includes pothole repair, snow/ice control, street cleaning, etc.
  - **Preservation:** includes pavement overlays, seal coating, bridge repairs, etc.
- **Capital Outlay for Facilities.** Costs of building and maintaining facilities that support the transportation program.

Chelan County expenditures for each category between 2021 and 2025 are shown in Table 11-16.

Table 11-16
Historical Transportation Programmatic Expenditures (2021-2025)

	2021	2022	2023	2024	2025	Total
Administration and Facility Operations	$2,880,664	$3,565,190	$3,368,296	$3,009,239	$3,604,825	**$16,428,214**
Maintenance and Preservation	$7,966,811	$9,052,222	$9,424,529	$11,159,930	$7,782,809	**$45,386,300**
Capital Outlay for Facilities	$ -	$25,121	$23,121	$ -	$ -	**$48,242**
Total	**$10,847,475**	**12,642,533**	**$12,815,946**	**$14,169,169**	**$11,387,634**	**$61,862,757**

Source: Chelan County Public Works

Baseline Programmatic Expenditures for Transportation

This baseline projection for transportation programmatic expenditures estimates the costs of providing the same services that occurred during the historical period (2021 to 2025).

Table 11-17
Total Baseline Programmatic Expenditures for Transportation, 2026 to 2045 (2025$)

	2026-2031 (Years 1-6)	2032-2035 (Years 7-10)	2036-2045 (Years 11-20)	2026-2045 (Years 1-20)
Total Revenue	**$120,070,000**	**$87,340,000**	**$250,030,000**	**$457,440,000**
Administration and Facility Operations	$19,740,000	$13,160,000	$32,900,000	$65,800,000
Maintenance and Preservation	$54,480,000	$36,320,000	$90,800,000	$181,600,000
Capital Outlay for Facilities	$60,000	$40,000	$100,000	$200,000
Total Programmatic Expenditures	**$74,280,000**	**$49,520,000**	**$123,800,000**	**$247,600,000**
Revenue Remaining for Capital Projects	**$45,790,000**	**$37,820,000**	**$126,230,000**	**$209,840,000**

Source: Transpo Group 2026.

Baseline Financial Capacity for Transportation

Using these projections, a baseline picture was generated of the average annual revenue availability based on current financial policies for the next six and 20 years.

Based on revenue projections, approximately $209.8 million will be available for transportation programs and projects beyond current activities during the planning horizon, as shown in Table 11-17.

However, it is important to also consider the flexibility of revenue sources, including statutory restrictions limiting funding for either programmatic or capital purposes. Some of the county's transportation revenue sources are specifically earmarked for capital purposes. These include REET 2, state revenues (grants), federal revenues (grants), and any maintenance of effort or matching funds to support those grants (an average of about 20% per grant). To fully illustrate funds that may be restricted to capital, we estimated the expected maintenance of effort and matching funds for grants

by multiplying the total grant amount by 20%, as it is expected that those amounts will average about 20%.

With these statutory restrictions in funding, approximately $282 million is available to cover the $248 million needed for programmatic expenditures, as shown in Table 11-19. This provides a surplus of approximately $35 million which can be allocated to capital projects in addition to the almost $174 million statutorily restricted for capital projects. However, this amount of capital funding would not cover the $264 million in capital project costs identified in the previous section.

Table 11-19
Baseline Transportation Financial Capacity with Consideration of Fund Restrictions, 2026 to 2045 (2025$)

	2026-2031 (Years 1-6)	2032-2035 (Years 7-10)	2036-2045 (Years 11-20)	2026-2045 (Years 1-20)
All Future Revenues				
Federal Revenues	$27,900,000	$18,600,000	$46,500,000	$93,000,000
Property Taxes	$56,080,000	$43,180,000	$133,210,000	$232,470,000
State Fuel Tax Distributions	$14,310,000	$11,040,000	$34,020,000	$59,370,000
Other State Funds	$12,240,000	$8,160,000	$20,400,000	$40,800,000
Other Local Receipts	$5,340,000	$3,560,000	$8,900,000	$17,800,000
General Fund Appropriations	$4,200,000	$2,800,000	$7,000,000	$14,000,000
Total Revenues	**$120,070,000**	**$87,340,000**	**$250,030,000**	**$457,440,000**
Capital Only Funds				
Federal Revenues (Grants)	$27,900,000	$18,600,000	$46,500,000	$93,000,000
Other State Funds (Grants)	$12,240,000	$8,160,000	$20,400,000	$40,800,000
General Fund Appropriations (REET 2)	$4,200,000	$2,800,000	$7,000,000	$14,000,000
20% Local Grant Match	$8,030,000	$5,350,000	$13,380,000	$26,760,000
Total Available for Capital (Restricted)	**$52,370,000**	**$34,910,000**	**$87,280,000**	**$174,560,000**
Total Available for Programmatic Expenditures	**$67,700,000**	**$52,430,000**	**$162,750,000**	**$282,880,000**

IV. Balancing Financial Capacity with Future Funding Needs

When comparing total available revenues for transportation with expected maintenance costs over the 20-year study period, revenues are expected to cover the current estimated programmatic costs, before considering policy changes that would increase those programmatic costs. Nevertheless, funding allocated for capital projects is expected to fall short of the $264 million estimated in the Transportation Element project list. Although programmatic spending is expected to be balanced, the changes in revenues or increased maintenance or preservation costs have the potential to lead to costs outpacing the increase in revenues.

There are two main types of strategies that can be used to balance this implementation plan:

1. **Increase revenue,** through increases in existing funding tools or implementation of new tools.
2. **Decrease expenses** by decreasing programmatic activities or further prioritizing capital projects.

Significant use of the latter strategy was used in the development of this plan.

Options for Reducing a Funding Shortfall for Capital Improvement Projects

The county can increase funding for capital street projects using a range of revenue options. These include partnering with other agencies to pursue additional grants and the implementation of additional revenue sources. Alternatively, the county could delay implementation of projects, especially lower priority improvements. Possible applications of these funding strategies are discussed below.

Delaying Improvement Projects

The county may not be able to, or may choose not to, fund lower priority projects within the 20-year horizon without additional funding sources. Some of these projects may be funded through impact fees and/or frontage improvement requirements as development (or re-development occurs). As developments occur in these areas the County may require project-specific facility improvements

including SEPA mitigation measures, as appropriate. The County also may identify other programs or opportunities to partially or fully fund some of these improvements.

Additional Grants and Other Agency Funding

As discussed above, the transportation financing analysis assumes that the county will receive $134 million in grant funding over the life of the plan. If the County can pursue and receive grants at a higher rate than identified based on the County's historic annual average, revenues would increase over the life of the plan. It should be noted, however, that some state and federal grant programs require local matching funds to be provided, which may limit some sources of grant funding.The Transportation Element has a range of improvement projects that should be competitive for grant funding, especially the Regional Vision projects identified in Table 11-13. The GMA requires the Transportation Element to identify these needs to facilitate coordination between the local and state transportation planning efforts. The County will continue to work with WSDOT, CDTC and other local, regional and state agencies to develop strategies for funding and implementing these improvements. Given the scale of these improvements, direct appropriations from the federal or state government as part of legislative requests may be necessary to fully implement the improvements.

Additional Local Revenue Sources

The county can consider a range of funding alternatives to raise additional revenues to pay for transportation improvements. Potential revenue sources for consideration are summarized in Table 11-20.

Table 11-20
Potential Transportation Revenue Sources

Funding Alternative	Description
Road Levy Lift / Street Levy	Property tax increase to fund transportation maintenance and capital projects. Require voter approval by simple majority.
Transportation Benefit District	Vehicle license fee or sales tax increase to fund transportation maintenance and capital projects. Maximum of 0.3% sales tax with voter approval, governing body may approve up to 0.1% sales tax. License fees can be no greater than $100 with voter approval, but governing bodies can adopt $20 fee, then raise it up to $40 after 2 years, then to $50 2 years later.

Funding Alternative	Description
Transportation Impact Fees	One-time charges assessed on new development to help pay for transportation improvements needed to accommodate growth.
Late-comer Agreements	Allows a developer who constructs public infrastructure with excess capacity to recover a portion of those costs from future properties that benefit from the improvement.
Local or Road Improvement District	A financing mechanism used to fund specific public improvements that provide a special benefit to nearby properties.
Planned Action Ordinance	Could be used to set-up mitigation payments, impacts fees, or tax increment financing for specific areas of growth.
Local Option Fuel Tax	Counties or cities may, with voter approval, levy a local option motor vehicle fuel tax for local transportation purposes. The maximum rate is 10% of the state rate.

Reassessment Strategy

Although the financing summary identifies the potential for a total capital revenue shortfall over the life of the Transportation Element, the county is committed to reassessing their transportation needs and funding sources each year as part of its Six-Year Transportation Improvement Program (TIP). This allows the county to match the financing program with the short-term improvement projects and funding. To implement the Transportation Element, the county will consider the following principles in its transportation funding program:

- Balance improvement costs with available revenues as part of the annual Six-Year Transportation Improvement Program (TIP);
- Review project design standards to determine whether costs could be reduced through reasonable changes in scope or deviations from design standards;
- Fund improvements or require developer improvements as they become necessary to maintain LOS standards;
- Coordinate and partner with WSDOT, CDTC, Link Transit, and others to implement multimodal transportation improvements;
- Vigorously pursue grant funds from state and federal sources;
- Work with CDTC, the City of Wenatchee or other partner agencies to develop multiagency grant applications for projects which extend between both jurisdictions that serve city and county growth;

Some lower priority improvements may be deferred or removed from the Transportation Element. The county will use the annual update of the Six-Year Transportation Improvement Program (TIP) to re-evaluate priorities and timing of projects and need for alternative funding programs. Throughout the planning period, projects will be completed, and priorities will be revised. This will be accomplished by annually reviewing traffic growth and the location and intensity of land use growth in the county and UGAs. The county will then be able to direct funding to areas that are most impacted by growth or to roadways that may be falling below the multimodal level of service standards. The development of the TIP will be an ongoing process over the life of the plan and will be reviewed and amended annually.

Introduction

County of Chelan has initiated the public participation process for the 2026 Comprehensive Plan Periodic Update. Under the Washington State Growth Management Act (GMA), citizen participation and coordination is a comprehensive planning goal that counties and cities must address under RCW 36.70A.020(11). Public engagement opportunities must occur early and continue throughout the update process.

Public participation opportunities to gather input and provide information to the public on the comprehensive planning process included open house events, community surveys, project flyers, emails, social media, and general information updates on the project webpage and StoryMap. Tribal engagement is a separate process that includes letters alerting Tribal leaders of the project and inviting them to participate.

This public engagement summary is intended to detail how the project's public participation goals are being met as the County works through the comprehensive planning process and highlight County efforts that, to date, have been the most effective. Ultimately, feedback from the community is allowing the project team to understand anticipated benefits and challenges of the Comprehensive Plan. Prior to final adoption of the updated Comprehensive Plan, this report will be updated to reflect public engagement activities following the date of this document.

Public Participation Goals

At the outset of this project, the following public participation goals were set:

- Provide interested parties with timely information, an understanding of the periodic review process, and multiple opportunities to review and comment on proposed amendments to the Comprehensive Plan.
- Build trust between community members and County staff.
- Strive for understanding and respect, not agreement.
- Ensure that historically underrepresented groups are encouraged to participate in the planning process.
- Implement a resident engagement strategy that supports environmental justice and the goals of the Growth Management Act.
- Actively solicit information from residents, tribes, property owners, business owners, and other interested parties about their concerns, questions, and priorities for the periodic review process.
- Ensure that all interested parties, community groups and others have an equitable opportunity to participate collaboratively in Chelan County's planning process' core steps and policy creation and implementation efforts.
- Encourage interested parties to informally review and comment on proposed changes to the Comprehensive Plan throughout the process and provide those comments to the Planning Commission and Board of County Commissioners.

DRAFT

- Provide forums for formal public input at project milestones prior to decision-making by local officials.
- Consult and consider recommendations from Tribal entities and public agencies.
- Partner with nonprofit organizations to reach underrepresented communities and marginalized people.

Pursuant to RCW 36.70A.040 and RCW 36.70A.140, staff prepared a Public Participation Plan for the City Council to review and approve, to provide effective, early, and continuous public participation throughout the Comprehensive Plan and development regulations update process from all geographic, ethnic, and economic areas. The procedures provided for:

a) The broad dissemination of proposals and alternatives;
b) The opportunity for written comments;
c) Public hearings after effective notice;
d) Open discussions, communications programs, and information services; and
e) Consideration of public comments.

Public Participation Opportunities

Interactive and Online Engagement

A Comprehensive Plan Update webpage on the County website was developed, including links to surveys, general planning information under the GMA, a project timeline, and links to the StoryMap and the County of Chelan social media sites. The project's StoryMap provided summaries of open house events, hosted survey links, and provided easy access to the County's interactive GIS web map.

Social Media and Project E-Newsletters

Posts were regularly made to County social media pages to announce surveys, open house events, and updates on the project progress.

Noticing

Official public notices were posted to the Wenatchee World newspaper, the County's website, social media, and the county e-newsletter. Email distribution lists were also used to share information on project updates.

The SEPA Threshold Determination and initial SEPA public notice is planned to occur in the fall of 2026, formally informing the public, agencies, and tribes that environmental review for the Comprehensive Plan update is underway. This early notice supports meaningful engagement by giving the public advance time to review materials, coordinate internal reviews (for agencies and organizations), and plan participation during the formal SEPA comment window.

DRAFT

Workshops / Open House Events

The County of Chelan kicked off the Comprehensive Plan Periodic Update with three open house events in May of 2025. These events gave community members an opportunity to share their vision for the future of the County – and to discuss their experiences and concerns around housing, land use, transportation, climate resilience, and other Comprehensive Plan Elements. Participants represented a wide range of interests and included members of the public, members of community organizations, elected officials, City and County staff, and consultants providing support for this effort. The events were advertised through a variety of means, including the County's website, press releases, flyer distribution, email notifications, social media, and with the help of Wenatchee Café. The open houses were held in the following locations:

- May 19, 2025: Chelan High School (Joint open house hosted by the City of Chelan)
- May 20, 2025: Leavenworth Fire Hall
- May 21, 2025: Wenatchee Mission View Elementary School

Staff from the Community Development Department led a presentation with project background information, including the basics of comprehensive planning in Washington state, project schedule and opportunities for providing feedback. After the presentation, about 15 minutes of questions-and-answers were held with the audience.

The meetings included a general open house format where attendees could review posters with information on the draft Plan and speak with County of Chelan staff and consultants. The latter two meetings in Leavenworth and Wenatchee allowed attendees to visit tables on Comprehensive Plan topics. Attendees were invited to provide sticky notes on their posters with comments and fill out comment forms. In all cases, participants had the opportunity to speak with elected officials and County staff on a one-on-one basis.

Open House Feedback

The public provided informative feedback on a variety of topics during the events. The feedback will be reviewed and incorporated into the draft of the County of Chelan Comprehensive Plan where practical, either through added or revised policies and updated maps, new graphics, or new side bars with

DRAFT

supplemental information. A summary of all comments received will be provided to the Planning Commission and Board of County Commissioners.

Note: This summary does not include feedback received on the Climate Element or the Transportation Element. This summary includes only limited feedback received on the Climate and Transportation Elements. A separate summary will be prepared by the County teams assigned to those topics.

Comment Forms

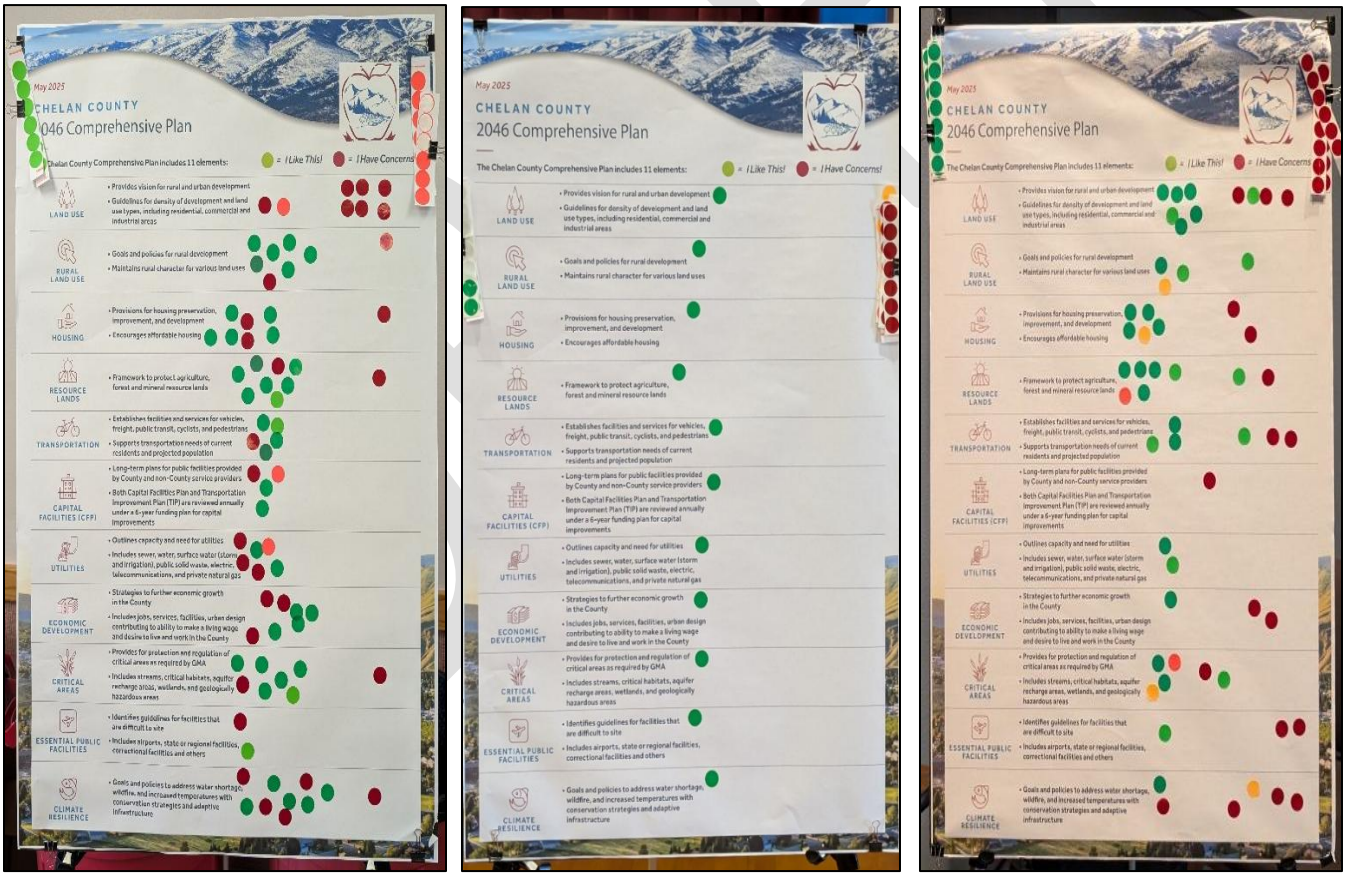
Forms were provided requesting feedback on priorities and concerns about housing, land use, and parks and open space. Responses from the comment forms include the following:

- Support for more community gardens and agricultural outreach and education.
- Support for purchasing ageing, old houses, converting them into duplexes, town homes and making them available for rent.
- Prohibit investment of hedge funds into purchasing housing stock.
- Protect existing low-income housing, such as mobile home parks.
- Most appropriate locations for housing:
    - In existing towns and cities and along the 2/97 corridor where transit and services exist.
    - In urban areas in proximity to the existing transit system to ensure access to basic services.
    - In appropriate zones.
    - Within already developed areas.
    - North Wenatchee alongside the river.
- Desirable housing types:
    - Mix of housing (e.g. duplexes, triplexes, accessory dwelling units [ADUs]) focused on energy efficient spaces.
    - Cottage development that offsets density with open space for natural or ag land.
    - Investigate inclusionary policies.
    - All kinds listed to the extent they provide more affordable housing.
    - Duplexes, triplexes, cottages.
- Support for a non-municipal Urban Growth Area (UGA) in Malaga: Yes (3) No (1)

Flip Chart

The joint City and County meeting at Chelan High School allowed attendees to enter specific comments and opportunities for discussion with City and County staff and their consultants. The flip chart produced one comment: "Can the Manson UGA be expanded eastward. Sewer, water and transportation are all available."

DRAFT



Dot Exercise

The meetings in Chelan, Leavenworth, and Wenatchee included a dot exercise board activity. Participants placed dots next to goals and policies pertaining to different elements of the Comprehensive Plan. Green dots signified: "I like this!" and red dots signified: "I have concerns".

As noted in the images below, the area of greatest concern were the land use sections described as follows:

- *Provides vision for rural and urban development*
- *Guidelines for density of development and land use types, including residential, commercial and industrial areas*
- *Climate resilience*

While concerns were raised about housing affordability, preservation of existing housing stock, development, capital facilities, utilities, and other elements, there was also optimism in these areas based on the number of green dots.

Open House Dot Charts.

City of Chelan and County of Chelan Joint Open House #1

Date: 5/19/2025
Location: Chelan High School
Time: 5:30 to 7:00pm

Open house: Chelan High School, Chelan

Meeting Notes:

- Approximately 30 residents were present along with public officials including Commissioner Brad Hawkins, City Council members, City and County staff, and their consultants.
- Commissioner Hawkins provided opening remarks inviting everyone to participate in the Comprehensive Plan update process.
- Chad Coltman and John Ajax from the City of Chelan gave an overview of the City's Comprehensive Plan update process, describing what the city can and cannot control as part of this update.
- Susan Dretke from County of Chelan gave an overview of the County's Comprehensive Plan update process and what portions of the County it covered relative to the City.
- John and Susan provided an overview of what the Comprehensive Plan update process will include, such as a new climate change and resiliency element and housing element updates (e.g., planning for housing on all income levels, emergency housing/shelter provisions, addressing racial disparities, and easing barriers to allow two ADUs on single-family residentially zoned lots).
- The City discussed ways to stay engaged, including participating in surveys and watching the website for updates and documentation.

- During the Q&A session, the group discussed the UGA and how the city can use that to manage growth.
- There was a written comment provided during the meeting requesting that the County consider expanding the UGA in Manson.
- City and County staff, and elected officials stayed after the meeting to discuss the update process and answer questions.

County of Chelan Open House #2

Date: 5/20/2025
Location: Leavenworth Fire District #3
Time: 5:30 to 7:00pm

Open House: Fire District #3, Leavenworth

Meeting Notes:

- Approximately 30 residents were present along with public officials including Commissioner Shon Smith, County staff, and their consultants.
- Commissioner Smith provided opening remarks inviting everyone to participate in the Comprehensive Plan update process.
- Susan Dretke from County of Chelan gave an overview of the County's Comprehensive Plan update process and timeline.
- Susan provided an overview of what the Comprehensive Plan update process will include, such as a new climate change and resiliency element and housing element updates (e.g., planning for

housing on all income levels, emergency housing/shelter provisions, addressing racial disparities, and easing barriers to allow two ADUs on single-family residential zoned lots).

- The County discussed ways to stay engaged, including participating in surveys and watching the website for updates and documentation.
- During the Q&A session, the group discussed the how to accommodate and preserve agricultural uses in the County through zoning or other measures.
- There were several written comments provided at the meeting:
    - One commenter voiced concern about housing or land use policies that promote gentrification and needed green space pushing out local and historical communities.
    - Another written comment stated that the County needs to consider pesticide use that affects laborers and the environment. Protections should be provided to small farmers, including incentivizing sustainable growing practices.
    - Another comment was to consider agriculture preservation in the County.
    - A final comment was provided about incentivizing the replacement of big open yards for pollinator/wildlife habitats.
- County staff provided an open house format after the presentation for people to learn more and ask questions about updates to various elements including transportation, recreation, climate change, and land use.

DRAFT

County of Chelan Open House #3

Date: 5/21/2025
Location: Mission View Elementary School
Time: 5:30 – 7:00 PM

Open House: Mission View Elementary School

Meeting Notes:

- Approximately 10 residents were present along with public officials including Commissioner Brad Hawkins, County staff, and their consultants.
- Commissioner Hawkins provided opening remarks inviting everyone to participate in the Comprehensive Plan update process.
- Susan Dretke from County of Chelan gave an overview of the County's Comprehensive Plan update process and timeline.
- Susan provided an overview of what the Comprehensive Plan update process will include, such as a new climate change and resiliency element and housing element updates (e.g., planning for housing on all income levels, emergency housing/shelter provisions, addressing racial disparities, and easing barriers to allow two ADUs on single-family residential zoned lots).
- The County discussed ways to stay engaged, including participating in surveys and watching the website for updates and documentation.
- During the Q&A session, the group discussed how to prevent further expansion of development to the west into the "foothills" of the City towards Saddle Rock to maintain the natural character

of that area. The County discussed that the city is responsible for zoning and development within the city limits. The County and the City would work together on the UGA and any expansion if it was desired.

- During the Q&A session, the group also discussed affordable housing and how to incentivize providing affordable housing options in the city and the County.
- County staff provided an open house format after the presentation for people to learn more and ask questions about updates to various elements including transportation, recreation, climate change, and land use.

Community Meetings on Draft Elements

A series of three public meetings were held in the spring of 2026 to share updates on the Comprehensive Plan, including draft goals and policies. The meetings were comprised of presentations from elected officials and staff, a Q&A session, and discussion. Many participants remained after the presentation for informal conversations with elected officials, county and city staff, and consultants.

Community Meeting No. 1 (Leavenworth)

Date: April 20, 2026
Location: Leavenworth Fire Hall, 228 Chumstick Highway, Leavenworth
Time: 6:00 PM

Meeting Notes:

- In attendance were five members of the public, a representative from Wenatchee Cafe, County Commissioner Smith, Community Development Director Deanna Walter, Susan Dretke (Senior Planner), and members and the consultant team.
- Susan Dretke gave the opening statement and introductory remarks, followed by a warm welcome from Commissioner Josh Smith.
- Staff presented a status report of the periodic update, an overview of notable proposed changes for the Comprehensive Plan elements and details on the project schedule through the end of the year.
- Consultants from Anchor QEA, Transpo, Firm Foundations, EK Consulting, and Facet were in attendance to address questions on the draft Comprehensive Plan.
- Questions were asked and answered on the following topics:
    - Plan implementation
    - Housing allocations and requirements
    - Peshastin UGA
    - Population estimates
    - Climate resiliency
    - Outreach

DRAFT

Community Meeting No. 2 (Joint Meeting with the City of Chelan)

Date: 04/21/2026
Location: Lake Chelan Community Center, 103 Bighorn Way, City of Chelan
Time: 6:30 PM

Public meeting: Chelan Community Center, Chelan

Meeting Notes:

- Approximately 40 members of the public were present in addition to representatives from the City of Chelan, County of Chelan, Wenatchee Café, and consulting firms.
- Opening statements were provided by County Commissioner Brad Hawkins and Chad Coltman, HR and Communications Director for the City of Chelan.
- John Ajax, City of Chelan Planning Director gave the first presentation with an overview of the Comprehensive Plan update process to date, including key changes, including proposed sub-area plans, housing allocations (pressures), results of the land capacity analysis, outreach and visioning efforts, transportation needs, infrastructure planning, and budgeting.
- The city confirmed it has sufficient land capacity to accommodate projected permanent population growth but must plan for significant seasonal increases from tourism and part-time residents.
- Primary concerns center on street network capacity and traffic management, which are being addressed through the transportation element.
- Questions were discussed regarding future planning for the Butte area, affordable housing, commercial and tourism development, and trail planning.

- Transportation consultants Daniel Hendricks (Transpo Group) and Brooklyn Holton (Firm Foundations) presented ongoing city and county transportation initiatives, including updates to transportation elements, integration of multimodal Level of Service (LOS) standards, ADA transition plan updates, and development of a Safety Action Plan through the federal Safe Streets for All Program.
- County staff Susan Dretke and Josh Jensen provided a status update on the County's periodic update, covering county-specific planning requirements, housing policies and needs, a proposal to convert the Malaga LAMIRD to an Urban Growth Area (UGA), development of a new Parks and Recreation Element, and outreach efforts and key findings.
- A question was raised regarding housing expansion plans within the Manson UGA.
- The meeting concluded with informal discussion among attendees, staff, and consultants.

Community Meeting No. 3

Date: April 23, 2026
Location: Mission View Elementary School, 60 Terminal Avenue, City of Wenatchee.
Time: 6:00 PM

Public Meeting: Mission View Elementary School, Wenatchee

Meeting Notes:

The meeting started at 6:00 and was attended by roughly 10 members of the public, in addition to representatives from the County of Chelan and consulting firms. Opening statements were provided by County Commissioner Kevin Overbay and Susan Dretke, Senior Planner with County of Chelan.

Josh Jensen of Anchor QEA provided an overview of the Comprehensive Plan Elements, schedule, and a summary of the Malaga UGA proposal. In particular, the Housing Element and housing discussions were had with the community, including questions by the public regarding expected housing increases in the Malaga area. Alex Capron of Facet spoke to efforts by the county to create housing meeting different scales, as reflective in two separate survey results of both Spanish speaking and general

community. Alex recognized efforts by Wenatchee Café to gain over 100 respondents in a December survey, specific to housing – acknowledging that while single-family housing is the predominant housing type desired by the community, a close second includes middle housing (ADU's, duplexes, townhomes, up to four-plex) housing.

Daniel Hendricks of Transpo Group and Brooklyn Holton of Firm Foundations followed with an overview of transportation efforts in the city and the county, including the following:

- Updating Transportation elements
- Incorporating new multimodal Level of Service (LOS) standards

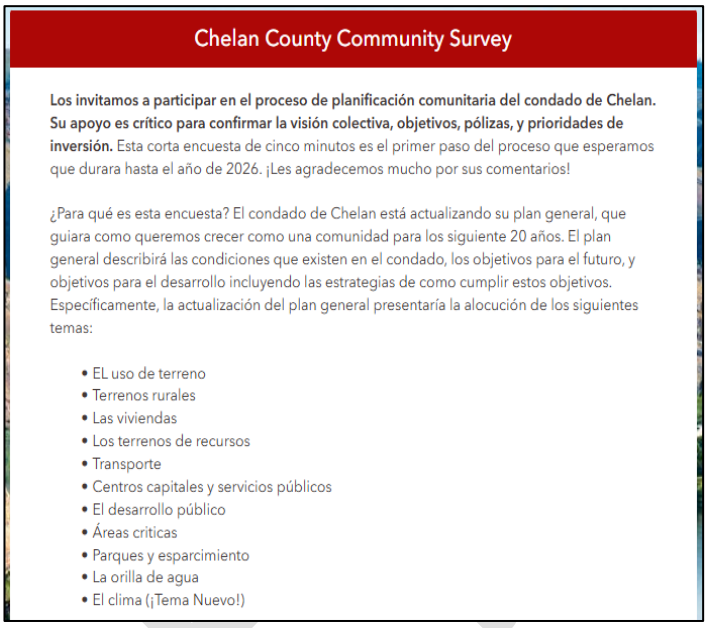
Susan closed the meeting through encouraging that people include their e-mail for project updates (nearly all had, per sign-in sheet). Susan also mentioned there will be a Malaga UGA specific meeting held May 21st at Mission View Elementary (same location as tonight's meeting), aimed at diving into the specifics regarding the UGA.

Community Surveys

To gather community feedback on community vision, concerns, and priorities for goals and policies, two surveys were distributed to the public in April 2025 and December 2025. An additional survey was available from November 2024 through December 2025 as part of the Tourism Impact Assessment.

English Surveys

The first survey was distributed in English using multiple outreach methods to maximize accessibility. The survey link was posted on the County's website and shared broadly via email and social media. Postcards with the survey link were also made available at local libraries, the Community Development Department, and upon request. This outreach effort helped gather broad community input on existing conditions and future priorities.



DRAFT

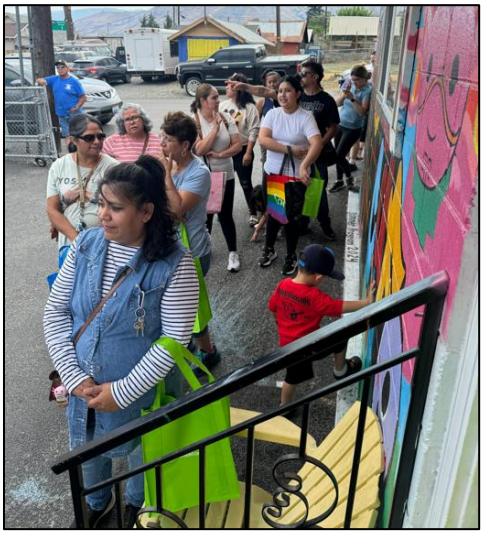
Survey feedback identified quality of life, natural amenities, parks, and outdoor access as Chelan County's greatest strengths, reflecting strong appreciation for recreation opportunities and the region's natural environment. In contrast, housing and economic development were consistently identified as the County's most significant challenges, particularly the lack of affordable and diverse housing options, limited housing for lower-income households and retirees, and insufficient job opportunities across skill levels. Respondents expressed strong demand for additional single-family homes as well as duplexes and triplexes, and raised concerns about rising housing costs, population growth outpacing housing supply, and the impacts of short-term rentals on housing availability. Transportation and mobility were also highlighted as areas needing improvement, with emphasis on roadway capacity, pedestrian and bicycle safety, and transit infrastructure. Overall, the feedback reflects a desire to preserve Chelan County's natural character and high quality of life while addressing housing affordability, infrastructure needs, and long-term community planning. Further details can be found in the English Community Survey Report prepared by Facet.

DRAFT

Spanish Surveys

Chelan County Community Survey

Los invitamos a participar en el proceso de planificación comunitaria del condado de Chelan. Su apoyo es crítico para confirmar la visión colectiva, objetivos, pólizas, y prioridades de inversión. Esta corta encuesta de cinco minutos es el primer paso del proceso que esperamos que durara hasta el año de 2026. ¡Les agradecemos mucho por sus comentarios!



¿Para qué es esta encuesta? El condado de Chelan está actualizando su plan general, que guiara como queremos crecer como una comunidad para los siguiente 20 años. El plan general describirá las condiciones que existen en el condado, los objetivos para el futuro, y objetivos para el desarrollo incluyendo las estrategias de como cumplir estos objetivos. Específicamente, la actualización del plan general presentaría la alocución de los siguientes temas:

- EL uso de terreno
- Terrenos rurales
- Las viviendas
- Los terrenos de recursos
- Transporte
- Centros capitales y servicios públicos
- El desarrollo público
- Áreas criticas
- Parques y esparcimiento
- La orilla de agua
- El clima (¡Tema Nuevo!)

The second survey was distributed in Spanish in December 2025, recognizing that approximately 30 percent of the County's population identified as Hispanic in 2024. This survey received 84 responses. The (write-in) paper surveys were distributed with the assistance of the Community for the Advancement of Family Education, also known as Wenatchee Café (CAFÉ). CAFÉ is a non-profit organization dedicated to advancing family and community growth through education and has played a pivotal role in facilitating community outreach on the Comprehensive Plan update, particularly within Chelan County's Hispanic community. The surveys were distributed at their Pachanga and Mercadito resource fairs. These are monthly events featuring a small produce market, activities, vendors, and community resources. CAFÉ also handed out surveys at food bank days while people waited in line.

Public engagement feedback highlighted housing affordability as the community's most significant concern, particularly for lower-income households and retirees. Respondents identified strong demand for a range of new housing types, including single-family homes, small and large apartment buildings, and emphasized the need for more rental and affordable options. Economic development feedback indicated the need for a more diverse employment base. Parks, recreation, open space, and natural amenities were consistently viewed as major strengths of the Chelan County region, especially environmental features such as Lake Chelan, forests, mountains, and open spaces. Further details can be found in the Spanish Community Survey Report prepared by Facet.

Tourism Impact Assessment Survey

With assistance from BERK, Chelan County conducted a study to provide a comprehensive and objective review of both the positive and negative impacts of tourism in Chelan County, including consideration of economic, fiscal, sociocultural, environmental, and community impacts.

The study included an online survey that gathered 760 responses from local residents and businesses. Survey respondents prioritized infrastructure investments in habitat restoration and protection of the natural environment (55 percent), workforce housing (52 percent), and roads and parking in high traffic areas (50 percent), over additional infrastructure, public transit, or wayfinding.

The survey highlighted that tourism is deeply woven into Chelan County's economy, environment, and community life, bringing both benefits and challenges. Residents consistently recognized tourism's role in supporting local businesses, jobs, amenities, and tax revenues that help fund services and infrastructure used by both visitors and locals. At the same time, engagement revealed widespread concern about traffic, overcrowding, infrastructure strain, environmental degradation at high-use natural areas, and rising costs that many associate with visitor activity. While housing affordability was identified as a significant issue, participants acknowledged it is a statewide challenge and not solely attributable to tourism.

Overall, the public emphasized the need for a balanced approach that preserves the economic strengths of tourism while better managing its impacts. Key themes included diversifying the economy, improving transparency around tourism tax investments, supporting housing for long-term residents, protecting natural resources through sustainable use and education, and smoothing visitation patterns over time and place. These insights informed a set of coordinated recommendations aimed at maximizing community benefits, minimizing negative impacts, and aligning county, city, and regional efforts as Chelan County plans for future growth.

Joint Board of County Commissioners (BOCC) and Planning Commission (PC) Workshops

Joint workshops were held with the Board of County Commissioners and the Planning Commission in two rounds. The first round provided an overview of the project and state requirements, covered recommended changes for each element, and addressed public questions and concerns. The second round occurred following the release of the draft Plan amendments and allowed the public to voice concerns and questions before adoption of the final Plan.

Tribal Engagement

Letters were sent to the following Native American Tribal entities, inviting them to participate in and inform the Comprehensive Plan Periodic Update process:

- Confederated Tribes of the Colville Reservation
- Confederated Tribes and Bands of the Yakama Nation

DRAFT

Although these Tribes did not respond to the County's invitation, this did not preclude them from participating and engaging in the process at any time prior to the adoption date.

Community Events

In addition to hosting public open house events and meetings, County staff attended numerous community events to share information on the Comprehensive Plan. This included attendance at Malaga Community Council meetings on January 8, March 5, April 2, and April 15 in 2026 and Chelan's Earth Day celebration on April 18, 2026.

Public Hearing and Adoption Meeting

On (DATE) the complete draft Comprehensive Plan was released for public review on _____ ,2026 and forwarded to the Washington State Department of Commerce for a mandatory 60-day review. During that timeframe, approximately XX written comments were received. A public hearing was then held before the Planning Commission on _____, 2026. Following the public hearing the Planning Commission forwarded their findings to the Board of County Commissioners recommending…

DRAFT

1 Introduction and Summary

This comprehensive plan is written in accordance with the goals of the Washington State Growth Management Act (GMA, Revised Code of Washington 36.70A) for the Manson Community. It is a guide for current and future growth to preserve surrounding agriculture and open space while focusing a variety of commercial, industrial and residential development within the urban growth area. The Manson Community is defined by an existing Urban Growth Area surrounded by agricultural lands. Agricultural activities have been the primary activity defining the character of the community. The preservation of the surrounding agricultural activities is important to the community; therefore, this plan incorporates a regional perspective with a focus on the Manson community goals and policies. Recent population growth and newer tourist recreation uses have applied pressure on agricultural lands. The goal of this plan is to provide for growth in a manner that supports the surrounding agriculture. Furthermore, the community hopes to encourage policies that provide for continued use of agricultural land, outside the Urban Growth Area.

Community Background

The study area for this plan comprises the Chelan County Fire District #5 service area, extending eastward and northward from the shores of Lake Chelan, and including an area of about 18.5 square miles, approximately 11,882 acres. Within the study area, the primary focus of this plan is the Manson Urban Growth Area (UGA) and its surrounding lands. Though Lake Chelan is a primary water feature, the study area has three smaller lakes: Dry Lake, Wapato Lake, and Roses Lake.

The Manson UGA is truly a small community. It supports urban residential and commercial land uses as a small town, even though it remains unincorporated. It is home to the Manson School District and is serviced by public water and sewer. It is the primary location for the Chelan County Fire District #5.

The remainder of the planning area is mostly large tract, rural land uses or natural open space with minimum parcel sizes of 10 or 20 acres. The landscape is a patchwork quilt of orchards producing apples, cherries, pears, grapes, and a mix of other agricultural product among natural open space. In fact, agriculture is one of the top three industries in the study area, according to the 2000 Census.

Plan Objectives

This plan is designed to guide land use decisions in the study area over the next 20 years. The goals and policies presented are intended to ensure that Manson and its surroundings grow as the community hopes and envisions.

The Plan is also intended to help maintain reasonable continuity in future decision-making as changes occur within the community's leadership and the County's legislative body. It furnishes direction for the development of the community which will make it a more convenient, attractive and orderly place in which to live, shop, work and play. However, the Plan must be periodically reviewed and updated to reflect technological, social, economic and political changes that may invalidate certain plans and policies.

The primary emphasis of the Growth Management Act (RCW 36.70A) is coordinated, cooperative planning efforts, with substantial, continuous input from all sectors of the population that will help balance the scales between economic development and environmental preservation. It also became a responsibility of local governments to follow through with the citizens' vision for their community by implementing the direction laid out in the comprehensive plan with compatible development regulations such as zoning and subdivision codes. This Plan is intended to advance the fourteen goals outlined in the

Growth Management Act (RCW 36.70A) and the Chelan County Shoreline Master Program as they pertain to the Manson community.

Authority

The Growth Management Act (GMA) is the enabling legislation that renders this Manson Comprehensive Plan a legally recognized document by the State of Washington; however, it is a policy document only. The policies are required by GMA to be implemented through the use of such regulatory tools as zoning and subdivision ordinances, as well as other innovative techniques. These regulations must be developed and maintained in accordance with the goals and policies of Chelan County's Comprehensive Plan and this Manson Comprehensive Plan, as set forth in the Growth Management Act, as amended.

Scope and Organization

This Comprehensive Plan is composed of the five required elements, as provided for in RCW 36.70A.070 and 36.70A.080, and two optional elements that must be closely interrelated to serve as a satisfactory guide for future development:
The Land Use Element
The Housing Element
The Capital Facilities and Utilities Element (combined)
The Transportation Element
The Optional Elements: Recreation and Economic Development

Public Process

The public actively participated in producing this comprehensive plan through regular meetings of the Manson Community Council, public meetings, and early and continuous public comment. In March of 2006, the Council formed a planning committee to concentrate on this comprehensive plan's creation, sponsored a community questionnaire, and conducted regular meetings to write and adopt the plan's vision statement. In July of 2007, Chelan County contracted with a planning consultant, Studio Cascade, Inc., to facilitate completion of the plan using the Council's adopted vision statement. Between April and September of 2008, the committee, council and numerous residents reviewed a draft version of this plan and provided substantial input and directed revisions. From April 2008, Chelan County planning staff worked with the community to complete and adopt the plan. Several discussions relating to population projections and possible urban growth area boundary changes kept the draft plan with the committee until December 2008. In January 2009, the Manson Community Council took the draft plan back and worked with or revised the recommendations to present a final draft to the whole community at a August 2009 Workshop and Hearing.

Workshops

Vision Workshop

The first comprehensive plan workshop was held August 28, 2007, and was designed to provoke thought and more specific direction based on the Community Council's adopted vision work. Participants were asked to "weight" various broad-brush descriptions related to future plan elements, in order to determine priority and which descriptions best reflected the area they wanted to see in 2028. The adopted and more articulated version of the vision developed in this workshop is presented in Chapter Two.

Alternatives Workshop

The second comprehensive plan workshop focused on applying the draft vision to the spatial distribution of development in Manson. Participants placed dots on maps to represent where they

foresaw population locating and, by extension, how large the UGA would need to be to accommodate forecast growth. Each dot was scaled to represent the area necessary to accommodate 200 residents at a density of four dwellings per acre. Since forecast population growth was assumed to be an additional 1,500 to 2,000 more residents by the year 2028, participants were given ten dots to place on their individual maps. The resulting dot arrays tended to fall into three distinct types, as follows:

- **Concentrated –** Some favored a UGA alternative that remained generally contiguous with the existing UGA. These participants believed that adequate land already exists to accommodate forecast population growth, and that increased residential density near the established downtown would help limit sprawl.
- **Clustered –** Some favored limited expansion into lands beyond the current UGA, with growth concentrated in "hamlets" or clusters surrounded by open spaces and working orchards.
- **Dispersed –** Some favored a more dispersed growth pattern and envisioned larger-scale conversion of agricultural land, locating new residential areas to take advantage of lake views and the area's existing utility infrastructure. Proponents of this pattern also incorporated additional land for future industrial development.

Following the initial, individual phase of the evening's work, participants were grouped according to preferred land use pattern as described above, and were asked to discuss and re-work their strategy as a team. Presentations in defense of their strategies were made at the conclusion of the process.

Policy Workshop

Participants reviewed several policy options based on the results of the previous two workshops. Policy alternatives explored land use, environmental, economic and transportation-oriented choices, helping identify the community's overall priorities and providing direction on how to manage Manson's development. Some of the more in-depth discussions involved:

- **Transfer of Development Rights (TDR) –** While there was a general desire to allow for retention of open spaces and to ensure that active agriculture remained part of Manson's context, there was no agreement that a transfer of development rights program was the best way to achieve those objectives. The complications of the program, difficulty in designating sending and receiving areas, reliance on the County as a TDR administrator, and the permanence of selling development rights made participants reluctant to endorse the concept. The general consensus was that TDR might work in some instances, but it should not become a primary implementation tool. [During the March 20, 2012 Manson Community Council meeting, it was determined that a TDR program is not appropriate for the Manson Urban Growth Area.]
- **Manson's center –** Participants underscored their desire to keep central (downtown) Manson active and robust. Even though UGA expansion may be deemed necessary to accommodate future population growth, participants expressed an interest in incorporating higher-density housing near Manson's core. Such development was also deemed valuable in helping central Manson function as a viable, year-round commercial center.
- **Affordable housing –** Participants noted that families working in Manson have difficulty affording housing in Manson. The area's summer-season resort attractiveness has driven land prices upward. Some workshop participants desired the UGA to provide greater supplies of land to help drive land costs downward, helping to reduce base housing prices.

- **Water and wastewater capacity –** Manson's sewer services rely on the City of Chelan. While the Lake Chelan Reclamation District is Manson's water and sewer services provider, the District is interconnected with Chelan's water system and sends untreated effluent to the City of Chelan's wastewater plant for treatment and disposal.
- **Agricultural land conversion –** Economic shifts will continue to influence how farmers and orchardists manage their land. Participants agreed on the importance of maintaining a traditional agricultural base in Manson, but they also wanted local agricultural practices to be able to adapt to changes the future will bring. In some cases, participants felt, that may require conversion from orchard to other agricultural – or even or non-agricultural use.

UGA Workshops

Two UGA workshops held with the plan committee in December 2007 and January 2008 concentrated on establishing the extent of urbanized land. Discussions concentrated on the amount of land needed to accommodate forecast growth; the extent to which services can be provided to UGA lands, the desired type and form of future development, and Manson's capability to support increased economic activity. Groups considered four UGA alternatives, while acknowledging the community's desire to remain largely rural in character. These were:

- **"No Change" -** This alternative showed no change in the existing 1.08 square-mile UGA. Concerns expressed included the fact that most land within the current UGA is already developed, and that infill development or intensification sufficient to accommodate forecast growth could be out of step with the character of existing neighborhoods. To accommodate future population growth, this group felt, Manson's UGA would need to grow slightly to avoid excessive and incompatible infill within existing residential areas.
- **"Alternative 1" -** The first alternative altering the size of the UGA increased the total area by 0.77 square miles to 1.85 square miles. This alternative extended the UGA as far eastward as Klate Road and north above the western most arm of the UGA to include some of Manson Boulevard. A UGA of this size would require some increased density in the UGA beyond current patterns to accommodate projected growth.
- **"Alternative 2" -** This alternative proposed doubling the existing UGA area to 2.16 square miles. It included all the area in Alternative 1, but extended the eastern boundary of the UGA beyond Swartout Road. This alternative included sufficient land area to accommodate projected growth at current densities.
- **"Alternative 3" -** This alternative was the largest of those considered, nearly tripling Manson's UGA area to 3.09 square miles. This alternative extended as far north as Wapato Lake Road and as far south as Swartout Road. This alternative provided more land than necessary to meet forecast growth at existing densities.

During this early meeting process, the participants preferred Alternative 3 - increasing the total land area of the UGA by 2.01 square miles. The committee's hope was that a UGA of this size would help provide enough land for future industrial development while easing market pressures that drive land costs for housing upward. While this appeared to capture the community's general preference, discussions following the preparation and presentation of an initial draft plan revealed that additional policies, land-use designations and UGA boundaries deserved a closer look.

Additional Deliberation

Following the delivery of the first draft plan and subsequent input from the community, the comprehensive plan committee held meetings during the months of August and December of 2008 for the purpose of evaluating and refining the plan's UGA and policy framework. Much of this input, and impetus for further evaluation, came from a newly formed set of participants known as The Resident Group (TRG) and a County re-analysis of population projections based on the adopted County Comprehensive Plan.

During the Committee's August meeting, the majority of the discussion focused on issues regarding the Manson UGA boundary. After receiving and considering public comments on this topic, a motion was made and passed to revise the draft plan UGA boundary to conform with the sewer service boundary.

Per the August motion, the Chelan County Department of Community Development staff prepared new draft comprehensive plan maps, showing a UGA boundary line presented in this plan and providing an expansion of approximately 1.42 square miles, somewhat smaller than Alternative 1. Further, the Committee instructed staff to insert proposed UGA designations into the newly created expanded UGA and present it at the September meeting.

Community Development planning staff presented two draft maps along with other supplemental maps at the committee's September meeting. The first map shown was the proposed expanded UGA boundary line map based on the committee's August directive. The second map included the proposed UGA, with County staff recommended designations inserted into the expansion areas.

After receiving and considering public comments, the committee passed a motion recommending adoption of the map with changes to include the new recommended designations of Manson Commercial (MC), Manson Light Industrial (MLI), and Urban Residential 1 (UR1). In addition, the committee approved additional goal and policy language related to land-use, parks and economic development issues, and asked that it be added to the draft Manson plan. The committee recommendations were then given to the Manson Community Council. The following list details the Manson Community Council meetings:

- Feb 24. 2009 transition in County Staff & review of population projection numbers;
- March 10, 2009 Land Use Designations verses Zoning; Zoning 101
- April 16, 2009 history of Committee UGA proposals and zoning proposals
- May 21, 2009 review of proposed zoning boundaries
- June 16, 2009 and June 25, 2009 reviewed the zoning use chart
- July 9, 2009 reviewed zoning regulations
- July 23, 2009 reviewed Comprehensive Plan
- August 25, 2009 Public Open House and Hearing

2 Vision

After many months of County-facilitated work with the Manson "vision plan" committee, the Manson community produced the following language as a basis for this plan:

"The Vision of the Manson Comprehensive Plan is to protect and enhance the quality of life within the Manson community through protection of its resources, its lakes, and its environment for current and future generations, and the provision for sustainable economic growth."

Planning Directives

Recognizing the very "broad brush" nature of this vision statement, the consultant-led public workshops generated numerous directives adding dimension to the base vision, outlining community priorities and hopes for its future. These directives are grouped below by plan topic:

Land Use

- Focus growth in the UGA
- Promote mixed uses in the commercial designations
- Preserve Manson's rural, "small-town" and "neighborhood feel"
- Focus on the lake's edge for recreational and residential development
- Adopt design guidelines
- Alternative parking options (March 20, 2012)
- Provide for flexible lot sizes
- Screen commercial and industrial sites
- Promote higher density in and around the commercial designations
- Work with land trusts and similar organizations to preserve open space areas
- Respect constraints from topographic and environmental conditions
- Connect developments to each other
- Preserve scenic vistas and view corridors
- Respect property rights
- Retain farming
- Permit flexibility to keep or convert orchards
- Minimize conflict between agricultural operations and adjoining uses
- Permit small hobby farms
- Allow smaller acreage agricultural uses
- Ease rules and barriers that make farming more difficult

Environment

- Preserve open space
- Protect lake water quality

Housing

- Manage population growth
- Do not allow gated communities
- Provide affordable housing
- Provide a variety of housing types

Transportation

- Make Manson more pedestrian friendly
- Connect walking routes to schools
- Reduce traffic hazards
- Promote alternative parking options (March 20, 2012)
- Promote pedestrian circulation
- Enhance the SR 150 corridor
- Enhance community entries
- Provide alternative truck routes

Capital Facilities and Utilities

- Link taxes to local needs
- Consider mitigation and impact fees
- Maintain or enhance levels of service
- Consider alternative parking options (March 20, 2012)
- Coordinate with the City of Chelan on utility provision and transportation

Parks and Recreation

- Provide an integrated trail system linking parks and the lakes, as well as other loop and linear trails where appropriate
- Enhance lakes access through existing rights-of-way and new access points
- Develop pocket parks, beginning in the commercial designations. Work with the community, County and other partners to promote development of community and neighborhood parks and recreation facilities

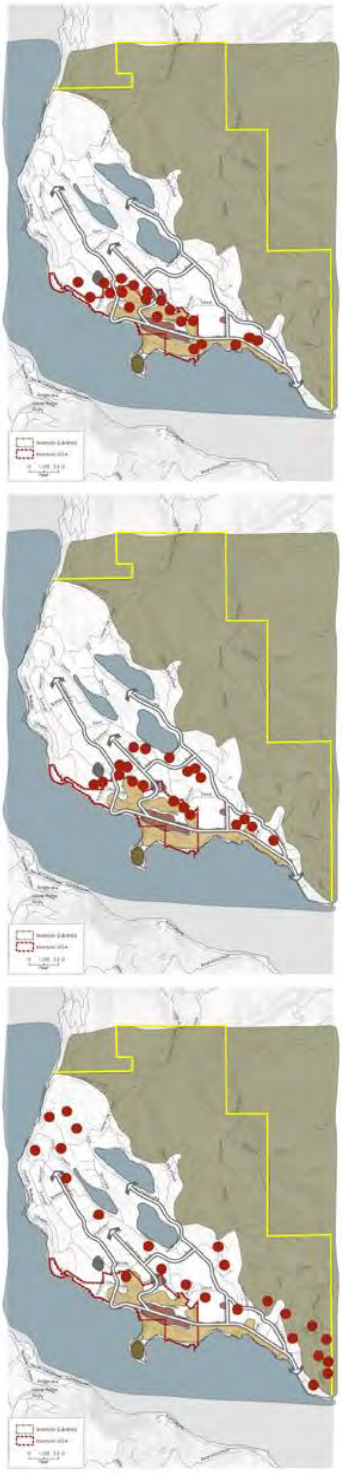


Figure 2.1 *– The three community form alternatives, with dots representing population groupings of 100 new residents.*

Economic Development and Tourism

- Retain families
- Promote small business
- Retain farming
- Provide livable wages
- Support the arts
- Enhance image of "village on the bay" (including all four lakes)
- Collaborate with the Port of Chelan County
- Facilitate year-round activity

***Figure* 2.2** – *A conceptual vision of Manson as developed as a village surrounded by agricultural land and open spaces.*

Alternatives Considered

In the August 2007 workshop, the Community Council and the planning committee were given an exercise designed to define the overall form Manson should take as it grows to accommodate up to 2,000 more residents. Participants were each given 20 dots representing – at four units per acre – groupings of 100 new residents with maps of the study area scaled to the dot size. Each was asked to place dots on the map in areas deemed logical and consistent with the community vision for residential development. From all participants, three general alternatives emerged. Participants with similar results were asked to form groups, refine their results in the form of a new group map, and describe and defend their strategy to the larger assembly. A summary of the three general alternatives follows:

"It's already here" – This group sought not to expand the urban growth area, instead locating most of the forecast population within or in close proximity to the existing community core. The intent was to develop existing vacant land within town first, prevent the conversion of agricultural land, and establish a more dense urban development pattern that could be served in a cost-effective and efficient manner.

"Clustered Growth" – This group sought to develop available land in the UGA but also allow some growth to expand beyond current boundaries in the form of "village" style clustered development. The intent was to retain some land near town in agricultural or open space use while still allowing some of it to convert out of farming. The clustered form for the new villages, it was felt, would make serving the new development easier and help preserve the open space character of the community.

"Outside the Lines" – The third group located development across a much larger area, taking advantage of lake views and existing transportation and water/wastewater services. The intent behind this alternative was to increase the supply of land available for development to reduce per-acre costs; support additional employment opportunities through industrial development; provide for a large range housing development options; and to help draw what would otherwise be large-lot residential development in the distant agricultural fringe into areas more easily served by Manson's infrastructure.

While each alternative represented a distinctly different image for Manson's future, they all shared common elements that, in conjunction with the vision's directives, underpinned the plan's development:

- A desire for preservation of Manson's agricultural economy
- Accommodation for new residents in and around Manson

- Efficiency of infrastructure, particularly water and wastewater
- Priority to redevelop and enhance Manson's downtown through the creation of development standards which may include roof modulation and parking alternatives (Manson Community Council meeting March 20, 2012).
- Orientation of development to take advantage of physical and visual lake access
- Support for housing affordability
- Accommodation of diversity in culture, income level, age and employment

The community's adopted vision played a prominent role in all of these exercises. As the plan became more refined, these overriding vision concepts helped reconcile differences and facilitate compromise between participants. While the proposed land use plan may not make every participant completely happy, it is designed to achieve what all valued most.

3 Land Use

This land use chapter establishes goals and policies to guide Manson's physical development. It outlines the community's existing land use environment and, in concert with current Chelan County practice, proposes specific comprehensive plan to help direct Manson's look and function in the years to come. The Plan Concept section provides a summary chart (Table 3.5) that characterizes land use designations designed to implement the plans goals and policies and provides an image of the resulting development patterns likely to occur.

Existing Conditions

The Manson area's existing land use designations are diverse, but such diversity is typical of land use designations in and around small towns in Chelan County. For purposes of this plan, the entire 18-square-mile Manson study area is divided into two smaller areas: the Manson Urban Growth Area (UGA) and the Rural Study Area. Each of the two areas has distinguishing characteristics, described as follows:

Manson UGA

The UGA comprises the unincorporated community of Manson. Densities within the UGA are similar to other small towns and UGAs within Chelan County. Residential uses in the UGA are UR1, UR2, and UR3. Commercial designations in the UGA are intended to permit a range of retail, service and preferably above-ground-floor dwelling units, meaning the potential exists for mixed-use development in these commercial areas. For the Pedio Harris neighborhood, (a 5.5 acre triangle, from the Pedio and Harris intersection north to the alley south of Wapato Way), the historical residential uses may transition overtime to a mix of public space and residential and commercial uses.

Rural Study Area

The remainder of the study area is largely rural in nature. It contains large-lot housing, orchards and three small lakes. The densest rural residential designations are Rural Waterfront (RW) and Rural Village (RV), reflecting limited areas of more intensive development. For single-family dwellings, these direct a minimum lot size of 12,000 square feet or as necessary for rural wastewater treatment facilities; duplexes and multi-family dwellings are allowed in the RV zone, increasing the dwelling unit density. Rural designations include - Rural Residential 5 (RR-5), Rural Residential 2.5 (RR-2.5) and Commercial

Agricultural (AC) land. Rural designations generally permit residential density that ranges from one dwelling unit per 20 acres to one dwelling unit per 2.5 acres. There are also several planned developments in the rural areas, providing more densely clustered housing in exchange for open space area retention.

No Rural Commercial (RC) designation exists in the Rural study area, and only three acres of Rural Industrial (RI) designation exist there. The study area does, however, have an abundance of land in the Commercial Agriculture (AC) and a small area of Commercial Mineral (MC).

Existing Land Use Designations and Uses

The majority of land in the study area, about 5,900 acres, is designated Commercial Agriculture (AC). The next most prolific land use designation in the study area is Rural Residential 20 (RR20) occupying approximately 1,600 acres. Table 3.2 below lists the land use designations, and the amount of land they occupy in the study area.

Table 3.2 – Land within Existing Designations

Land Use Designation	Acres in Rural Study area	Acres in UGA
Commercial Agriculture (AC)	5,895.5	1.2
General Commercial (CG)	33.7	33.7
Pedestrian-Oriented Commercial (CP)	24.9	24.9
Tourist Commercial (CT)	32.5	32.5
Commercial Mineral Lands (MC)	8.3	0.0
Public Lands and Facilities (P)	60.5	44.0
Rural Industrial (RI)	3.0	0.0
Rural Residential 2.5 (RR2.5)	685.8	123.4
Rural Residential 5 (RR5)	1,046.6	302.8
Rural Residential/Resource 10 (RR10)	910.0	0.0
Rural Residential/Resource 20 (RR20)	1,546.9	0.0
Rural Village (RV)	128.1	127.1
Rural Waterfront (RW)	263.1	0.0
Urban Residential 1 (UR1)	98.1	98.1
Urban Residential 2 (UR2)	305.2	305.2
Urban Residential 3 (UR3)	101.7	101.7
Urban Waterfront Residential (UWR)	55.1	55.0
Wapato	256.4	256.2

- *The Wapato designation simply identifies land in Tribal trust. Chelan County does not exert land use jurisdiction on these areas; it is shown here due to its prominence in Manson, and to illustrate the extent of Tribal land ownership in the community.*

MANSON URBAN GROWTH AREA LAND USES

2008 Land Uses

While this plan provides for understanding the larger framework of the region one of the primary objectives is the plan for the Manson Urban Growth area. To accomplish this, the following chart, and above table, show existing land uses.

Land Use within the proposed UGA	Acres
Agriculture	225.15
Commercial	206.48
Industrial	2.19
Multi-Family	113.96
Public	53.56
Single Family	689.08
Vacant	34.11

Planning Concepts

Throughout the public process, the community voiced two very important and potentially conflicting desires:

- Development should be concentrated near Manson's center to reinforce the community's identity, encourage preservation of surrounding agricultural open spaces, and help Manson evolve in a manner that conserves resources.
- Land along the community's fringes should be allowed to develop in a manner appropriate to changing economic conditions, enabling farmers to respond to individual and market forces in the disposition of their land while still respecting the community's desire to honor its agricultural heritage and take advantage of lake views.

The planning concept embodied in this document responds to these desires in a manner consistent with the community's vision, seeking a compromise that satisfies those who wish to see Manson evolve in a more compact form and those who wish to permit continued conversion of agricultural land on the fringe.

This plan places a focus on the village, or town center, creating an environment where its land uses can become more diverse and its physical context more complex. The plan supports a mix of types, sizes and values of residential uses in close proximity to commercial development, and the enhancement of parks and public spaces. The plan strategies enhance the downtown experience for visitors and residents alike, and help the town center become a year-round activity center, serving important local needs and respecting its historic role as the community's gathering place. The highway corridor leading into Manson, however, will play an increasingly important role as Manson evolves. This plan establishes land use designations that will permit the corridor to gradually become a gateway to the town center (or commercial designations), but additional study will need to be done to ensure that development along the corridor complements the community's vision for its center.

But the plan also looks to the community's fringe, expanding the size of the urban growth area to accommodate population growth through subdivision of land not already developed. It also incorporates a "planned agricultural development" and "transferable development rights" as possible provisions to

preserve agricultural land. The expanded UGA area also provides for the development of light-impact industrial projects, facilitating diversification of the community's economy.

This plan proposes an innovative land use approach and an expanded UGA to achieve the desires expressed in the public process.

The land use concept introduces town center and light industrial areas: Downtown Commercial, Tourist Commercial and Mixed/Light Industrial. The commercial designations are situated in the heart of downtown Manson and will encourage future development to create a vital downtown core. The Light Industrial areas will allow light-impact industrial uses within urban areas, providing employment opportunities in Manson.

The comprehensive plan designations within the Urban Growth Area (Figure 3.6) are provide for commercial mixed use land activities. These designation do not require additional off-street parking.

The rural land outside of the UGA, but still within the study area, are encouraged to remain rural agricultural.

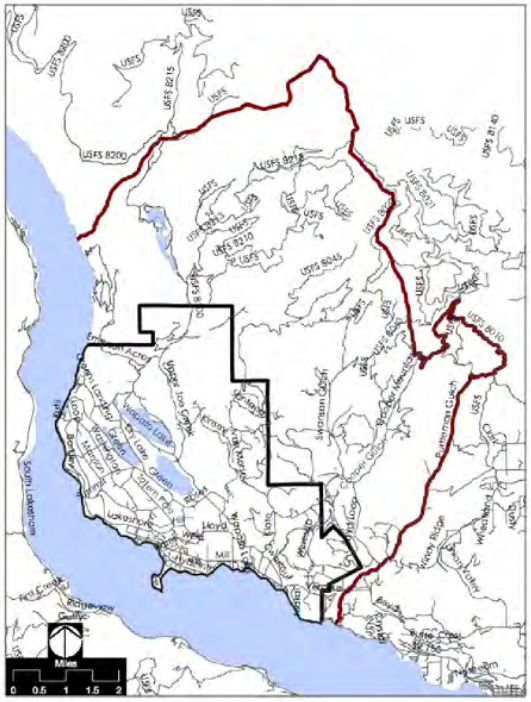

Figure 3.1 *- Manson's Census county division (CCD – shown in red) is larger than the Manson study area (shown in black), incorporating sparsely populated Forest Service land and the lower foothills.*

Sizing the UGA

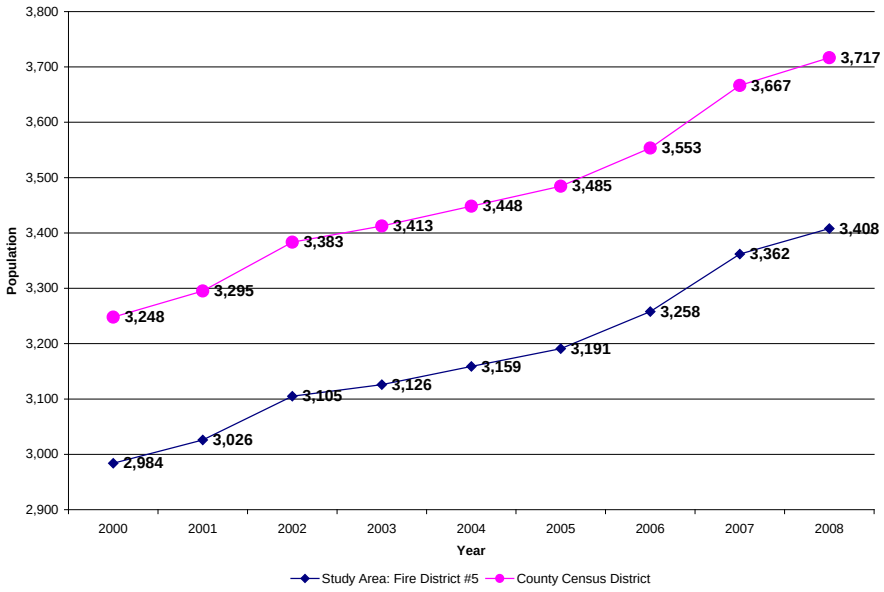
Washington State's Growth Management Act (GMA) requires that jurisdictions size urban growth areas (UGAs) to match forecast population growth, assigned to the County by the Washington State Office of Financial Management (OFM) and divided among the County's UGAs and rural lands based on known and assumed land development patterns. Such land consumption and land availability assumptions take into account the local jurisdiction's vision of planning for the development of a variety and intensity of land uses, depending on the community's desired character, unique environmental conditions, property ownership patterns, and availability of public services.

In its discussions to estimate the size of the UGA and the type and intensity of land uses within it, the Manson planning committee asked for information on three things:

- Manson's forecast population
- The amount of growth that may reasonably be accommodated within the existing UGA
- The amount of land that may be required to be added to the UGA to accommodate the remainder of the population increase

The following assumptions and calculations are based on available data, field research and typical land consumption rates for urban land uses. Specific conditions may vary from these assumptions, but this establishes a starting point for discussing the UGA's minimum size.

The final form the community wishes Manson to take, however, can have a profound impact on the UGA's size and shape, as well, possibly increasing it to accommodate reduced household sizes, an increased urban population allocation, or increasing numbers of seasonal housing units. Manson's household size (at 2.87 persons per household) is 25% greater than Chelan County's average. That may change in time.



Population

The Chelan County Comprehensive Plan provides population projections for the County Census District (CCD), see Figure 3.1. A more focused population project for just the study area, also known as Fire District #5, was pulled from the Washington State Office of Financial Management (OFM). Graph 1 demonstrates the correlation between the CCD and the study area projections provided by the OFM for 2000-2008. The 2008 estimated population states that the study area is home to about 3,408 people [1]. Its most dense population is in the unincorporated community of Manson (population 1,685) which is included in the County's Comprehensive Plan Urban Growth Area (UGA) as the Manson UGA. The OFM estimates that the study area had approximately 1,748 housing units in 2008, with about 1,163 of them (67 percent) occupied. Census figures show that in 2000, the average household size in the study area was 2.87 persons. According to the 2000 Census, about 37 percent of the study area's total population and 65 percent of the enrolled student population was Hispanic or Latino.

The Chelan County Comprehensive Plan projects that by 2025, the Manson CCD, will be home to about 4,578 persons - an increase of 1,330, or approximately 40 percent more residents– an annual increase of 1.4%. Based on the OFM projections for the most recent years, 2000 through 2008, the rate of annual increase is closer to 2%. This plan builds on the OFM's CCD population estimate, of 3,717 persons in 2008, with a conservative 1.5% annual population increase from 2008 through 2028. This equates to approximately 5,006 total persons in 2028 within the CCD. Correlating the current CCD population to the study area (Fire District Boundary), it was determined that about 91% of the CCD population resides in the study area. Forecasting those ratios for 2028, it can be reasonably estimated that, approximately 4,740 or 95% of the population will be within the study area.

[1] Population per the OFM Small Area Estimate Program, Fire District Boundaries (http://www.ofm.wa.gov/pop/smallarea/default.asp#estimates)

Graph 1: OFM Population Data

To determine what portion of the population will be in the urban or rural areas, the Chelan County Comprehensive Plan provides for a ratio split of the urban and rural population. For the Manson CCD the split is 60 urban/40 rural. This plan further divides the population allocation between the three areas identified in this plan: the CCD, study area, and the Manson UGA. Of the overall population projection, 5% is expected in the CCD region and the remaining 95% or 1,332[2] new residents would be split - 60 percent within the Manson UGA and 40 percent in the outlying rural study area.

Tribal development – The Colville Confederated Tribes own land within the Manson Urban Growth Area. That land lies immediately adjacent to the existing UGA, on Wapato Point and as a separate parcel on the north side of SR 150. Wapato Point is developed as a resort community, catering to seasonal residents. Currently, the land to the north of SR 150 is developed with a casino and golf course. This land is not considered a part of the population or land use designation plan; however, it does affect development patterns, transportation, environmental impacts and economics. The Manson community welcomes future joint planning efforts with the tribe to address impacts.

Dwelling units within the UGA – Available land and current designations within the UGA indicate that approximately 200 to 250 additional dwelling units can be accommodated within the current UGA boundaries. This number includes land already subdivided but not yet improved (finalized), as well as land currently vacant. It also takes into account lands within the UGA that are constrained.

[2] 2028 population of 4,740 minus 2008 population of 3,408

Residential density – The proposed comprehensive plan Manson UGA designations, identified in this plan (Figure 3.4) provide for the same lot sizes as the 2000 Comprehensive Plan but reduce the density allowances. This change may impact potential multifamily developments which could potentially obtain higher densities by building apartment complexes meeting the required lot sizes.

Land consumption –Public rights of way, parks, and institutional land uses are developed within the Manson UGA. New subdivisions will provide additional public rights of way and possibly parks. For purposes of sizing the UGA, the plan assumes that 15% of the necessary land will be devoted to public lands or utilities use.

Constrained land – Manson's natural terrain and environment impacts the suitability of the land for accommodating future development. Wetlands, lakes, creeks, steep slopes, and rocky soils limit available land. Based on field study and review of the County's GIS data layers, it appears that up to 10% of the land surrounding Manson's existing UGA may be constrained by one or more of these impacts, reducing its development potential.

Market Availability Allowance – Not every acre within the UGA or its proposed expansion will be available for development or redevelopment within the next 20 years. Much of the land is already either developed or subdivided in a fashion that makes its availability unlikely. In addition, there may be property owners who have no intention to further develop their land, choosing to retain their large parcels regardless of land use or economic change. This analysis assumes that up to 15% of the land within Manson's UGA and immediate surroundings is unavailable.

Build out – There are 640 acres in a square mile. Based on these assumptions, and as shown in Table 3.3, the minimum UGA expansion area is approximately 0.15 square miles.

Table 3.3 – Calculations for Housing

Item	Factors	Result
2028 population forecast for Manson study area	4,740 population total by 2028	1,186 study area population increase
New dwelling units needed	1,186 new population by 2028 / 2.87 persons per household = 414 units	414 new units needed
Dwelling units needed beyond UGA	414 units x 40% = 165 units outside UGA	166 units outside UGA
Dwelling units needed within UGA	414 units x 60% = 249 units within UGA	249 units within UGA

Using the projected new housing units identified above and the following growth assumptions developed during the comprehensive planning process, it is possible to determine if the Manson UGA has enough land to support the expected population growth. A list of assumptions about the future growth will set the perimeters for how much land is needed in the Manson UGA:

1. Residential Growth is preferred in the Manson UGA to preserve the rural and agricultural lands in the study area and beyond.
2. General lifestyles and living patterns will continue for the anticipated planning horizon of 20+ years.
3. Current trends in orchard production have leveled out, and a portion of the farm worker population has taken up permanent residence in the community. Additionally, some transient accommodations will remain to support labor and seasonal needs.

4. Tourism and other non-resource based economic development and trends will continue.
5. Overall persons per household within the community is expected to continue at 2.87 dwelling unit.
6. An average vacancy rate of 10% is expected throughout the planning area. A market factor of 20% is expected throughout the planning area.
7. Due to economic demand and historical use of land, it is expected that existing agricultural lands will develop at a slower rate (30%) than vacant lands (60%).
8. The percentage of land devoted to right-of-way, trails and infrastructure development is expected to be 30% of the overall developable land.
9. It is assumed that 5% of the planning area will remain un-built due to critical areas, especially related to steep slopes.
10. Housing densities are identified within the proposed comprehensive plan as follows:
    - Low Density Residential: 4 units per acre
    - Medium Density Residential: 8 units per acre
    - High Density Residential: 12 units per acre
    - Residential density calculation in the commercial zones (Downtown Commercial (CD) and Tourist commercial (CT)) shall be determined by maximum bulk, height and setback regulations.
11. It is not anticipated that any of the land owned by public entities will be available for residential development in the future.

Using the above assumptions about land uses, it is possible to calculate the amount of vacant and agricultural land expected to be available for future residential development. The following table provides a representation of the analysis of land available to accommodate the projected population within the Manson UGA.

Table Land Availability Analysis: Manson UGA

Comprehensive Plan Designations & Proposed Zoning	Agriculture	Conversion Rate	Right-of-way dedications	Critical Areas	Relative Housing Units
Low Density Residential (UR1)	181	54.3	38.01	36.1	145
Med Density Residential (UR2)	37	11.1	7.77	7.4	60
High Density Residential (UR3)	0	0.0	0	0.0	0.0
	Vacant				
Low Density Residential (UR1)	4	2.4	1.68	1.6	5
Med Density Residential (UR2)	17	10.2	7.14	6.8	55
High Density Residential (UR3)	2	1.2	0.84	0.8	10
	Parceled Lands	10% Conversion Rate			
Downtown Commercial (CD) and Tourist commercial (CT)	67	6.7	0 (already platted)	none	201
TOTAL					476

The land availability indicates that there is adequate land, based on the assumptions, for future population projections.

Land Use Concepts

Manson's land use designations are explained in this section. The designations are assigned to be generally consistent with the overall land use concepts and visions expressed by the community in the planning workshops.

Urban Land Use Designations

Residential Designations: The residential classifications are for areas which are, or will become, residential. Necessary public facilities and services, and uses consistent with the preservation and enhancement of the residential character, and the goals and policies of the comprehensive plan may be permitted under specific conditions. The three residential classifications are:

> **Urban Residential 1 (UR1) - Low-Density Residential –** The primary and preferred land use shall be single-family housing at a density of up to four dwelling units per acre. Land south of Hyacinth Road, along Lake Chelan, a density of up to 2.7 units per acre or 16,000 square foot lots is appropriate to preserve the character of the area and reduce impacts of development to the lake.
>
> **Urban Residential 2 (UR2) - Medium-Density Residential –** The primary and preferred land use shall be single-family and multi-family housing at a density of up to eight dwelling units per acre.
>
> **Urban Residential 3 (UR3) - High-Density Residential -** The primary and preferred land use shall be single-family and multi-family housing at a density of up to twelve dwelling units per acre.

Tourist Commercial (CT): The tourist commercial district is intended to apply to areas which are uniquely suited for motels, hotels, lodges, and the provision of goods and services oriented to accommodate tourists and recreational users. Commercial designations also can provide upstairs housing opportunities, which help to make communities more alive, attractive and vibrant places. Alternative parking options should be developed to facilitate new development and redevelopment of lands within this designation.

Downtown Commercial (CD): The downtown commercial district is intended for areas suited for retail, commercial, mixed small-scale uses with housing ideally on upper stories, and an active street environment with pedestrian amenities. Alternative parking options and parking behind or to the side of structures should be developed to facilitate new development and redevelopment of lands within this designation.

Manson Light Industrial (MLI): The Manson light industrial district is designed to allow warehouse industrial uses that are both already established in Manson, like fruit processing, and allow for establishment of desirable new warehouse/industrial uses in the Manson area. This area may also serve as a neighborhood employment center with some small scale neighborhood amenities.

Urban Public (UP): The public lands and facilities designation is intended to be applied within urban growth areas, to provide for open space and critical areas protection, recreational opportunities, sites for necessary public facilities, utilities and services and encourage joint public/private ventures where consistent with the goals and policies of the comprehensive plan.

Planned Agricultural Development (outside the UGA)

The Manson community cherishes its agricultural heritage, and is interested in finding ways to keep its agricultural economy thriving. But even today, market pressures exist to convert land from orchards to housing. As a result, the community sought to incorporate alternatives in this plan to help keep agriculture

viable, stemming the tide of single-family subdivisions encroaching into areas traditionally dedicated to farming.

The Planned Agriculture Development (PAD) provisions are structured similar to the County's Planned Development (PD) provisions, allowing deviations from normal code requirements in exchange for assurances that larger community-driven objectives will be met. In essence, the PAD would encourage continuation of rural patterns outside the UGA boundary, providing for small farming operations that focus on any, some, or all of the following:

- Agricultural experimentation
- Best Management Practices
- On-site sale of produce grown on-site
- Community agriculture and community gardens
- Farmers' markets
- Establishing and sustaining a more locally-based lifestyle, where products from local farms can be sold to local residents or visitors, allowing local families to support themselves entirely within the Manson study area.

The PAD provisions would also be tailored to address challenges this type of development presents. These provisions would be designed to answer concerns regarding pest management, encroachment into large-tract agricultural areas, storm water drainage, access, and visual impact, sign and sprawl abatement.

If implemented for Manson, Planned Agricultural Developments should be functionally and visually compatible with the rural landscape - featuring open spaces, outbuildings, widely separated residential structures, farmland, rural-style roads and the presence and activities of farming equipment. Typical uses may include:

- Single-family housing (intended for families taking part in agricultural activity)

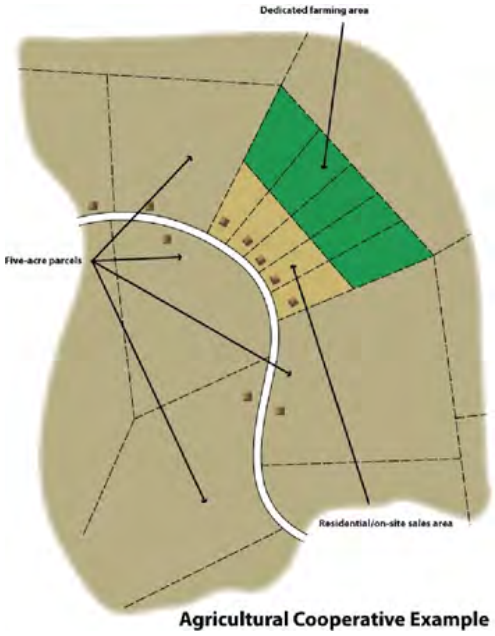


Figure 3.2 *– This example shows a planned agricultural development (PAD) designed as an agricultural cooperative.*

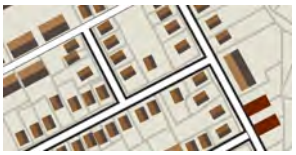
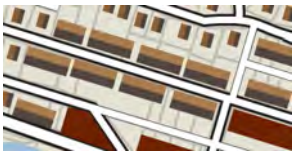
Figure 3.5 *– A schematic representation of Manson's central area at build out, showing how the commercial districts, shorelines, and residential areas could develop under the subarea plan's proposed comprehensive plan designations.*

- Nurseries
- Greenhouses
- Farming
- On-site sales
- Dining
- Public gatherings
- Parking
- Small animal sales
- Dog kennels
- Education and training
- Agricultural research
- Veterinarian services
- Agricultural cooperatives

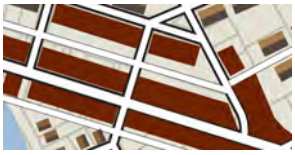
Illustrated Development Character

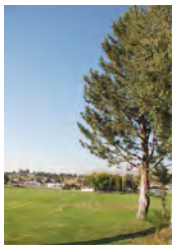
Overall, the comprehensive plan examines a variety of development options. Some areas will retain and expand urban character, including a mix of retail and housing within single, multi-story structures in Manson's core. Other areas will continue with less intensely developed land, featuring single-family neighborhoods on relatively large parcels. Still other areas may be expanded with industrial or agricultural uses to enrich and diversify Manson's economy. Each context is planned for by the range of comprehensive

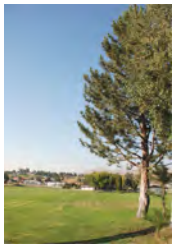




plan designations included in this plan, and the desire is to permit future development that contributes to and complements Manson's unique character (Figure 3.7).





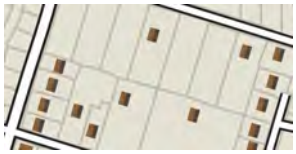


Urban Growth Area Designations

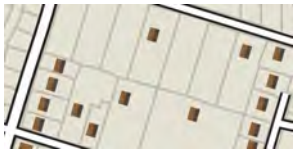
The urban concept area designations apply to those areas targeted for higher-intensity development within the urban growth area.

The following pages illustrate what development under the various districts may look like as Manson grows over time.

Table 3.4 – Plan Concept and Character Matrix - Urban



Land Use Concept	Comp Plan Designation	Concept Description	Character Image	Development Pattern
Low-Density Residential	UR1	The primary and preferred land use shall be single-family housing at a density of up to 4 dwelling units per acre.		
Medium-Density Residential	UR2	The primary and preferred land use shall be single-family and multi-family housing at a density of up to 8 dwelling units per acre.		
High-Density Residential	UR3	The primary and preferred land use shall be single-family and multi-family housing at a density of up to 12 dwelling units per acre.		
Downtown Commercial	CD	Uses will provide areas of complete retail facilities necessary for community services and convenience, including high-density housing ideally above the ground floor. Area should include alternative parking options.		



Land Use Concept	Comp Plan Designation	Concept Description	Character Image	Development Pattern
Tourist Commercial	CT	Uses will provide areas of complete retail facilities necessary for community services and convenience, including high-density housing at up to units per acre above the ground floor. Area should include alternative parking options.		
Urban Public	UP	Open space, protected critical areas, recreational facilities, necessary public facilities, utilities facilities, and community facilities are included in this designation.		
Manson Light Industrial	MLI	This designation provides for light-impact industrial uses within urban areas, providing employment opportunities near urban populations.		
Public	UP	Open space, protected critical areas, recreational facilities, necessary public facilities, utilities facilities, and community facilities are included in this designation.		

Rural Area Designations

The rural area designations are addressed in the County's Comprehensive Plan and summarized below in order to understand the regional land uses and possible future changes affecting the Manson Urban Growth Area. All references to density do not reflect agricultural housing or the accessory dwelling units permitted in Chelan County Code consistent with the goals and policies of the Chelan County Comprehensive Plan.

Table 3.5 – Plan Concept and Character Matrix - Rural

Land Use Concept	Comp Plan Designation	Concept Description	Character	Development Pattern
Commercial Agriculture	AC	This designation preserves commercial agricultural lands, encourages continued agricultural use as a foundation of the area's economy, and protects agricultural land of long-term commercial significance from encroachment of incompatible uses. Residential density is not to exceed one unit per 10 acres.		
Rural Residential/ Resource	RR2.5	This district buffers between rural areas of higher and lower intensity, including a mix of agricultural, residential and forestry uses. Residential density shall be no greater than one unit per 2.5 acres.		
Rural Residential/ Resource	RR5	This district includes small-scale agricultural activities and rural development consistent with the preservation of rural areas. Residential density shall be no greater than one unit per five acres.		
Rural Residential/ Resource	RR10	This district includes small-scale agricultural activities and rural development consistent with the preservation of rural areas. Residential density shall be no greater than one unit per 10 acres.		
Rural Residential/ Resource	RR20	This district includes small-scale agricultural activities and rural development consistent with the preservation of rural areas. Residential density shall be no greater than one unit per 20 acres.		

Land Use Concept	Comp Plan Designation	Concept Description	Character	Development Pattern
Rural areas of more intensive development	RV	This district is intended to permit residential development at densities no greater than one unit per 2.5 acres in places where residential development at densities greater than one unit per five acres already exists. Residential densities may vary depending on Health District standards for on-site sewage disposal.		
Rural areas of more intensive development	RW	Uses in this district include the development and infill of intensely developed shoreline areas for residential and water-related/water-dependent recreational and tourist development consistent with the rural character.		
Wapato	Wapato	The Wapato district recognizes the land held in Tribal trust or Tribal ownership.		

Goals and Policies

The following goals and policies are designed to guide the community's change over the coming years. The policies should guide the County's and Manson's day-to-day activities, and help each make decisions on land use applications, expenditures of public funds and other matters related to public governance.

All goals and policies here are derived from an extensive and inclusive public participation process.

Land Use

Goal LU-1: Achieve an efficient use of land in and around the Manson community, preserving existing Agriculturally-designated land, reducing urban sprawl and retaining Manson's natural-resource based rural and open-space character.

Policies

LU-1.A Work with the county and state to create, encourage, and support incentives for owners of existing Agricultural land to continue farming and improve the return to land.

LU-1.B When housing and other uses are developed in agricultural areas, maintain open space/agricultural preservation while providing adequate flexibility for owners.

LU-1.C Establish incentives to promote infill development within the existing UGA.

LU-1.D Ensure that any development in the UGA is fully served by water, wastewater and other necessary public services.

Goal LU-2: Support a vital commercial downtown in Manson.

Policies

LU-2.A Establish mixed-uses in the commercial designations, promoting a variety housing types, community parks, and a mix of retail and office spaces.

LU-2.B Create a town center concept that reinforces its identity as the "village by the bay."

LU-2.C Consider strategies to revitalize existing commercial corridor and reinforce its position as the local center for services, social, and cultural activities while providing for new areas of commercial development.

LU-2.D Encourage building height and bulk to permit viable residential use above ground floor retail while still preserving the character of the downtown core.

LU-2.E Encourage public access to the shoreline.

LU-2.F Promote adequate parking to support land uses, including alternative parking options.

Goal LU-3: Create enjoyable and safe neighborhoods that support a variety of housing types and income levels.

Goal LU-4: Support and encourage the existing areas in production and the diversification of new forms of appropriate agriculture and additional agricultural acreage.

Policies

LU-4.A Protect agricultural land of long-term commercial significance by encouraging innovative land use that supports agriculture.

LU-4.B Support agricultural land uses and innovative agricultural development within the study area.

Goal LU-5: Provide for adequate land uses which support employment and production of goods.

Policy

LU-5.A Support commercial activity use where appropriate and where impacts to surrounding properties can be avoided, managed, or mitigated in a manner compatible with neighboring uses, view retention goals and other aesthetics, and the community's rural character.

Goal LU-6: Allow for adequate space for necessary community facilities, such as schools, parks, playfields, houses of worship, and civic facilities.

Policies

LU-6.A Allow community facilities throughout the community, providing impacts to their surroundings can be avoided, managed or mitigated.

LU-6.B Encourage development of public parks along the shores of Lake Chelan, Wapato Lake, Roses Lake, Dry Lake and Antilon Lake.

LU-6.C Support development of trails and connectivity.

Goal LU-7: Plan, encourage and work to integrate open spaces throughout Manson to help retain the community's rural character.

Policy

LU-7.A In the case of clustered development, encourage remaining open spaces are arranged in a manner that protects agricultural, habitat and/or recreational functions.

Goal LU-8: Promote a cohesive rural village community character to residents and visitors.

Policies

LU-8.A Encourage preservation or the enhancement of views, natural features and landmarks as valuable community assets.

LU-8.B Develop architectural guidelines that encourage "village" scale and promote architecture that fit Manson's history and location.

LU-8.C Promote the lakeside destination character by blending natural and built environments along the approach to Manson.

LU 8-D Work with the County to establish a buffer between Manson and Chelan to help keep each community visually distinct.

Goal LU-9: Encourage housing and commercial development to reflect Manson's rural heritage and village image.

Policies

LU-9.A Promote visual character through the use of adopted design guidelines for all commercial, industrial, multi-family and tourist development projects along the gateway to Manson. Include "dark sky" lighting ordinances as appropriate.

LU-9.B Encourage limited or joint access points to Highway 150 from Winesap Road to downtown Manson to preserve traffic flow on the primary route.

LU-9.C Promote the development of trails and pocket parks along the gateway approach to Manson. Develop sidewalks along the main street within the urban growth area of Manson.

LU-9.D Develop incentives for bicycle and pedestrian connections along Manson's gateway route and to Lake Chelan.

LU-9.E Support design guideline development. Recommended design elements should include:

1. Utilize trees and landscaping to mitigate environmental degradation, and buffer land uses such as housing, commercial activities along Highway 150 and other potential entries to Manson.
2. Encourage agricultural vegetation as a component in the aesthetic and environmental quality of residential, commercial and commercial activity areas along the entry route to Manson.
3. Restrict height in the downtown area to 35 feet, with retail on the first floor and residential on the second and third floors.

LU-9.F Encourage a variety of housing and parking alternatives within the commercial areas.

Economic Development

Goal ED-1: Improve Manson's business diversity and year around economy.

Policies

ED-1.A Encourage economically-beneficial businesses that enhance year-round tourist industry, taking advantage of natural amenities, such as Lake Chelan.

ED-1.B Provide ongoing and current publicity, demonstrating the economic contribution of farming to the Manson area, and promote agricultural tourism with maps, u-pick fields, fruit stands and opportunities to taste or purchase agricultural products.

ED-1.C Coordinate public development activities with the City of Chelan, understanding that teamwork is more productive than competition.

ED-1.D Establish working, on-going contacts with appropriate public and private agricultural agencies to provide assistance to existing and potential owners supporting efficient farming of both larger and smaller plots of land.

ED-1.E Promote ties and links to outdoor recreational opportunities such as water sports, hiking, mountain biking, and winter activities.

ED-1.F Promote arts and entertainment events in Manson, and consider artist-in-residence programs to foster arts culture.

Environment

Goal EN-1: Maintain the quality of Manson's natural environment.

Policies

EN-1.A Maintain a parks and recreation plan that identifies both short and long-range needs for a system of publicly-owned open-space areas, recreational facilities and trails to meet the growing demand for recreational areas, facilities, programs and services.

EN-1.B Develop LEED (Leadership in Energy and Environmental Design) or other "green" building incentives to encourage development of less resource-consumptive projects.

EN-1.C Promote water conservation measures such as xeriscape.

EN-1.D Collaborate with City of Chelan and the Reclamation District on long-range wastewater treatment needs, managing growth with capacity.

EN-1.E Identify critical areas and shoreline buffers.

4 Housing

The housing chapter of this comprehensive plan is developed in consistency with the Chelan County comprehensive plan, relating information on Manson's existing housing environment and providing goals and policies to achieve the community's vision.

Existing Conditions

The majority of housing units in the Manson study area (72.6 percent) are detached, single-family dwellings. In 1990, the study area housing units were about 23 percent mobile homes. By 2000 only 17.9 percent of the housing units in the study area were mobile homes. Also, the number of multi-family units decreased from 254 units (18 percent) in 1990 to 56 units (4.2 percent) by 2000.

Table 4.1 – Census County Division Housing Units by Type, 1990 and 2000

	1990	Percent	2000	Percent
Single Unit	760	55	1,137	73
2-4 Units	54	4	84	4
Multi-Family (5 or more units)	254	18	56	4
Mobile Home	312	23	281	18
Boat, RV, Van, etc.	--	--	10	1
Total	1,380	100	1,568	100

Source: 1990 and 2000 Census data

The Washington State Office of Financial Management (OFM) is responsible for producing a range of population growth statistics for each county. The OFM also runs a program called the Small Area Estimate Program (SAEP), which projects population growth and housing units by year for Census Tracts and Block Groups. According to the SAEP, the Manson CCD gained 227 housing units between the Census in 2000 and the provisional estimate in 2006. The projected housing units needed to serve future population was addressed in Table 3.3.

Table 4.2 - Census County Division Population and Housing Units, Manson and Chelan County, 2000 to 2006

	2000 Total Population	2006 Total Population	Change 2000-2006	2000 Total Housing Units	2006 Total Housing Units	Change 2000-2006
Manson CCD	3,248	3,554	306	1,568	1,795	227
Chelan County	66,616	70,100	3,484	30,407	33,033	2,626

Source: Office of Financial Management, Small Area Estimate Program

Planning Concepts

The overall housing objectives are clear. Housing in the Manson should be affordable, attractive, and reflect the area's focused urban center. Housing within the UGA should be urban in nature, incorporating mixed use wherever possible and infilling wherever appropriate. A mix of single family and multi-family housing will be required to accommodate the projected population growth at proposed land use arrangements. More dense housing will be located adjacent to the Commercial designations to encourage residents to walk or use public transportation. Less dense housing will be encouraged toward the periphery of the UGA.

Goals and Policies

The following goals and policies are designed to help the County and the Manson community manage Manson's changing housing landscape. Each goal and policy supplements the County's comprehensive plan, and is customized to meet Manson's unique needs. All are based on direction provided during public workshops.

Goal H-1: Provide sufficient housing in Manson to provide dwellings for all income levels and for all needs.

Policies

H-1.A Monitor the land supply within the UGA to ensure adequate land is available to accommodate anticipated population growth.

H-1.B Locate housing targeted to low and moderate-income groups near employment centers and the commercial designations, helping to reduce transportation costs to access daily needs.

H-1.C Seek partnerships with regional housing authorities and other organizations to find and realize opportunities for providing housing for special needs or low-income households.

H-1.D Encourage diversity in housing types to accommodate an increasingly diverse population.

H-1.E Encourage increased density within the Commercial areas in support of year-around housing and diversity of housing options.

5 Transportation

Transportation systems are fundamental to the success and form of modern communities. Transportation systems provide access to resources and markets, underpinning basic economic activity. They also facilitate movement of community residents, providing the roadways, trails and sidewalks that people use to conduct their daily lives. Modes of travel in Manson include the private auto, public transportation, truck, boat, bicycle and walking, all of which place demands on and shape the facilities designed and developed to serve them.

The intent of the transportation element is to be consistent with the land use element as well as continuing the idea of coordinated planning efforts between the different agencies responsible for providing the different modes of transportation, such as County-wide Planning Policies and the North Central Regional Transportation Planning Organization.

Chelan County has updated its transportation element, which contains detailed information on the Manson area road conditions, level of service, short & long-term projects, and funding. The Manson residents support urban road standards that reflect their historical development patterns.

Existing Conditions

Public Transportation

The Chelan County Public Benefit Transportation Area (PTBA) – known as Link Transit - provides bus service with a circular route that travels between Chelan and Manson, and along Route 21 which connects Chelan and Manson to Olds Station in Wenatchee. In 2007, Link recorded 20,377 fixed boardings for the route that serves Manson and 66 average daily boardings. According to Link, boarding activity is higher between May and September, which may indicate a mix of seasonal workers and tourists in the area. In addition to walk-on passenger service, Link offers bike racks on all full size busses to aid multi-modal transportation.

Link has no current plans to expand public transportation service in the Manson area.

Non-Motorized Transportation

Sidewalks are provided in the commercial designations and many of the smaller streets that intersect Wapato Way in Manson's downtown district. A bicycle lane is included on SR 150, separated by motorized travel lanes by a stripe. Some roadways in Manson provide neither bike lanes nor sidewalks. Most are developed to rural standards with no sidewalk, curb or gutter. Although several of the roads have steep grades, curves and minimal policing, many pedestrians and cyclist are able to safely travel; however, there are know conflict areas that should be addressed. Manson's location on a hillside overlooking Lake Chelan makes any non-motorized travel from west to east above Wapato Way a scenic challenge.

In addition to the road system, the County Comprehensive Plan identifies a number of trail segments planned for completion in the seven- and 20-year planning horizon. These trails will be for non-motorized transportation throughout the area.

Planning Concept

Manson's residents overwhelmingly called for this to be a "pedestrian friendly" community, configured and developed to encourage pedestrian and bicyclist use. As such, the non-motorized use of Manson's transportation system should be considered every bit as important as motorized uses, and creating safe and attractive pedestrian environments, convenient linkages and the proximity between key land uses is a priority in this plan. While the hillside grade can make it difficult to access the town's eastern housing areas, pedestrian and bicycle travel parallel to the lakeshore and within the commercial designations is easy. To help make the commercial designations more conducive to non-motorized activity, this plan proposes construction of public parking areas, or "park-n-stroll" lots near the community's flatter areas.

While residents favor an intimate and slow-paced transportation system near the town's center, they also recognize the need for a fully functional transportation system to serve the agricultural areas surrounding Manson. These roadways will need to accommodate both farm traffic and surrounding residents who choose to live further from the commercial designations. As the UGA develops, the mix of farm traffic may diminish.

Goals and Policies

The following goals and policies are designed to help the County and the Manson manage its transportation system to ensure it functions both as a practical instrument for freight mobility and an attractive system sensitive to local access needs.

Goal T-1: Balance the demands of automotive transportation with Manson's desire to become a pedestrian friendly community.

Policy	
T-1.A	Work with County planners to identify and evaluate regional transportation corridors.
T-1.B	Incorporate traffic calming measures (such as textured crosswalks, streetscape design and roadway alignment) to slow traffic in the commercial designations and other locations frequented by pedestrians.
T-1.C	Develop a parks plan identifying key recreational and commuting pathways for pedestrians and cyclists to connect the community to Manson's parks and recreation opportunities. This may include abandoned right-of-way, such as reclamation flume lines.
T-1.D	Develop "park and stroll" lots for visitors and residents within one-half mile of the commercial designations.
T-1.E	Encourage alleys for the commercial designations and higher-intensity areas to reduce service vehicle intrusion and promote safe pedestrian sidewalks.
T-1.F	Encourage development of 'Park and Ride' facilities to support public transportation.

T-1.G Encourage sidewalks to be extended into existing residential, schools and other public facilities.

T-1.H Support alternative parking options to ensure an adequate parking supply within the commercial areas.

6 Capital Facilities, Utilities and Public Services

Existing Conditions

Water

The Lake Chelan Reclamation District (LCRD) provides much of the area with water services. The system had approximately 1,535 connections as of 2005 and serves as both the domestic drinking water purveyor for the area and the purveyor of irrigation water. The LCRD has two domestic water intakes, one booster pump station, one raw water reservoir, two finished water reservoirs and a water treatment plant. The service area is primarily within the lower valleys and extends up to elevations of 1,250 feet. The remainder of the area is serviced by private wells.

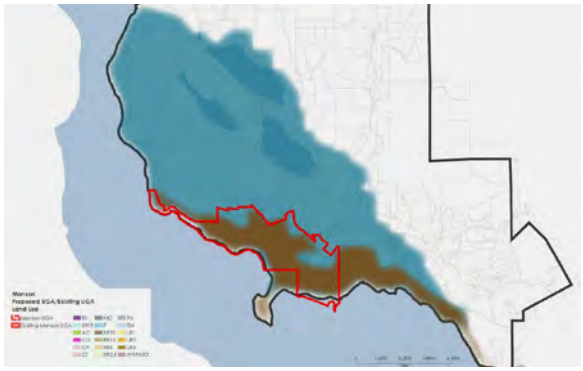


Figure 6.1 *- Representation of LCRD's water (blue for irrigation and brown for irrigation and water) and wastewater (brown) service areas in Manson.*

Table 6.1 – Water System Summary

	Max Day (cf)	**Total July-Aug** (cf)	**Year-to-Date Total** (cf)	**Unaccounted for Water** (cf)	**Percent Loss**	**Gallons per Capita per Day** (GPCD)
2003	247,193	11,876,471	35,924,970	3,727,550	10.4	118
2004	224,465	10,219,385	33,445,721	4,346,136	13.0	106
2005*	232,620	11,139,037	29,863,637	3,032,248	10.2	102

**2005 data is from January 1 through October 31, 2005 Major users of LCRD potable water are Wapato Point and the Mill Bay Casino. Although Wapato point and associated tribal trust lands are nearly developed to capacity, LCRD continues to plan for growth or increase in water usage on the land. Continued residential growth in the LCRD service area is largely in the form of second homes on the edges of the existing retail service area or within potential expansion areas. While customers in this area do not use water year round, their homes do need water, and therefore have an impact on the water provision. Non-residential usage growth is largely centered on the agricultural and wine industry. Wash water and other industrial uses of water are commonly provided through the separate non-potable irrigation system.*

Future expansion of service areas outside of the existing retail services area have been identified at the following elevations: 1,250 to 1,500; 1,500 to 1,750; and 1,750 to 2,000. Expansion has been identified by elevation because each new elevation will require an associated booster pump to reach customers and

provide fire flows. The LCRD 2005 Domestic Comprehensive Plan suggested that extending potable water service into the foothills surrounding the village of Manson would be expensive and require significant pumping efforts. However, the LCRD plan indicates that extending into the foothills is likely due to poor ground water quality in the area, and the increased need for potable water and fire flows as development occurs.

Water Utility Level of Service

- Average Day Demand (ADD): 1,032 gpm (0.51 gpm per ERU)
- Maximum Daily Demand (MDD): 1,315 gpm (0.65 gpm per ERU)
- Peak Hour Demand (PHD): 1,861 gpm (0.92 gpm per ERU)
- Fire Flow: 1,000 gpm for two hours within Urban Growth Area, 750 gpm for two hours in remainder of the area.
- Minimum Pipe Sizes: six inches

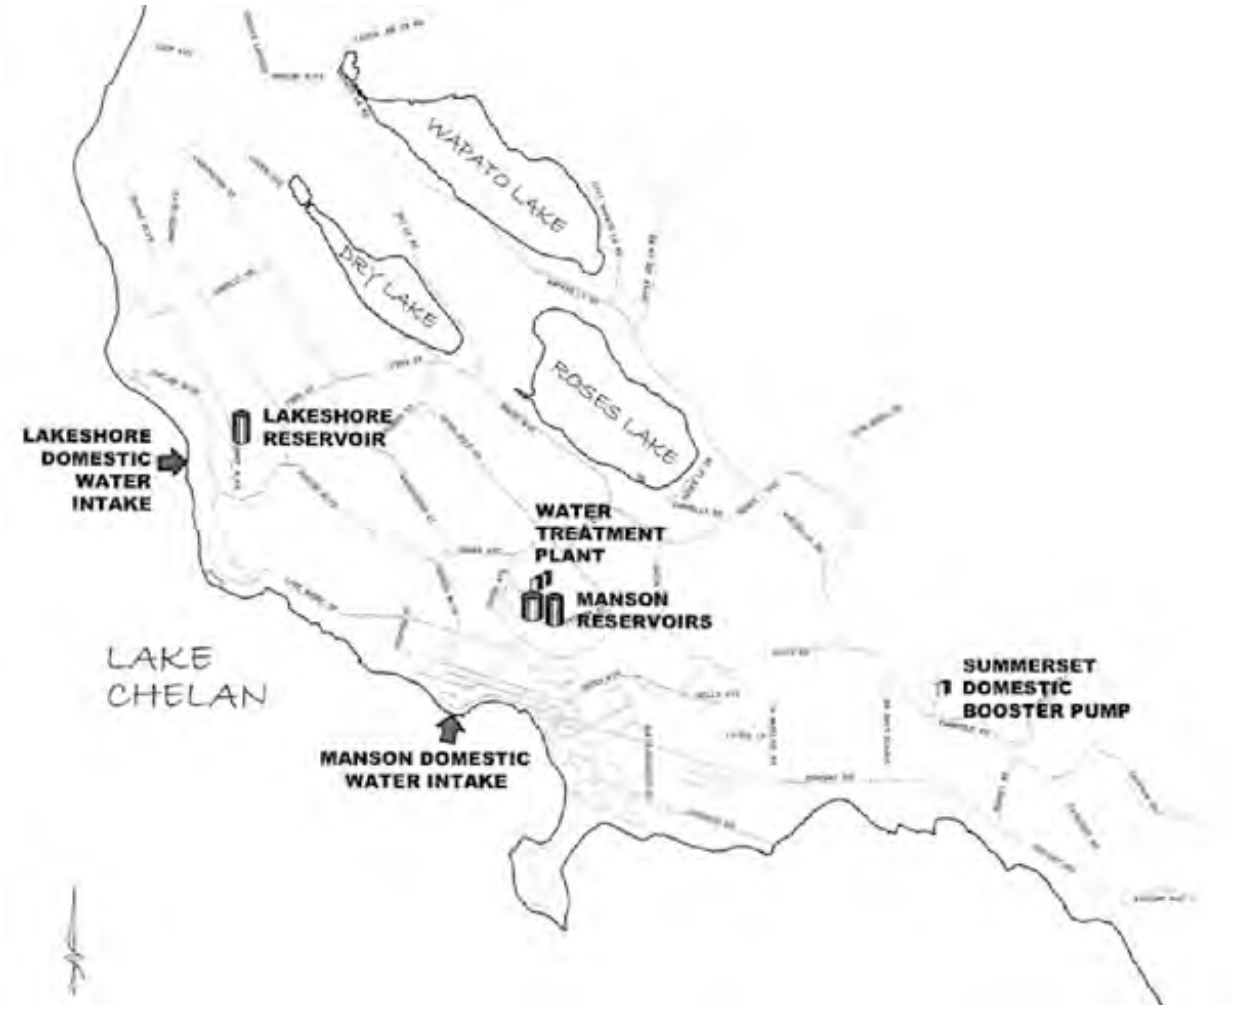

***Figure 6.2** – Manson water/sewer treatment and distribution system*

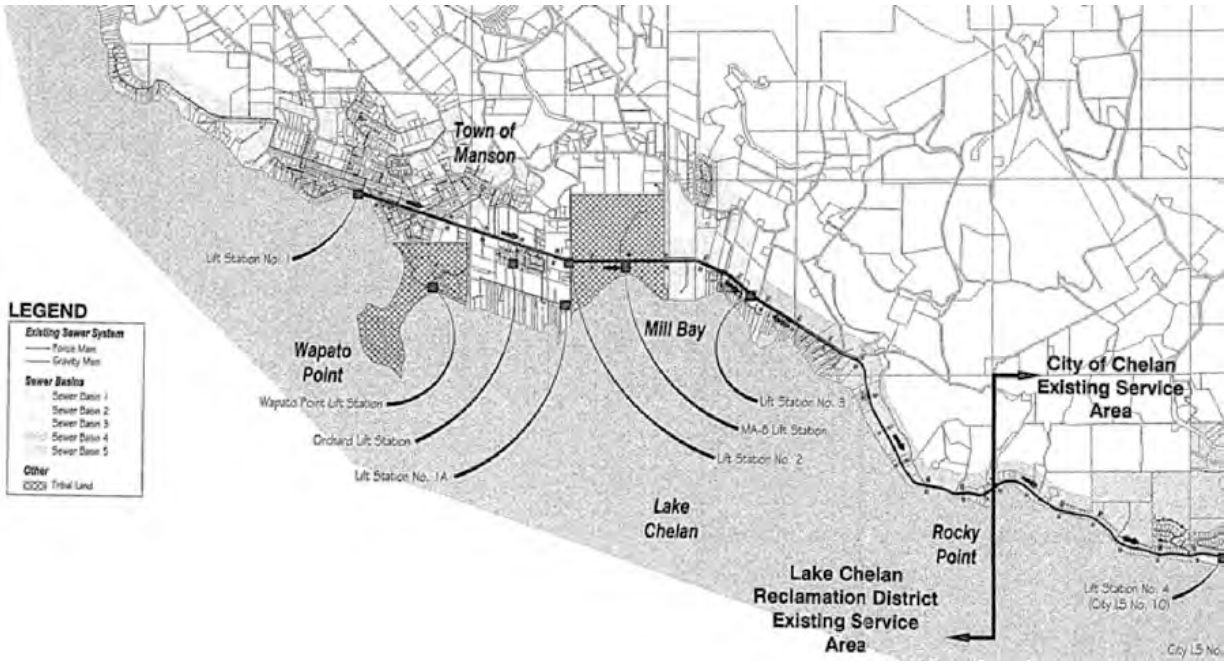

Figure 6.3 *– Existing sewer system, Lake Chelan Reclamation District*

Irrigation

LCRD also provides non-potable water to the area's crops, residents and wineries. The irrigation service area is much larger than the domestic service area and is served by a separate system of pumps, pipes and turnouts that do not provide potable water. The system provides water to 660 connections along the distribution system. Between the months of March and October each year users withdraw 22,388 acre-feet of irrigation water across the entire system.

Wastewater

LCRD provides wastewater collection, conveyance and treatment services, with its treatment services connected to the City of Chelan. The LCRD has approximately 1,500 ERU in the Manson area. Continued expansion of wastewater service in Manson is vital accommodate the growth expected to occur in the proposed UGA.

The Lake Chelan Reclamation District provides sewer service in the Manson UGA and in some of the areas just outside of the UGA as well as the City of Chelan. The entire system handles about 393,000 gallons of wastewater per day. Per-ERU average daily residential flow during peak months is about 238 gallons per day and this average serves as the planning number for the LCRD when forecasting future needs.

Lake Chelan water quality is a primary concern for both residents and wastewater planning efforts. According to the 2002 General Sewer Plan, 16 septic systems in the planning area had reported failures. While the Department of Health requires all failed septic systems within 200 feet of sewer service connect to the system, the Lake Chelan Water Quality plan suggests that all failed septic system users within 500 feet of existing service lines hook up to sewer.

According to the District, current wastewater demand is at one-half the contracted capacity, implying that there is adequate capacity to serve anticipated development in accordance with this comprehensive plan. Complete system maps are available in the LCRD 2002 General Sewer Plan.

Stormwater

The study area is along Lake Chelan, an oligotrophic[3] body of water, which contains nine known pollutants[4]. A group of Mason community members, called the Lake Chelan Water Quality Advisory Group, and Chelan County Public Works has completed a Storm Water Management Plan in 2002. This plan identifies options for reducing pollutions from Lake Chelan. In order to implement the Plan a Stormwater Utility is being established.

Parks

The Manson Park District operates five parks in the area: Manson Bay Park, Old Mill Park, Singleton Park, Willow Point Park, and Wapato Lake Campground. Each park has various specialties and activities for residents.

Table 6.2 – Manson Parks and Recreation District Facilities Inventory

Park	Acres	Activities	Future Improvements
Manson Bay Park	2	Lake views, swimming area, picnic area, restrooms, 30 slip marina, marine dump station and winter only boat launch	Additional moorage facilities, moving the breakwater to allow more depth for winter boat moorage due to low lake level, additional parking, additional picnic and swimming areas
Old Mill Park	23	Four-lane boat launch, short-term moorage, picnic area, restrooms, marine dump station, boat trailer parking	Development of recreation vehicle and tent camping facilities, complete with restrooms and showers, concession area, walking trails, sport court, additional tables and barbeques

[3] A lake with low productivity resulting from low nutrient content. These lakes have low algal production, and consequently, often have very clear waters, with high drinking-water quality. (Wikipedia)

[4] Lake Chelan Water quality Plan 1991: (1) suspended sediments and particulates from erosion; (2) automotive-generated heavy metals such as lead, zinc, copper and cadmium; (3) oil and grease; (4) nutrients such as nitrogen and phosphorous; (5) salt deicing agents; (6) fecal related bacteria from pet and livestock wastes; (7) pesticides used for residential and roadway shoulder weed control; (8) various other deleterious toxic inorganic and organic chemicals which may originate from traffic accident related spills and residential/business discharges; and (9) floatable debris.

Park	Acres	Activities	Future Improvements
Singleton Park	10	Baseball fields, soccer field, basketball and pickle ball court, picnic gazebo, restroom facilities, concession area	Access road improvements, parking, safety improvements, Manson park maintenance building expansion, walking trails, running track, drainage improvements
Willow Point Park	2	Swimming and day use, three barbecues and picnic tables	Shoreline restoration, improvements to parking, restrooms, universal access, additional barbeques and picnic tables
Wapato Lake Campground	9.24	Boat launch, 31 recreational vehicle and 11 camp sites with camp ground host, electrical and water hookups trailer dump site, two boat docks, picnic area with gazebo, swimming, restroom and shower facilities	Boart launch ramp safety improvements, TV and internet access, concession store, access road improvements, RV parking improvements, additional fire rings and picnic tables

Schools

Manson School District #19 provides educational services to the area's young population. As of October 2006, District #19 had 632 students enrolled - 333 elementary and 299 junior/senior high school students. Over 65 percent of students enrolled in District #19 are Hispanic. Nearly 70 percent of students receive free or reduced lunch. According to the Chelan County Comprehensive Plan, 2004, the District needs to update its transportation facilities and the football field.

Sheriff

The Chelan County Sheriff's Office provides police protection services to the Manson area. Deputies work out of an unmanned office just east of Chelan.

Fire District

District #5 operates two fire stations inside the region and serves 18 square miles of urban growth area and rural land. The main station located in downtown Manson has two fire engines/pumpers, one bush truck, and one ambulance/aid car. The second station on Wapato Lake Road has one pumper, one tender/tanker, and two brush trucks. The district maintains approximately 27 volunteers.

Chelan County Fire Marshal and Chelan County Fire District #5 work closely with LCRD to provide adequate fire flows within the retail service area boundary. All hydrants fed by LCRD water are numbered, flow tested and rated to meet the highest standards to help the district maintain a high rating with the Insurance Services Office. Washington State's Survey and Rating Bureau lists District #5 at a "six" on a scale of 1 to 10.

Needs

According to virtually all of Manson's service providers, there is adequate capacity to accommodate forecast growth and development. The Manson School District, however, has indicated that additional classroom space may be necessary if the anticipated population growth includes families with school-age children. The District already owns enough land to accommodate a facilities expansion if necessary.

Manson's Parks and Recreation District states its parks facilities are at capacity, particularly those along the lakeshore and in downtown. Any significant population growth will likely impact its facilities and motivate improvements to satisfy demand. The District will need to update its parks and recreation plan to assess population growth impacts and establish strategies for maintaining service levels.

Planning Concepts

Manson's community wants its provision of public services to keep pace with demand. This process has indicated that the most pressing need is for management of surface runoff, Storm Water Management, and for continued vigilance to ensure that schools and public safety services can meet the increased demand that population growth will bring.

Concentrating a large proportion of the forecast growth within and adjacent to the commercial designations supports the existing infrastructure and minimizes the cost of new services. Other areas now designated for urban development within the UGA are located within the LCRD's water and wastewater service areas, ensuring that public utilities will be readily available when new growth occurs. Land beyond the wastewater service area is designated for rural uses.

Manson's commercial designations are an established urban area, but an increased population in and around the immediate core will place increased demands on parks and public parking facilities. This plan recommends an update to the Manson District's parks and recreation plan, and the provisions for "park-n-stroll" lots on downtown's periphery to serve the commercial designations area.

Goals and Policies

The following goals and policies are designed to help the County and Manson manage how the comprehensive range of capital facilities, utilities and public services are provided to meet the community's needs. Each goal and policy supplements the County's comprehensive plan and is customized to meet Manson's unique needs. All are based on direction provided during public workshops.

Capital Facilities

Goal CF-1: Ensure roads, storm water facilities, parks, trails, and other publicly owned facilities meet changing community demand.

Policies

CF-1.A Work cooperatively with the County, City of Chelan, State Department of Transportation, and the Regional Transportation Planning Organization to periodically study roadway use and create or revise capital facilities plans.

CF-1.B Support a storm water management strategy, including new organizations and/or land owner agreements, as appropriate, to manage storm water runoff responsibility.

CF-1.C Encourage parks and trails facilities be addressed within capital facilities plans for the County and/or Manson Parks and Recreation District, as appropriate.

CF-1.D Fairly allocate costs for capital facilities improvements, particularly in the case of system expansions and rehabilitation.

CF-1.E Support efforts to provide public parking within easy access of downtown.

Utilities

Goal U-1: Ensure water, wastewater, storm water, telephone, power, and other utilities meet changing community demand.

Policies

U-1.A Encourage continued collaboration between the Lake Chelan Reclamation District, ~~and the~~ City of Chelan and other appropriate entities to ensure Manson's~~-~~ systems can meet expected growth.

U-1.B Support the implementation of a Storm Water Utility.

U-1.C Notify utility providers of any subdivisions, site-specific zone changes or comprehensive plan amendments that may impact demand for services.

U-1.D Collaborate with utility providers to improve the utility systems' resilience in times of natural disaster.

Public Services

Goal PF-1: Ensure public services, including public safety services, schools, library services and others, adapt to meet changing community demand.

Policies

PF-1.A Coordinate with the Manson School District to monitor school capacity and plan for facilities expansion as necessary.

PF.-1.B Seek ways to provide law enforcement services necessary to meet the needs of Manson's growing population and seasonal popularity.

PF-1.C Coordinate with Chelan County Fire Protection District 5 and Lake Chelan Valley Emergency Medical Services to ensure fire protection and emergency medical services can adapt to address changes in community demand for service.

PF-1.D Coordinate with North Central Washington Regional Library District to provide library services to the Manson community.

7 Parks and Recreation

Existing Conditions

The Manson Park District operates five parks within the area: Manson Bay Park, Old Mill Park, Singleton Park, Willow Point Park, and Wapato Lake Campground. Table 6.2 shows the acres, activities available and future improvements planned for each park.

The Manson Parks and Recreation District adopted a comprehensive plan in 2006. Within it are the district's goals and objectives to drive parks planning into the next 20 years. The following information and goals are provide to guide land use policies within the Manson UGA.

Plan Concepts

Parks are and will continue to be a big part of life on the shores of Lake Chelan. Manson residents and visitors already thoroughly enjoy the community's existing parks, and the District plans to continue improving and adding to those parks in the future. The goal for this element is focused both on providing parks to Manson area residents, and on providing services to the area's visiting population. The goals and policies of this comprehensive plan promote the increased connectivity of parks and urban areas through trail systems. The plan also supports the interconnectedness of parks and the other elements of the plan by emphasizing the need for partnerships between agencies working in Manson.

Goals and Policies

The following goals and policies are designed to help the County and the Manson community manage Manson's changing parks and recreation environment and promote future development which supports the comprehensive plan. Each goal and policy is based on direction provided during public workshops and on information provided within the adopted parks and recreation plan.

Goal PR-1: Provide an integrated parks and recreation system to meet the community's needs, including the needs of the area's seasonal or day-use visitors.

Policies

PR-1.A Support efforts to ensure opportunities to enhance or expand the community's inventory of parks and trails are realized.

PR-1.B Develop partnerships with other agencies to provide additional parks, trails and recreation facilities.

PR-1.C Create an integrated system of trails to link the commercial designations with the "park and stroll" lots designed to serve it, and the community parks and public facilities.

PR-1.D Identify public right of ways that could be used for future recreational uses to include micro parks and trail systems.

8 Implementation Projects/Programs

Plans are only as good as their implementation. This section is intended to identify specific actions that Manson and Chelan County can take to implement this comprehensive plan. Understanding that public funds will likely continue to be scarce into the future, these implementation items are designed to be relatively inexpensive, bite-size steps that the community can take over time. Some will certainly need public funding to accomplish, but others may be able to be completed on the basis of community volunteerism and official County endorsement.

The various implementation programs and projects are described in Table 10.1, including references to the appropriate plan policies, the item's relative priority, who is responsible for its implementation, and when the task should be undertaken.

Table 10.1 – Implementation Programs/Projects

Project	Policy Key	Priority	Responsibility	Timing
Drainage district – A drainage district will enable Manson to raise funds for necessary storm drainage system planning and development. This district would levy a small local tax and manage surface flow through the study area.		1	Public Works	2010
Drainage master plan – As Manson grows, storm water management will become an increasingly important concern. New development increases surface flow and consumes land otherwise available to accommodate it. The drainage master plan will investigate and propose strategies to deal with storm water challenges, identifying management policies and drainage-related improvements.		1	Public Works	2009
County updates – This area plan includes proposed policy to manage change in Manson over the coming years. A major component of that policy involves changes to the way land use develops in and around Manson. Possible changes include changes to the County Comprehensive Plan and codes.		1	Planning	2011
Downtown design guidelines – The community expressed concern that Manson's downtown retaining its intimacy even as population in Manson grows and bring visitors through the development to the east to downtown businesses. The design guidelines would support Manson's goals and character.		3	Planning	2010

Project	Policy Key	Priority	Responsibility	Timing
Regional agricultural economic assessment – Central Washington's agricultural sector has been the force behind the region's economic fortunes. As that sector responds to national and global forces, local economies rise and fall. Farmland around Manson is undergoing pressure to convert out of apple orchards. This economic assessment will help the community anticipate changes ahead and draft appropriate public policy.		1	Planning	2010
City center revitalization strategy – A fundamental underpinning of this plan is the concentration of development and social activity in and around Manson's downtown. The focus on the village should be unequivocal, and a revitalization strategy will help Manson create a downtown that is attractive, functional and dynamic.		2	Planning	2011
Affordable housing strategy – Whether it takes the form of attached housing in the core or small-lot single family housing on the community's edges, more affordable housing options need to be explored. This strategy will provide an assessment of current conditions and lay out steps the community can take to ensure that Manson's households can live more affordable lifestyles.		2	Planning	2011
Comprehensive plan review – Jurisdictions are mandated to review their long-range land use plans periodically, ensuring that the policies and land use designations are appropriate in the face of changing conditions.		2	Planning	2015
Parks plan update – The Manson Parks and Recreation District prepared a parks and recreation plan in 2004. This was updated in the 2008 County Parks and Recreation Plan. Future updates will ensure that the district's system meets community demand and that they remain eligible for grants from the State's Recreation and Conservation Office.		3	Parks District	2014

Monitor Rural Community Vision Statement

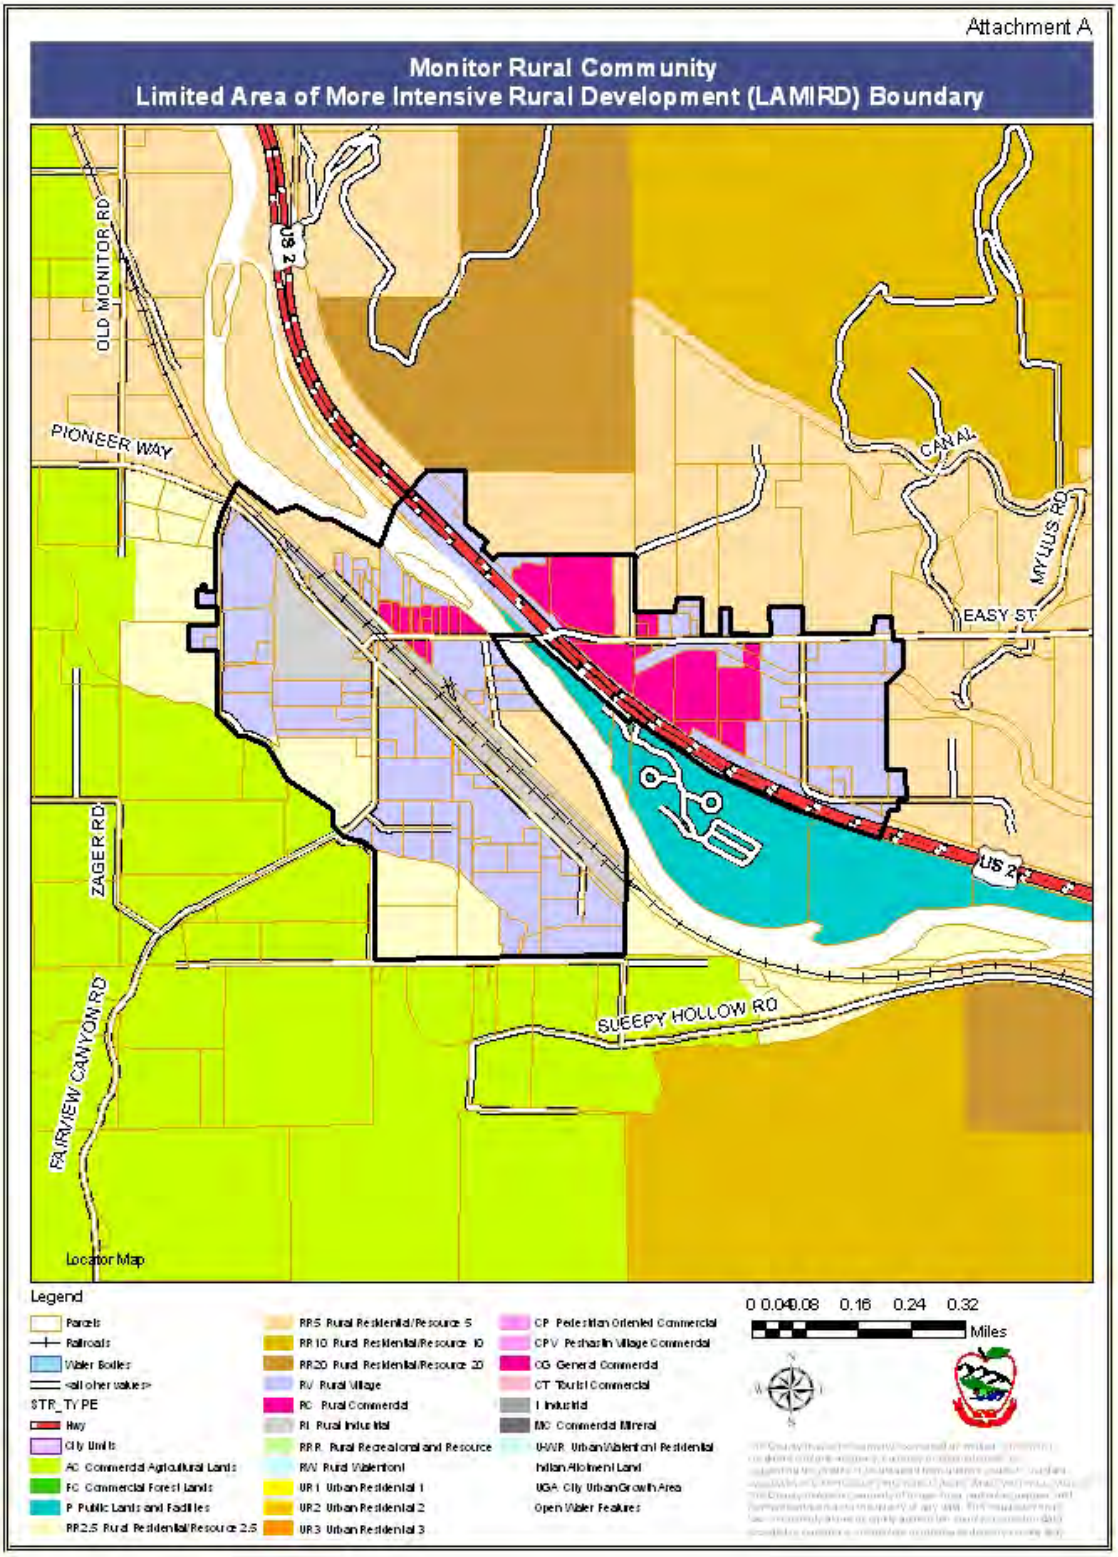
The citizens of the Monitor Rural Community envision and support:

1. Future development that will complement and enhance and not unreasonably impact our natural resource-based industries, including our agricultural industry and agricultural tourism, and the forest and mineral resources industries;

2. An economic and educational climate that enables our citizens to find suitable employment within the valley;

3. Sustainable growth that can be served effectively and efficiently with the necessary public services and facilities, while enhancing our community's quality of life;

4. Recreational open spaces and opportunities, including along the rivers and streams, to preserve the community's rural character, conserve fish and wildlife habitat, and increase access to natural resource lands and water, and maintenance and development of parks, sports fields and facilities;



5. Protection of the environment and maintenance of the community's high quality of life, including air and water quality, and the availability of water;

6. Protection of private property rights of landowners;

7. Adequate housing that fulfills the housing needs of all segments of the population; and

8. Efficient transportation systems that allow the movement of goods, services and people.

Table P-4: Proposed Land Use Designations: Peshastin UGA
Table P-5: Existing Vacant and Agricultural Land: Peshastin UGA
Table P-6: Land Availability Analysis: Peshastin UGA

The citizens of Peshastin envision a community that provides:

1. Future development that complements and enhances the rural character of the community, without unreasonable negative impacts.

2. An economic and educational climate that enables citizens to find suitable employment within the valley;

3. Sustainable growth that can be served effectively and efficiently with the necessary public services and facilities, while keeping it cost effective, to enhance our community's quality of life;

4. Open spaces and recreational opportunities, particularly the rivers and streams;

5. Protection of the environment and maintenance of the community's high quality of life, including air and water quality, and the availability of water;

6. Protection of private property rights of landowners;

7. Adequate housing that fulfills the housing needs of all segments of the population;

8. A transportation system that allows for the efficient movement of goods, services, and people within the community;

9. For maintenance of the area's uniqueness, and combines a quality rural small-community lifestyle with a diversified economic base that allows orderly growth and development while preserving the beauty of the area;

10. Varied levels of development with suitable mitigation.

Chapter 1: Introduction

History of the Peshastin Community

The Great Northern Railway played an important part in the creation of the Community of Peshastin. The small town was established around 1890, with a post office and tavern. In 1892, the Northern Pacific Railway laid tracks up the Wenatchee River Valley and the town was moved to where it is today. At this time, a depot was created in Peshastin.

First owned by the Northern Pacific Railway, Peshastin was later bought by Aquillar Estes. J.Q. Gilbert later purchased Peshastin and it was plotted as a town. Many of the first structures in Peshastin were built by J.Q. Gilbert and his brother A.C. Gilbert including a 120,000 gallon reservoir and pumping station later used to supply the town with domestic water.

Growing up as a railroad town the small community, like many in the Wenatchee River Valley, was soon well known and well established as a fruit grower's haven. In the early days apples were the high commodity fruit, while today, a larger variety of fruits are being grown around the area. The tradition of fruit harvest has been passed down from generation to generation in this small community, a tradition that makes this small community beloved by those that live and work there.

Purpose

The Comprehensive Plan for the Peshastin Community is intended to be a guide for the physical growth and development of the community and its immediate surroundings for the foreseeable future that encompasses the next twenty (20) years. It provides goals, policies and recommendations to be used as official policy guidelines that will enable county and community leaders to make informed decisions that are in the best interest of the community as a whole.

The Plan is also intended to help maintain reasonable continuity in future decision-making as changes occur within the community's leadership and the County's legislative body. It furnishes direction for the development of the community which will make it a more convenient, attractive and orderly place in which to live, shop, work and play. However, the Plan must be periodically reviewed and updated to reflect technological, social, economic and political changes that may invalidate certain plans and policies. For the purposes of the Peshastin Sub-area, a minimum seven year update is recommended, to be prepared in association with updates in population, land use and capital facility information.

First in 1935 and again in 1990, the State Legislature realized the necessity for planning ahead, and enacted legislation that granted local governments the authority to plan for the future development of their particular jurisdiction. The primary emphasis of the Growth Management Act (RCW 36.70A) is coordinated, cooperative planning efforts, with substantial, continuous input from all sectors of the population that will help balance the scales between economic development and environmental preservation. It also became a responsibility of local governments to follow through with the citizens' vision for their community by implementing the direction laid out in the comprehensive plan with compatible development regulations such as zoning and subdivision codes.

The following fourteen goals are those broad issues that the State legislature through adoption of the Growth Management Act in 1990 and 1991, charged local government to address, as they pertain to the particular community:

Urban Growth... Encourage development in urban areas where adequate public facilities and services exist or can be provided in an efficient manner.

Reduce Sprawl... Reduce the inappropriate conversion of undeveloped land into sprawling, low-density development.

Transportation... Encourage efficient multimodal transportation systems that are based on regional priorities and coordinated with county and city comprehensive plans.

Housing... Encourage the availability of affordable housing to all economic segments of the population of this state, promote a variety of residential densities and housing types, and encourage preservation of existing housing stock.

Permits... Applications for both state and local government permits should be processed in a timely manner to ensure predictability.

Environment... Protect the environment and enhance the state's high quality of life, including air and water quality, and the availability of water.

Economic Development... Encourage economic development throughout the state that is consistent with adopted comprehensive plans, promote opportunity for all citizens of this state, especially for unemployed and for disadvantaged persons, and encourage growth in areas experiencing insufficient economic growth, all within the capacities of the state's natural resources, public services, and public facilities.

Property Rights... Private property shall not be taken for public use without just compensation having been made. The property rights of landowners shall be protected from arbitrary and discriminatory actions.

Natural Resource Industries... Maintain and enhance natural resource-based industries, including productive timber, agricultural, and fisheries industries. Encourage the conservation of productive forest lands and productive agricultural lands, and discourage incompatible uses.

Open Space and Recreation... Encourage the retention of open space and development of recreational opportunities, conserve fish and wildlife habitat, increase access to natural resource lands and water, and develop parks.

Citizen Participation and Coordination... Encourage the involvement of citizens in the planning process and ensure coordination between communities and jurisdictions to reconcile conflicts.

Public Facilities and Services... Ensure that those public facilities and services necessary to support development shall be adequate to serve the development at the time the development is available for occupancy and use without decreasing current service levels below locally established minimum standards.

Historic Preservation... Identify and encourage the preservation of lands, sites, and structures, that have historical or archaeological significance.

Shorelines…For shorelines of the state, the goals and policies of the Shoreline Management Act (RCW 90.58.020) are added as one of the goals of the GMA (RCW 36.70A.020).

On the pages to follow are listed the primary goals and policies of the residents of Peshastin that help define their priorities in dealing with all of these issues. These goals and policies are intended to also express what the citizens of Peshastin see as the future of their community.

Authority

The Growth Management Act (GMA) is the enabling legislation that renders this Sub-Area Comprehensive Plan a legally recognized document by the State of Washington; however, it is a policy document only. The policies are required by GMA to be implemented through the use of such regulatory tools as zoning and subdivision ordinances, as well as other innovative techniques. These regulations must be developed and maintained in accordance with the goals and policies of this Sub-Area Comprehensive Plan, as set forth in the Growth Management Act, as amended.

Scope and Organization

This Comprehensive Plan is composed of the five required elements, as provided for in RCW 36.70A.070 and 36.70A.080, and two optional elements that must be closely interrelated to serve as a satisfactory guide for future development:

The Land Use Element
The Housing Element
The Utilities Element
The Capital Facilities Element
The Transportation Element
The Optional Elements: Recreation and Economic Development

Plan Development and Public Participation

The comprehensive plan for the Peshastin area was originally incorporated as part of the overall Growth Management Act planning program initiated by Chelan County and its communities. However, in 2005 the Peshastin Community Council initiated a community wide meeting to discuss infrastructure needs and future development. The Council invited agencies to present information at a community meeting held on October 18, 2005 to discuss with residents updated information on different projects. Agencies attending included Chelan County Planning, Chelan County Public Works, Peshastin Water District, Chelan County PUD, and the Chelan Port District.

Subsequent to this community meeting, the Council created a special subcommittee called the "Peshastin Zoning Committee." This Committee considered and discussed many concepts for land use, development and future growth of the community through meetings, surveys, agency meetings. The Committee recommended to the Community Council that a request be sent to Chelan County to initiate the process to create and establish an Urban Growth Area (rather than a Limited Area of More Intense Rural Development). Part of this request included a proposed urban growth area that the committee and Council had crafted through their self-directed efforts. This request was agreed to and forwarded by the Council on June 12, 2006.

Following the submission of the request to complete a sub area plan for the community, the Council created a subcommittee known as the "Urban Growth Task Force," and initiated, in April of 2007, a process to work on the Peshastin Subarea Plan and UGA Comprehensive Plan. This Task Force met

monthly with planning staff to outline and, develop strategies, and to establish baseline concepts for creation of the Comprehensive Plan and land use designations.

In July of 2007, the Board of County Commissioners hired Alliance Consulting Group to develop the background data, facilitate continued public participation, and bring together the necessary components of the Peshastin Urban Growth Area Plan. The Task Force met many times through April 17, 2008. Each meeting typically included 20 or more participants, and included considerable progress with additional meetings set to resolve time intensive and difficult issues. During this time, the Council also sponsored public outreach meetings, including an introduction of the project at the annual Peshastin Ice-cream Social in July of 2007, and an "Agencies Special Meeting" to discuss specific infrastructure (existing and proposed) needs with residents and service providers. The Task Force presented an initial full draft of the Peshastin Urban Growth Area Comprehensive Plan and implementing development regulations to the public at an Open House in May of 2008. Following this open house, the Task Force forwarded their recommendation to the Community Council, which held a public hearing on June 12, 2008. At this hearing, the Council made minor modifications to the Task Force recommendation, and forwarded the draft documents to Chelan County. In addition to the GMA-required 60-day review, the County Planning Commission conducted one public workshop and one public hearing to review and recommend a draft Peshastin Urban Growth Area Comprehensive Plan. The Board of County Commissioners conducted a public hearing in September of 2008, which was continued to October of 2008, at which time the plan was adopted.

Background Information and Land Use Analysis

The Peshastin Sub-Area and the proposed Urban Growth Area (UGA) are made up of the historical community of Peshastin along with the surrounding rural and agricultural areas. The boundary was developed through a community visioning process that included the Community Council, residents and staff from the Chelan County Community Development Department. Considerations included parcel lines, topography, special districts (particularly the water and sewer districts) and 2000 US Census boundaries.

The Peshastin Sub-Area is 1,285 acres in size and the proposed Urban Growth Area is 610 acres, including right of way and surface water (Wenatchee River). The following technical analysis includes descriptions of existing conditions, as well as analyzing population projections and future land use needs, based on the goals, policies and land use designations identified in this plan. Map P-1 shows the extent of the Peshastin Sub-area, and the proposed urban growth area within it, as well as showing the existing County Comprehensive Plan land use designations/zoning districts. (All maps referenced are provided at the end of this chapter.)

Geographically, the area is bounded by hills and divided by the Wenatchee River Valley. The area is primarily dependent on the surrounding agricultural activities and businesses for its base economy. There are recreational activities associated with the Wenatchee River, federal forest lands and open spaces. Agriculture, the predominant land use in this area, consists largely of irrigated orchards. Where land is undeveloped, it is typically dominated by shrub-steppe or dry ponderosa pine plant communities. The average annual precipitation ranges from 22 to 24 inches.

Existing Comprehensive Plan Land Use Designations & Zoning Districts

The existing Chelan County Comprehensive Plan land use designations and corresponding zoning districts within the sub-area and proposed UGA are detailed below in Table P-1 (also see Map P-1). Currently, the proposed Peshastin UGA is predominantly designated Rural Village with 25.5% of the area in this designation, followed by Rural Industrial at 19.5%, Rural Residential/Resource 2.5 at 19%, Rural Residential/Resource 5 at 13.2% and Rural Commercial at 12.5%. The remaining designations (see

Table P-1), and including right-of-way and surface water, comprise 10.3% of the total land area in the proposed UGA.

Table P-1. Existing County Land Use Designations/Zoning: Peshastin Study Area – 2007

	Sub-Area		Proposed UGA	
Zoning	**Acres**	**Percent**	**Acres**	**Percent**
Commercial Agriculture	499	38.8	0	0.0
Peshastin Village Commercial	3	0.2	2	.3
Public	21	1.6	20	3.3
Rural Commercial	75	5.8	75	12.4
Rural Industrial	129	10	118	19.5
Rural Residential 2.5	211	16.4	120	19
Rural Residential/Resource 10	10	0.8	0.0	0.0
Rural Residential/Resource 5	123	9.6	80	13.2
Rural Village	157	12.2	154	25.5
Rural Waterfront	14	1.1	14	2.3
Sub-Total	**1242**	**96.5**	**583**	**95.5**
ROW/Surface Water*	43	3.3	27	4.5
Total	**1,285**	**100**	**610**	**100**

*This category is approximate based on the overall area within the boundaries identified, less the land area contained within the polygons associated with all land use designations/zoning categories.

Existing Land Use Inventory

The Existing Land Use Inventory Map P-2 and Table P-2 demonstrate the distribution of existing land uses throughout the community, based on County Assessor data and an aerial photograph analysis conducted during the summer/fall of 2007. The data collected was initially categorized into a number of land use types, based primarily on the Assessor's land use classification system. Further refinement of the data resulted in the following land use categories being identified for purposes of this analysis:

- Agriculture includes parcels that are primarily devoted to agricultural activities, and may include residential uses as secondary activities.
- Forest includes heavily timbered areas that are part of the National Forest, and may include residential uses as secondary activities.
- Single Family Residential includes a single home (including manufactured homes) as the primary activity.
- Multi Family Residential includes apartments, duplexes, condominiums and mobile home parks.
- Commercial includes any retail and/or service activity, and may include residential uses as secondary activities.
- Industry encompasses industrial activities, including agriculture related industrial uses.
- Transportation/Utilities includes any transportation, utility and/or irrigation activities that are occurring on fee-owned land, and excluding any facilities within right-of-way corridors.
- Public/Quasi-Public includes public facilities such as fire stations, libraries, parks, school, etc.
- Vacant includes parcels that are currently unimproved and/or unused.

The "Residential" category represents a majority of the land used for traditional dwelling units, including single family, multi-family and manufactured/mobile home residences. Included in the "Public" classification are all of the parks, schools, play fields and federal, state and county owned facilities. The

commercial lands are located primarily along the historical Main Street adjacent to the railroad. Industrial activities occur between the railroad and the Wenatchee River.

Table P-2. Existing Land Use Inventory: Peshastin Sub Area – 2007

	Sub-Area			Proposed UGA		
Existing Land Use	**# of Parcels**	**Acres**	**Percent**	**# of Parcels**	**Acres**	**Percent**
Agriculture	81	779	60.6	36	219	36.2
Forest	5	35	2.7	0	0	0.0
Single Family Residential	237	157	12.2	225	131	20.8
Multi Family Residential	15	2	.2	15	2	0.3
Commercial	16	25	1.9	18	25	4.1
Industry	9	46	3.6	8	42	6.9

Total	**385**	**1,285**	**100**	**315**	**610**	**100**

*This category is approximate based on the overall area within the boundaries identified, less the land area contained within documented Assessor's parcel data.

Existing Population and Housing

Due to variations between the boundaries of the census blocks and the overall Study Area, the existing population and housing information is taken from the 2000 US Census, and is estimated for the Peshastin Sub Area boundary. In some cases information was available only for entire block groups instead of the individual census blocks. In these cases, the existing land use inventory, aerial photographs and available census data were used to estimate information for the study area.

Table P-3. Existing Population and Housing Units: Peshastin Sub Area – 2000 US Census

Area	**Population**	**Housing Units**
Proposed UGA	697	269
Peshastin Study Area	1060	409

According to the 2000 US Census, the average household size in the Peshastin Sub Area is 2.59 people. Of the total population in this area, 68.5% of the population marked "white alone" as their race, with 28% marking "hispanic or latino" (the remaining 3.5% were in other categories).

Future Land Use and Population Analysis

As part of the planning process, the Peshastin community has been working to identify desired future land uses, and to encourage those future land uses by implementing new comprehensive plan land use designations and corresponding zoning districts within their proposed urban growth area (UGA). During this particular process the remaining portions of the Peshastin Study Area, outside the proposed UGA, are anticipated to remain in the same land use designations that currently existing (Map P-1). As proposed, the community has identified a traditional balance of land uses between residential, commercial and industrial uses, although within those categories, there are some areas that will allow for a mixed variety of

activities. Map P-3 shows the distribution of the proposed land use designations identified below for the Peshastin UGA.

Table P-4. Proposed Land Use Designations: Peshastin UGA

Proposed Land Use Designation	Acres	Percent	
Low Density Residential (R-1)	212	35.1	
Medium Density Residential (R-2)	62	10.2	
High Density Residential (R-3)	13	2.1	47% Residential
Downtown Commercial (C-D)	29	4.8	
Highway Commercial (C-H)	75	12.4	17% Commercial
Campus Industrial (I-C)	65	10.7	
Industrial (I)	101	16.7	27% Industrial
Public (PU)	21	3.5	
Sub-Total	578	95.5	
ROW/Surface Water*	32	4.5	9% Miscellaneous
Total	610	100	

*This category is approximate based on the overall area within the boundaries identified, less the land area contained within the polygons associated with all land use designations/zoning categories.

The Growth Management Act requires that urban growth areas include enough land at sufficient densities to accommodate projected population growth for the next 20 years. Future population for all counties is determined by the Washington State Office of Financial Management. The counties then allocate the expected population growth to different areas within the county. In 2002, Chelan County, in cooperation with the cities, developed a population allocation methodology that was first outlined in a draft Memorandum of Understanding, and subsequently adopted into the County Comprehensive Plan, that set out population allocations for the overall County. As part of that process, it was anticipated that a future urban growth area would be defined in the Peshastin area because there were existing urban services (transportation, public domestic water and public wastewater collection and treatment systems), and an allocation of 1100 people (total) in the year 2025 was established for that future UGA. This is the number that has been used to plan for the Peshastin Urban Growth Area. Table P-5 identifies the projected growth of population in both the overall Peshastin Study Area, and in the proposed UGA.

Table P-5. Population Projections: Peshastin Study Area and Proposed UGA

Year	**1980**	**1990**	**2000**	**2010**	**2015**	**2020**	**2025**
Proposed Peshastin UGA	508	573	697	859	940	1,021	1,100
Housing	*196*	*221*	*269*	*332*	*363*	*394*	*425*
Peshastin Sub-Area	754	850	1,060	1,272	1,393	1,514	1,634
Housing	*291*	*328*	*409*	*491*	*538*	*585*	*631*

To determine the number of housing units, the population information was divided by the US Census "people per household" resulting in an estimated 269 homes within the proposed UGA in the year 2000. This is consistent with the land use inventory which indicates 224 single family residents and 15 multi-family parcels (containing an estimated 40-60 residential units). Using the population projection of 1,100 people, it is estimated that 425 housing units will be needed in the year 2025. This estimate should be expanded to provide for a natural vacancy rate and a market factor. A market supply factor is important to a community for the purposes of maintaining a choice and selection of residential locations, of maintaining a five year housing supply at all times and to build a reserve of residential land area. For the purposes of calculating the affect on land necessary for housing, a market factor of 20% percent is

used. The expected housing growth between 2000 and 2025 for the proposed UGA, based solely on population projections, is an additional 156 homes; however, when a vacancy rate and market factor are factored into the analysis, the projected additional housing units necessary for the Peshastin UGA is 203 homes by the year 2025.

Where there is currently vacant and agricultural land within the proposed UGA, it is anticipated that future development would occur most readily. As described in the table below, there are approximately 229 acres of agricultural land and 78 acres of vacant land available for various residential or mixed use residential developments in the proposed UGA. However, it is not anticipated that all of these lands will convert within the planning period, and is dependant upon a number of factors, including the availability of infrastructure, the productivity of the land and the owner's desires. Table P-5 demonstrates the distribution of existing vacant lands and agricultural activities, based on the proposed comprehensive plan land use designations for the proposed Peshastin Urban Growth Area.

Table P-5: Existing Vacant and Agricultural Land: Peshastin UGA

	Actual Land Uses							*Total**
Proposed Land Use Designation	Single Family Residential	Multi-Family Residential	Agriculture	Commercial	Industry	Public/Quasi Public	Vacant	
Low Density Residential (R-1)	60.4	-	131.5	-	-	0.3	2.2	*194.4*
Med Density Residential (R-2)	30.5	-	56.0	-	-	-	1.8	*88.3*
High Density Residential (R-3)	8.3	0.6	-	0.3	-	-	-	*9.2*
Downtown Commercial (C-D)	10.3	1.1	-	3.1	-	-	-	*14.5*
Highway Commercial (C-H)	16.1	-	17.3	7.8	-	-	0.6	*41.8*
Campus Industrial (I-C)	-	-	-	-	-	-	64.4	*64.4*
Industrial (I)	5.0	-	24.1	13.8	41.5	5.0	8.8	*98.1*
Public (P-U)	-	-	-	-	-	21.1	-	*21.1*
*Total**	*130.6*	*1.7*	*228.9*	*25.1*	41.5	26.4	*77.9*	*532.0*

*Total acreage is based on parcels excluding right-of-way

Using the projected new housing units identified above and the following growth assumptions developed during the comprehensive planning process, it is possible to determine if the Peshastin UGA has enough land to support the expected population growth.

1. General lifestyles and living patterns will continue for the anticipated planning horizon of 20+ years, to the year 2025.
2. Current trends in orchard production have leveled out, and a portion of the farm worker population has take up permanent residence in the community. Additionally, some transient accommodations remain to support labor and seasonal needs.
3. Tourism and other non-resource based economic development and trends will continue.
4. Overall residential density within the community is expected to continue at 2.59 dwelling units per acre.

5. An average vacancy rate of 10% is expected throughout the planning area. A market factor of 20% is expected throughout the planning area.
6. Due to economic demand and historical use of land, it is expected that existing agricultural lands will develop at a slower rate (25%) than vacant lands (60%).
7. The percentage of land devoted to right-of-way, trails and infrastructure development is expected to be 30% of the overall developable land.
8. It is assumed that 5% of the planning area will remain un-built due to critical areas, especially related to steep slopes.
9. Housing densities are identified within the proposed comprehensive plan as follows:
   - Low Density Residential: 4 units per acre
   - Medium Density Residential: 8 units per acre
   - High Density Residential: 16 units per acre
10. The Highway Commercial, Downtown Commercial and Campus Industrial designations allow for residential mixed-use development. It is anticipated that these designations will allow 10% of all development as residential units.
11. It is not anticipated that any of the land owned by public entities will be available for residential development in the future.

Using the above assumptions about land uses, it is possible to calculate the amount of vacant and agricultural land expected to be available for future residential development. Table P-6 provides a representation of the analysis of land available to accommodate the projected 1,100 people in the Peshastin UGA in the year 2025.

Table P-6 Land Availability Analysis: Peshastin UGA

Proposed Zoning	Agriculture	Conversion Rate	Right-of-way dedications	Critical Areas	**Relative Housing Units**
Low Density Residential (R-1)	131.5	32.9	23.0	21.9	**87.4**
Med Density Residential (R-2)	56.0	14.0	9.8	9.3	**74.5**
High Density Residential (R-3)	0.0	0.0	0.0	0.0	
Downtown Commercial (C-D)	0.0	0.0	0.0	0.0	
Highway Commercial (C-H)	17.3	4.3	3.0	2.9	**2.3**
Campus Industrial (I-C)	0.0	0.0	0.0	0.0	**0.0**
Industrial (I)	24.1	6.0	4.2	4.0	**3.2**
	Vacant				
Low Density Residential (R-1)	2.2	1.3	0.9	0.9	**3.6**
Med Density Residential (R-2)	1.8	1.1	0.7	0.7	**5.6**
High Density Residential (R-3)	0.0	0.0	0.0	0.0	
Downtown Commercial (C-D)	0.0	0.0	0.0	0.0	
Highway Commercial (C-H)	0.6	0.4	0.3	0.2	**0.2**
Campus Industrial (I-C)*	64.4	64.4	45.1	33.8	**27.0**
Industrial (I)	8.8	5.3	3.7	3.5	**2.8**
				TOTAL	**206.7**

*Due to current efforts it is expected that this site will develop within the 20 year planning horizon. Furthermore known critical areas on this site increase the assumed 5% ratio to 20%

Based on the population projections a demand for future housing was estimated at 203 units. The land availability indicates that there is adequate land, based on the assumptions, for future population projections.

Capital Facilities

Capital facilities include public water, public wastewater collection and treatment, public roads and streets, power, communication, police and fire protection, solid waste, and school systems serving the area. Emergency services consist of a volunteer fire department and County police protection. The post office, volunteer library, volunteer fire station, school and grange make up the public buildings. The elementary school offers some recreational opportunities with play, track and football fields. Maps P-4 through P-6 show the general location of the domestic water and wastewater systems in the area, as well as the transportation facilities that currently serve the community.

Peshastin Water District:

The Peshastin Water District water system was initially implemented as a private facility in the early 1900's. The Community Water Association took over managing the system in 1927. It became the public water system it is today in September 1999, after a district-wide vote. The purpose of forming the District was to assume the operation and maintenance of the financially failing Community Water Association. The Water District has three employees, a Certified Water Manager, a Certified Cross Connection Technician and a district secretary/bookkeeper. The District is governed by three water commissioners that are publicly voted into office. Regular pubic meetings are the held the second Tuesday of each month at the Peshastin Public Library.

The Water District includes three active wells, one inactive well, and three reservoirs – two that store 250,000 gallons each and one smaller 30,000 gallon reservoir. There are approximately four miles of pipe serving 238 customers, including residential, commercial, and industrial uses, an elementary school and a day care center. In 2002 a water right transfer was approved allowing additional water withdrawals from four existing wells and two new wells that may be developed by the District to meet source protection and supply concerns. Currently, the Washington State Department of Health Water Facilities Inventory has approved 598 active connections.

In the summer of 2005, property owners from the Timberline Water Users Association, seven residential properties and a commercial business approached the Peshastin Water District requesting water to serve their small water system due to lack of water supply. The District applied for and received grant funding totaling $108,500 from the Department of Ecology Emergency Drought Fund to install a temporary 2" water line across the Peshastin Bridge to serve these users.

Peshastin Domestic Water Users Association:

This water system serves both sides of the highway from the Peshastin Bridge to the intersection of US Highway 2 and 97 (Big Y). This association is drafting its first full comprehensive water system plan, due to be completed by 2009. An estimated 45 homes and 6 businesses are served by the system.

Chelan County Public Utility District Wastewater System – Peshastin:

The Peshastin wastewater system serves the community of Peshastin and is located along the north side of the Wenatchee River three miles east of Leavenworth. The system is a step tank, force main collection system with a secondary treatment plant that discharges to the Wenatchee River.

Currently, there are 125 residential connections, 4 commercial connections, 2 industrial connections and 6 institutional connections. The projected maximum demand is 110,000 gallons per day (GPD), through the year 2020, which is the design capacity of the system. The existing maximum month flows are around 60,000-70,000 gpd; however, the amount of phosphorous discharge may be reduced causing the system to be upgraded or limit the GPD.

In the future, upgrades will most likely be necessary to reach the projected population needs of the Urban Growth Area, as it is projected that an extra 30,000 gpd will be needed for the residential expansion and with the extra Industrial and Commercial growth, the 110,000 gpd will most likely be exceeded.

Transportation Facilities:
The existing circulation pattern in Peshastin is oriented to State Highway 2 and Main Street, which run perpendicular to each other, and to the Blewett Pass Interchange. The constraints associated with crossing the Wenatchee River and Burlington Northern Railroad include an existing bridge and underpass, respectively. The community is currently serviced by State Highway 2, Blewett Pass interchange, and many smaller arterials, that can serve the needs of the area with some restricted access off of State Highway 2 and Blewett Pass interchange. LINK transit provides bus service to Leavenworth and Wenatchee. Sidewalks are limited and patchy throughout the community. There are no bike lanes within the Peshastin area; however, many cyclists use the area to avoid highway travel and there are cycling competitions in the area every year.

The Blewett Pass Diamond Interchange ("Big Y") is described by the Washington State Department of Transportation (WSDOT) as an improvement that includes realignment of US 97 to cross US 2 approximately 1100 feet west of the existing Blewett Junction intersection. A county road to the north will be constructed that roughly parallels US 2, creating a new T-intersection with the US 97 crossroad and connecting to Saunders Road and Jeske Road. Existing US 97, north of the Blewett Cutoff Road intersection, would become a dead-end, local access road. At-grade access to US 2 from Blewett Cutoff Road, Saunders Road, Doghouse Road, and Jeske Road would be closed but access would be provided via the proposed interchange. At the time this sub area plan is being developed, the County is completing a Countywide Transportation Element update that uses this plan as the baseline for analysis of necessary transportation improvements to serve the area for the next 20 years and beyond.

UGA Location
It is the position of the Peshastin community that the UGA identified in the comprehensive plan is consistent with the Growth Management Act and the Chelan County Regional Policy Plan. The UGA is located in such a manner that urban levels of services either already exist or can be extended. With sewer and water already located within the planned UGA, and with room to expand these services, the goals and policies of the Growth Management Act and the Chelan County Regional Policy Plan are satisfied.

Relationship to County-wide Plan

This document is a Sub-Area Plan that is consistent with the goals and policies of the Chelan County Comprehensive Plan. It is a free standing document that is meant to be used in conjunction with that of the County's Comprehensive Plan. WAC 365-195-335 and the GMA allow for the creation of Urban Growth Areas that are supported by County-Wide planning policies. This Plan has been developed within the scope, framework and intent of the existing comprehensive plan, particularly with regard to the land use and population projections and the particular utility plans which are included in the existing plan by reference. This Plan will further the overall goals of the GMA, particularly as they pertain to realistic and feasible growth and development. Below are the County Wide Planning Policies that are furthered by the adoption of this sub area plan.

Policy #1 Policies To Implement RCW 36.70A Relating To The Establishment Of Urban Growth Areas.

I. Each city within Chelan County will be included within a designated urban growth area.

According RCW 36.70A.110, An urban growth area may include territory that is located outside of a city only if such territory already is characterized by urban growth whether or not the urban growth area includes a city, or is adjacent to territory already characterized by urban growth, or is a designated new fully contained community as defined by RCW 36.70A.350. The Peshastin community includes all of the necessary components to be deemed and demonstrate that it meets the characteristics for and of urban growth.

II. *Designated urban growth areas should include an adequate amount of undeveloped area to adequately accommodate forecasted growth and development for the next 20 years.*

As demonstrated within Table P-5 and P-6 with associated narrative, the UGA can accommodate growth and development.

III. *Designated urban growth areas should include those portions of our communities already characterized by urban growth that have existing public facilities and service capacities to serve such developments as well as those areas projected to accommodate future growth.*

The review of the capital facilities (above) demonstrates the existence of the urban services for the Peshastin community.

IV. *The formal designation of urban growth areas should be accomplished as a part of the comprehensive planning process. The size of designated urban growth areas should be based on projected population, existing land use, the adequacy of existing and future utility and transportation systems, the impact of second home demand, viable economic development strategies and sufficient fiscal capacity within the capital facilities plan to adequately fund the appropriate infrastructure necessitated by growth and development. Consideration should also be given to regularize grossly irregular corporate boundaries during the process of designating urban growth boundaries.*

Analysis of population, growth, land use, and infrastructure has concluded that the established UGA boundary meets the above policy.

V. *Communities should consider the development and use of ten and twenty-year population forecast to assist in the process of preparing plans for growth management. Such forecast would provide substantial benefit, particularly in the preparation of utility and transportation plans and for the capital improvement plans to implement the same.*

Table P-4 and associated narrative include 20-year forecasts for population and land use growth. The Chelan County Capital Facilities and Transportation Elements include necessary 20-year project improvements to meet the needs of the forecasted growth

VI. *In recognition of the potential for the development of new fully contained communities Chelan County may reserve a portion of the twenty-year population project and offset urban growth areas accordingly for allocation to a new fully contained community.*

At the time of writing this document, the residents of Peshastin expressed no desire to become incorporated.

VII. *Community comprehensive plans should contain annexation and/or incorporation elements. Areas for potential annexation or potential incorporation should be designated in portions of urban growth areas outside of cities.*

At the time of writing this document, the residents of Peshastin expressed no desire to become incorporated, and is separated from any municipality within proximity of the UGA. See Policy No. 1 (I) above regarding incorporation.

VIII. When the county has adopted a comprehensive plan and development regulations under the Growth Management Act, the Board of County Commissioners should evaluate any future need for the boundary review board.

The Peshastin Community Council recommends to the Board of County Commissioners approval of the UGA Comprehensive Plan, Boundary, Land Use Designation and supporting Development Regulations. Through the public participation process involving several years of outreach, residents of Peshastin have provided support for the UGA.

Policy #2 Policies For Promoting Contiguous And Orderly Development And The Provision Of Urban Governmental Services To Such Development.

I. For proposed developments which are within the urban growth boundary, but beyond municipal boundaries, the following policies should be considered:

A. Improvement standards for new developments proposed within urban growth areas should be jointly developed by the county and appropriate city. Standards should address such improvements as street alignment and grade, public road access, right-of-way, street improvements (which may include street width, curbs gutters, and sidewalks, etc.), sanitary sewer, storm water improvements, park and recreation facilities.

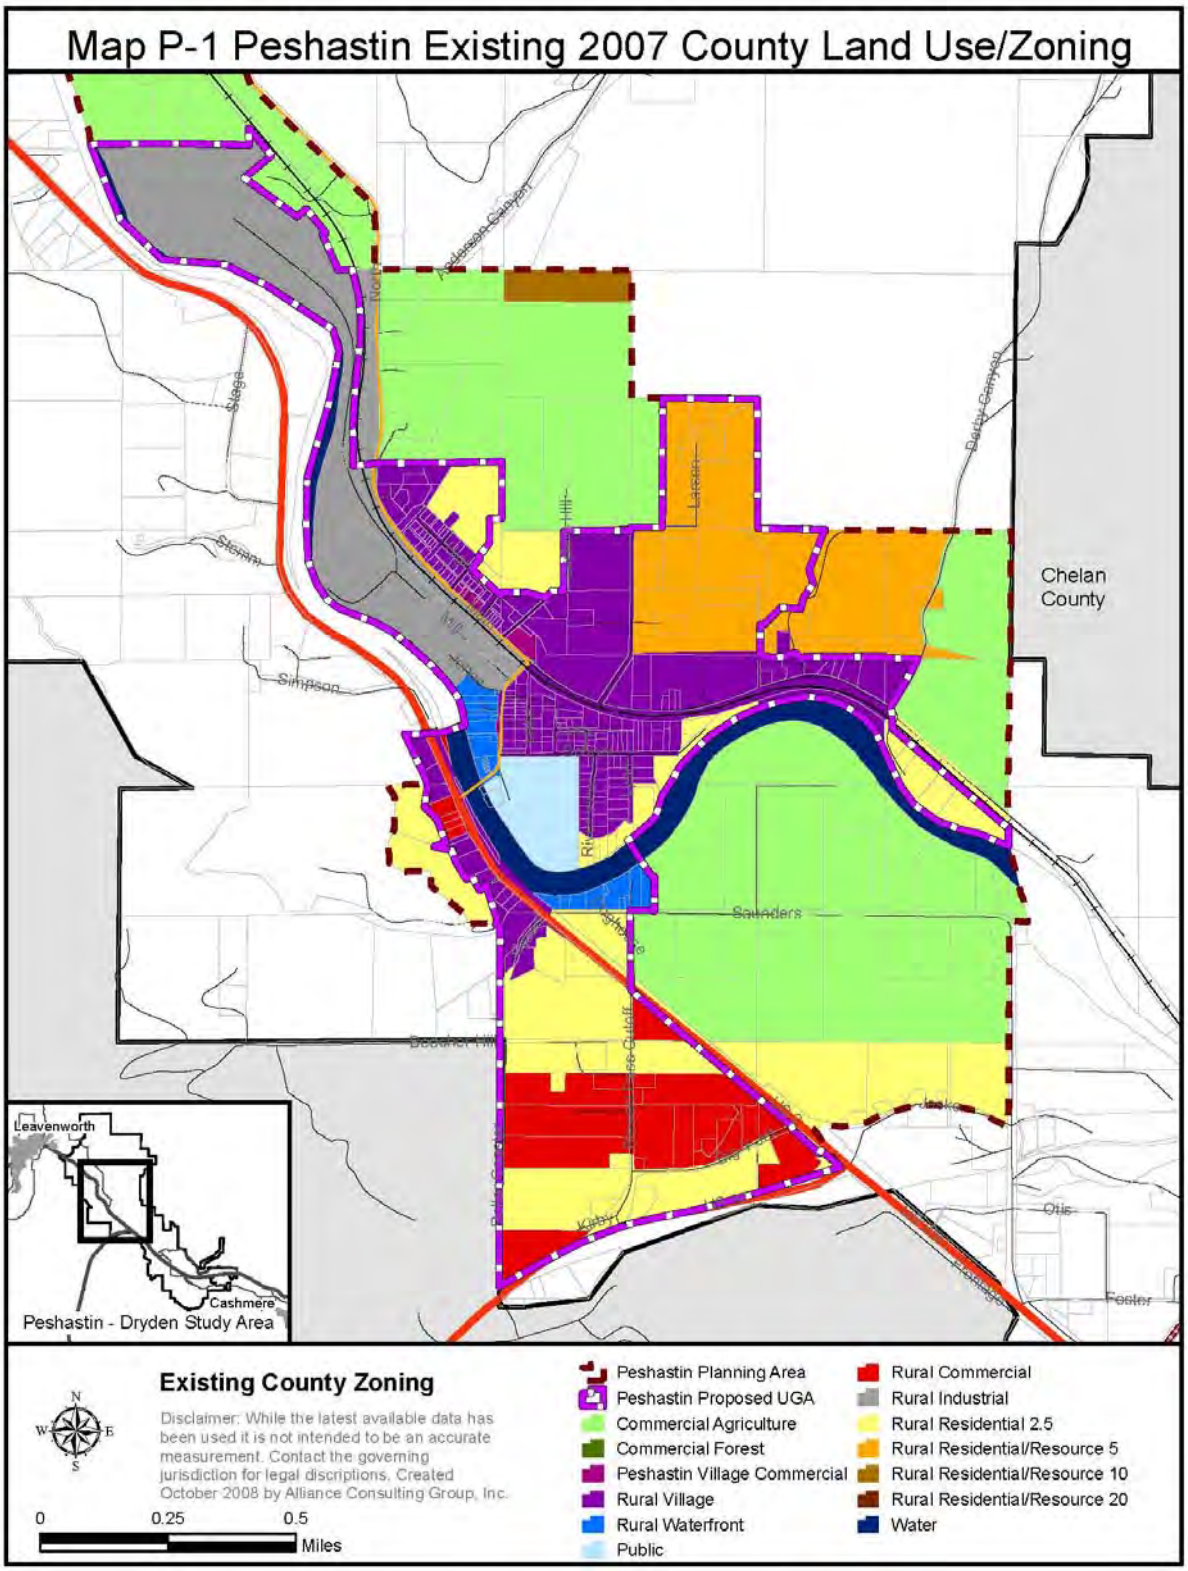
B. All projects will be reviewed to ensure compatibility with urban density projections of the urban comprehensive plan.

C. The timing of utility extensions into the urban growth area shall be consistent with the adopted capital facilities plan of the utility purveyor.

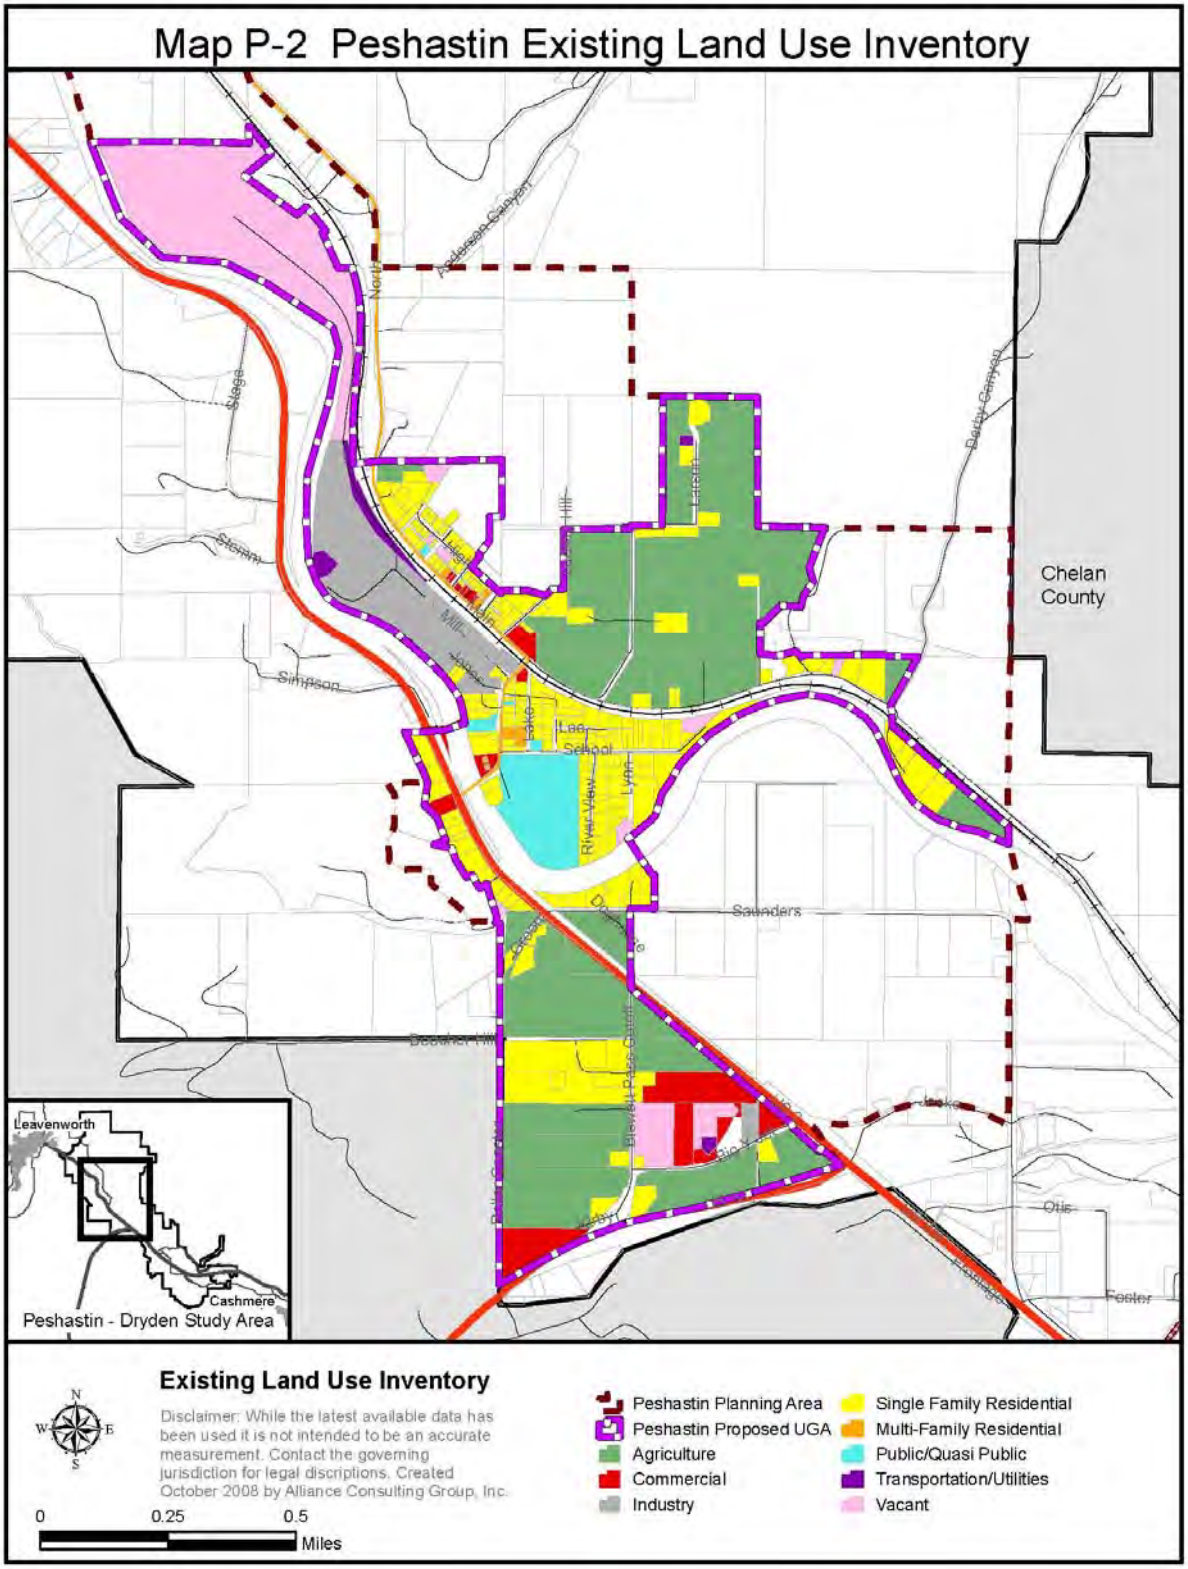
In addition to the Sub Area Plan, development regulations were prepared to adopt the vision expressed in the plan. The development regulations are contained in Chapter 11.22 Peshastin Urban Growth Area, of the Chelan County Code. The land use regulations provide standards for the way development occurs for the Peshastin community that are consistent with, and implement the Peshastin Urban Growth Area Comprehensive Plan. These regulations are specific to the UGA, and activities and uses not specifically covered in this chapter are still subject to all other applicable provisions of the Chelan County Code, including, but not limited to, regulations governing development, design, procedures, land divisions, critical areas, etc. Unique aspects have been included, such as provisions to reduce glare, indoor commercial and industrial activity within the I-C area, dimensional standards for "big box" commercial activity, and a residential component (mixed use) for the I-C, C-D, and C-H areas. In addition, the use matrix was developed to ensure that activities and operations reduce or remove incompatibility within districts. The dimensional standards reflect an urban aspect that maintains the intent of the UGA. These new regulations provide clear, refined and defined standards for development.

Policy #4 Policies For County Wide Transportation Facilities And Strategies.

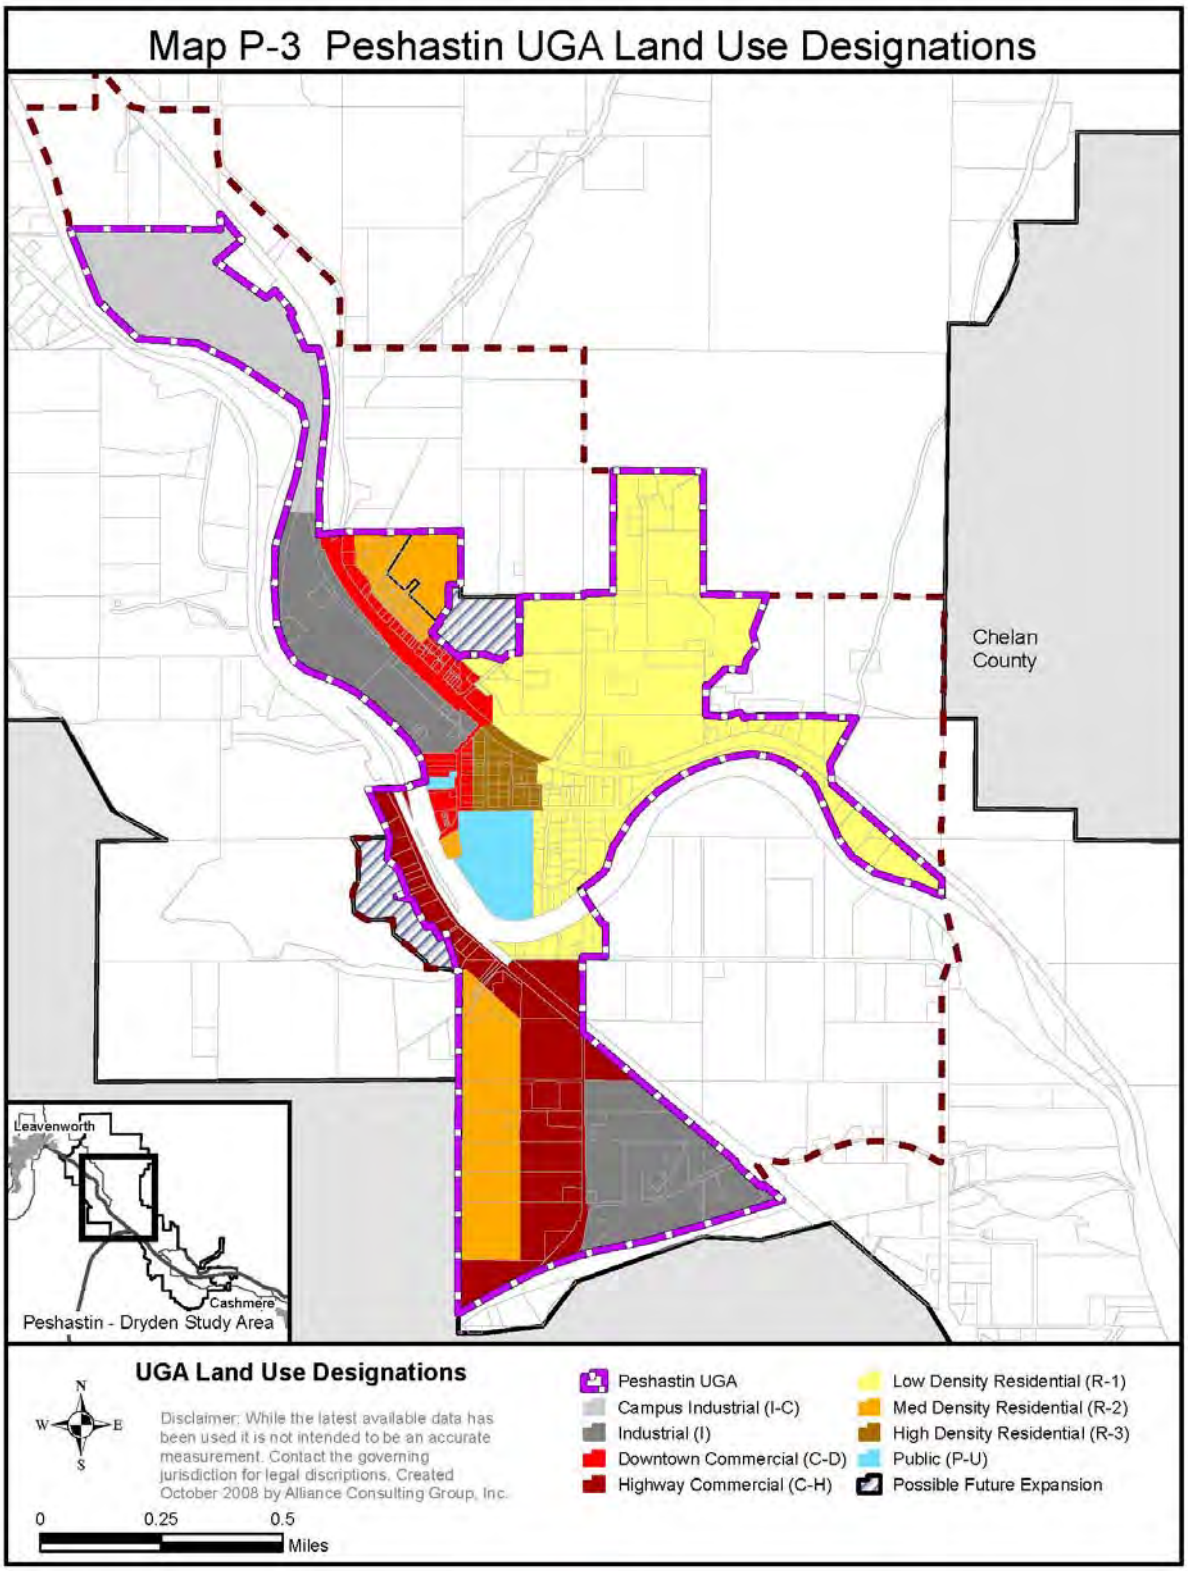
Chelan County is updating the Transportation Element of the Chelan County Comprehensive Plan, which was initially developed in 2000. First, transportation-related data will be collected from all of the cities and agencies in the county to establish comprehensive baseline information. Next, existing transportation policies will be revised to match current community values and land-use policies and to ensure compliance with all applicable regulations. Then, 20-year forecasts will be analyzed to identify aspects of the system that would benefit most from improvements. Next, potential project costs will be



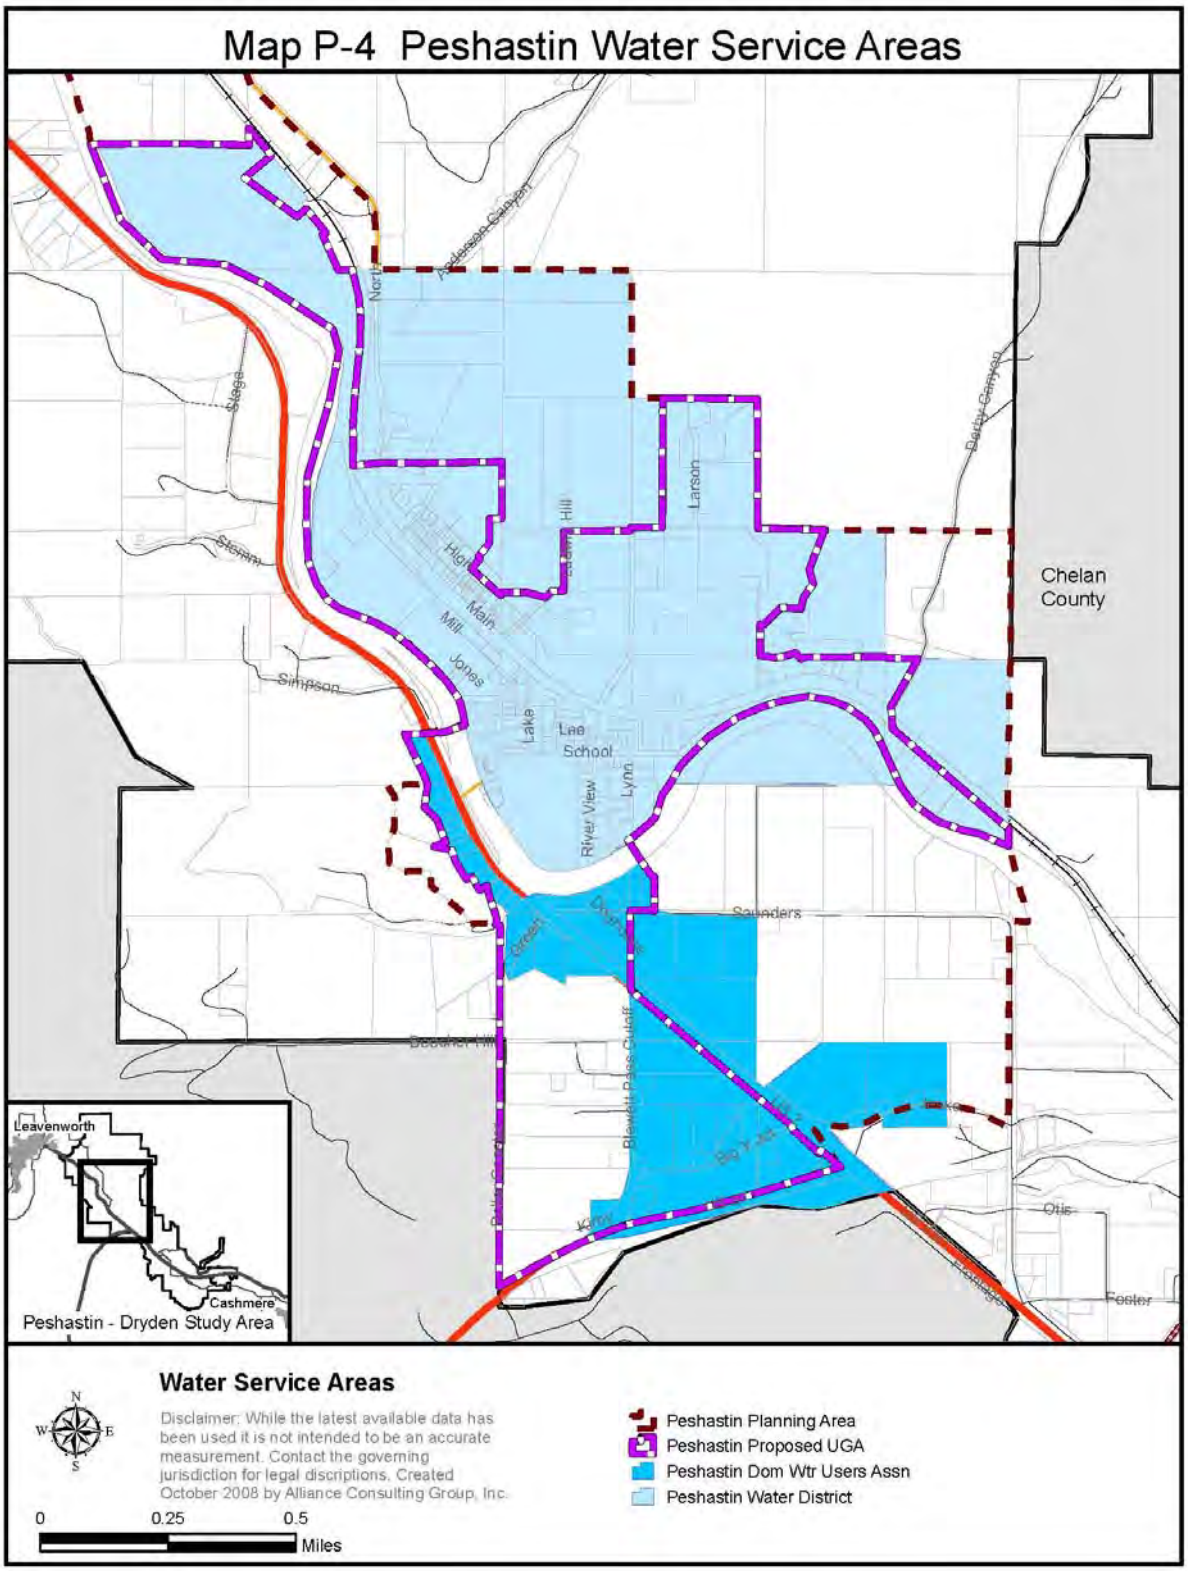
estimated and financial projections will be studied to determine when the highest priority projects should be built. Finally, the Transportation Element Update is scheduled to be adopted by the Chelan County Board of Commissioners in December 2008. The growing population and changing nature of the regional economy requires us to realign our transportation needs with current and projected land use patterns. The 20-year plan will identify needed improvements to the county's roadways, bridges, bike, pedestrian, aviation and rail facilities. As required by the Growth Management Act, a prioritized transportation project list, financing strategies and implementation measures will be included in the plan.



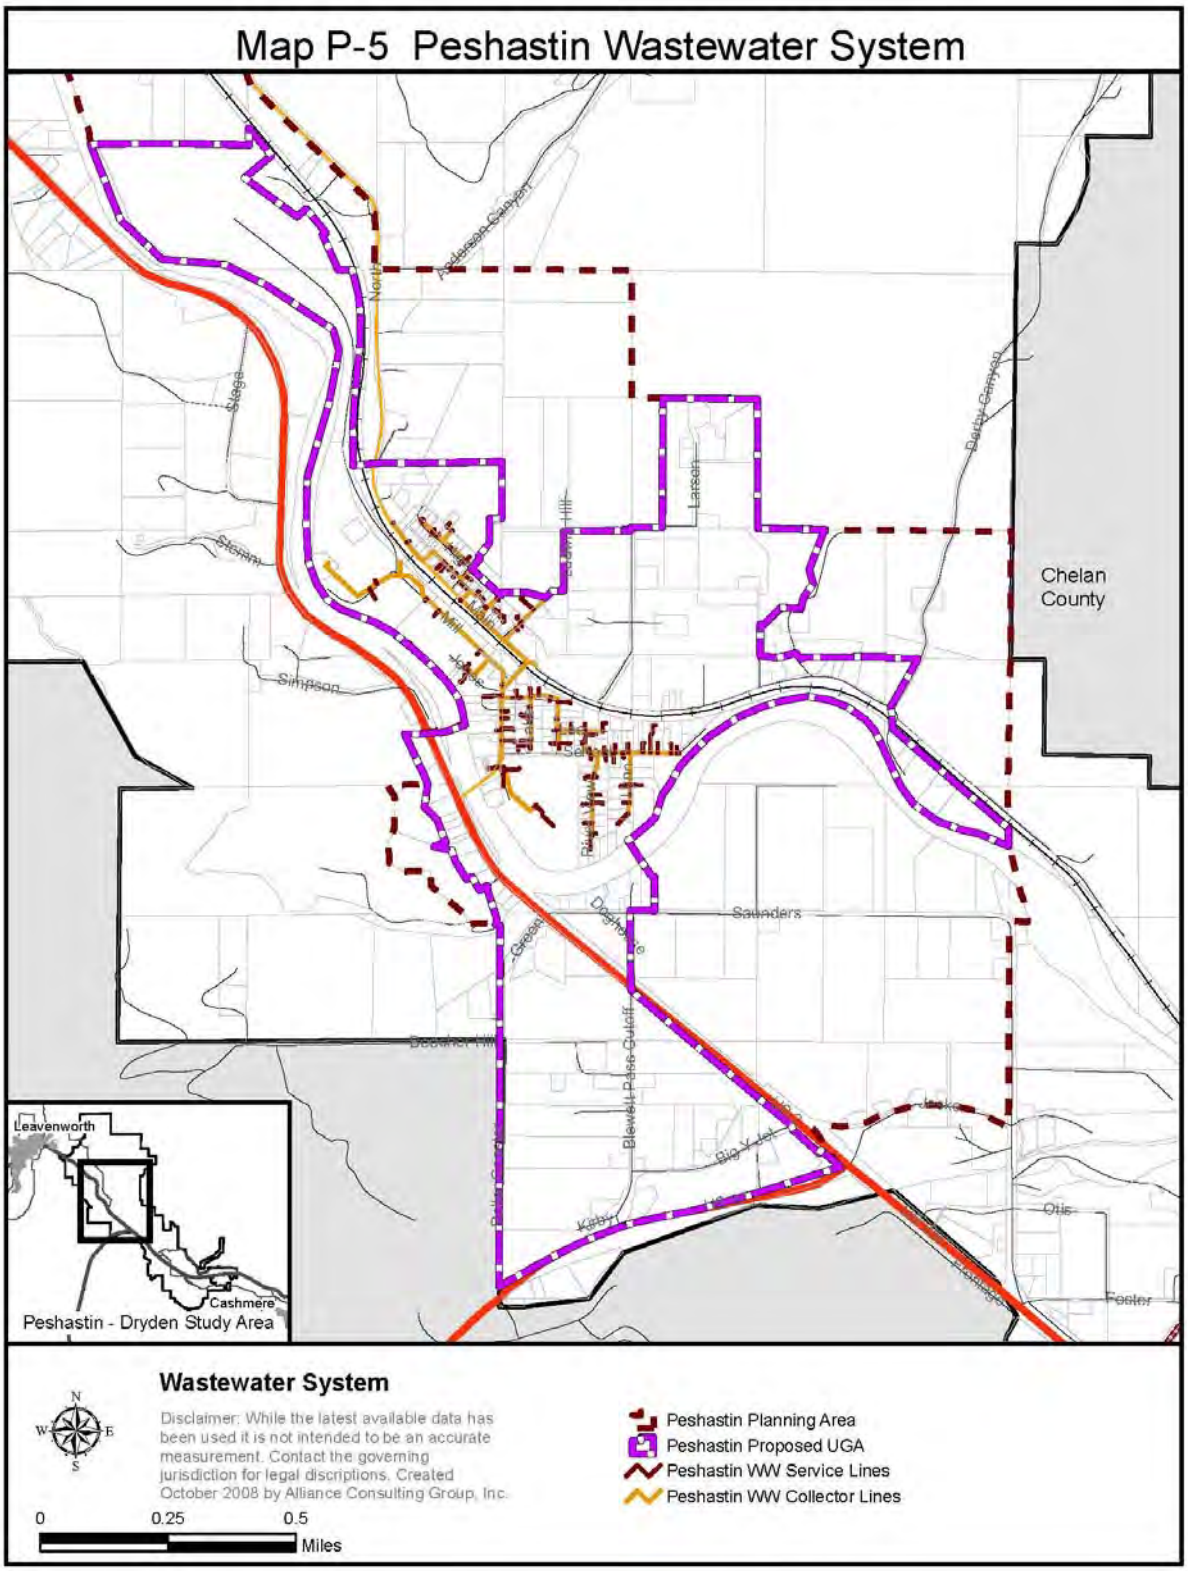
Policy #5 Policies Addressing The Need For Affordable Housing For All Economic Segments Of The Population And The Adoption Of Parameters For The Distribution Of Affordable Housing.



This Peshastin Comprehensive Plan includes a housing element which reflects the existing Goals and Policies of the Chelan County Comprehensive Plan while maintaining a uniquely Peshastin oriented perspective.



Policy #7 Policies For County Wide Economic Development And Employment.



This Peshastin Comprehensive Plan includes an economic development element which reflects the existing Goals and Policies of the Chelan County Comprehensive Plan while maintaining a uniquely Peshastin oriented perspective. In addition, attention has been given to the land use and development regulations that meet and are consistent with the Goals and Policies of both this and the Chelan County Plans.

Chapter 2: Land Use

Introduction

The Land Use Element of the Comprehensive Sub-area Plan is intended to promote orderly community growth by providing for planned land use areas which consider environmental, economic, and human factors. The Sub-Area Plan is designed to meet both present and future needs of the community and to serve as a guide to decision makers when presented with options for developing and redeveloping the Peshastin Urban Growth Area (UGA). This Element also helps retain the basic form and pattern of the community while creating opportunities for an orderly expansion. In general, the following Comprehensive Plan Land Use Designations Map shows the locations of the different land use categories, as well as the Urban Growth Boundary which defines the UGA.

Goals & Policies...

> **GOAL: Maintain and enhance the existing pattern of uses by further defining the uses and the pattern; and by providing incentives that encourage the refurbishing of existing structures and the in-filling of vacant properties to the appropriate uses, where feasible.**

POLICY: The following land use categories, and subsequent densities, are to be implemented through the zoning ordinance and other implementing regulations, as necessary:

> **Low Density Residential...**Is characterized by low-density residential uses, particularly single family homes and duplex units. Density is four units per acre.
>
> **Medium Density Residential...**Is characterized by medium density residential uses such as duplex and apartment units, as well as single family homes. Density is eight units per acre.
>
> **High Density Residential…**Is characterized by high density residential uses such as condominiums and apartment units, in addition to single family residences. Density is sixteen units per acre.
>
> **Downtown Commercial…**Is intended to allow for a variety of businesses, including retail, professional and community services, permitting above street-level residential development.
>
> **Highway Commercial...**Provides an area suitable for present and future retail commercial activities, including tourist commercial and multi-family residential.
>
> **General Industrial ...**Provides an area for existing and future industrial uses and activities to operate.
>
> **Campus Industrial...**Provides an area for existing and future industrial uses where activities, including outside storage can be fully enclosed. Residential uses are permitted provided the area of the building dedicated to residential use is limited to ten percent of gross floor area.

Residential…

The following goals, policies, and rationale provide direction for not only the development of implementing ordinances, but also during the review of specific projects. Their purpose is to help provide continuity between existing and potential residential uses. It is also their intent to equip the implementing ordinances with the needed background and authority to help maintain the quality of life within the sub-area.

> **GOAL: Maintain a sufficient number and variety of safe, aesthetically pleasing/attractive, housing units by encouraging new housing and enhancement and refurbishment of existing housing in a variety of neighborhoods that are served by adequate public facilities and utilities for people of all income levels.**

POLICY A: The community will continue their primary role in the conservation of housing by publicly investing in the infrastructure servicing the area, such as storm drainage, street paving, and recreation, and will provide zoning to prevent incompatible land uses and depreciation of property values.

> Rationale: Preservation of property values can be maintained by providing predictability in what is going to happen in the surrounding areas. Zoning is one tool to accomplish that end. The County in cooperation with the community has a program of improving infrastructure which should be continued within the available Capital Facilities Plan.

POLICY B: Ensure that urban development will not be permitted outside of UGA's except in master planned resorts or commercial development in planned/designated rural service centers.

> Rationale: Within UGA's there will be sufficient, urban-type services either already available, or at least planned for, which can handle urban densities. Similarly, master planned communities must demonstrate at the planning stages how these types of services will be provided to their "community", which in turn helps determine the density they will be allowed to incorporate into the development.

POLICY C: Prior to expansion of the UGA for residential purposes, redevelopment and in-fill will be encouraged within the Peshastin sub-area, where feasible.

> Rationale: Redevelopment and in-fill of areas with existing infrastructure helps to lower the cost of development and provide more efficient use of existing public utilities by reducing the cost of providing these services. In-fill also eliminates a significant number of vacant lots that contribute to fire hazards and accumulation of junk materials, which may be a detriment to surrounding property values.

POLICY D: Determine the density of development which is compatible with adjacent residential development.

> Rationale: Urban densities should be determined by services available, the road network, and adjacent land uses. Where a full range of urban utilities are available and adjacent land uses dictate a need for buffering. Adjacent to existing, well-established neighborhoods, lower densities should be reflected, such as four units per acre. Several different zoning classifications should be developed to allow for properly adjusted densities and mixed use development.

POLICY E: Maintain high standards for residential development, construction and maintenance. Develop standards that include a diverse choice of housing types, quantities and designs including those for senior citizens, physically challenged and low-income persons.

> Rationale: High standards for all development will help provide long-term stability to the community by ensuring the continuance of a durable housing stock. However, such standards are not meant to preclude the development of housing units to serve all income levels and special needs populations because of higher costs.

POLICY F: Encourage residential growth to occur in areas where public utilities exist or may be provided at reasonable costs.

> Rationale: Promoting developments in or close to areas with existing public utilities saves not only possible future public expenditures, but should lower the initial cost of development, thereby providing more reasonably priced housing.

POLICY G: Develop incentives that help encourage residential development to locate within the urban growth boundary, consistent with the comprehensive plans.

> Rationale: The Urban Growth Area (UGA) assists in delineating an orderly, efficient transition from rural to urban land uses. To capitalize on the public expenditures associated with the existing provision of services such as sewer, water, streets, etc. within UGA's, in-filling of these areas and ones adjacent to these services should occur first. The net result is prevention of urban sprawl and a decrease in public expenditures.

POLICY H: Protect residential districts from excessive noise, visual, air, water and light pollution generated by other land uses.

> Rationale: In order to ensure the quality environment for residences in the Peshastin area is preserved, provisions should be made to discourage incompatible land uses. The use of innovative techniques such as down-lighting and buffering for activities of a commercial or industrial nature, and/or other high intensity uses inside and adjacent to neighborhood areas, should help alleviate some possible conflicts.

POLICY I: Provide appropriate measures to regulate the keeping of livestock and animals other than domestic pets, including performance standards for maintenance of pastures, shelters, and feeding areas.

> Rationale: While domestic pets are generally not a problem within residential areas, other types of animals and livestock can be considered incompatible with residential uses and create conflicts. By considering the existing densities of residential areas and regulating the keeping and maintenance of these animals accordingly, most of the conflicts can be mitigated. Temporary animals and livestock for the purposes of 4-H projects should be allowed; however, if they become long-term they need to meet the necessary provisions of the district in which they are located.

POLICY J: Develop building height standards for all types of structures to be limited to what is appropriate in residential areas.

> Rationale: Many existing and future home/development sites have views of the surrounding area. While the Community may not be able to maintain totally unobstructed views, a consistent standard should be set in all zoning districts to preserve, to the extent possible the view amenity.

POLICY K: Provide innovative and flexible design for residential developments, especially for multi-family units, by establishing and encouraging planned developments.

Rationale: Planned developments can provide flexibility which allows the community to encourage the maximum use of new concepts in land development that might otherwise be inhibited by the strict application of the zoning ordinance. It can also encourage the enhancement of the natural characteristics of the land, help create permanent open space, and help utilize, more efficiently, the public facilities required of residential developments.

POLICY L: Allow primarily residential development within residential districts, with the exception of home occupations, subject to the appropriate hearing procedures.

Rationale: To preserve and enhance the quality of life in Peshastin, it is important to take all possible steps to avoid incompatible uses within residential districts. Prohibiting higher intensity uses, such as commercial or industrial ones, in established residential areas, could avoid numerous conflicts.

POLICY M: According to the density and intensity of residential uses in an area, provide appropriate types/levels of day care facilities.

Rationale: It is increasingly necessary for households to have two incomes in order to maintain their standard of living, thereby creating a need for adequate day care facilities. Because of the convenience to working families and depending on the density of an area, day care facilities are appropriate in residential areas and should be allowed accordingly.

POLICY N: The County in cooperation with the Community Council will develop regulations and procedures to require owners of vacant parcels and/or structures within all land use classifications to maintain said, parcels in a manner which does not promote or create fire hazards, and which does not detract from the quality of the neighborhood.

Rationale: Because of the arid climate, vacant lots that are overgrown with weeds and brush, and buildings that are left in a dangerous state of disrepair, cause a significant fire hazard and potentially dangerous accident situations, and may be a detriment to surrounding property values.

POLICY O: Establish criteria for housing and home sites that enhance the compatibility of standard residential developments.

Rationale: Criteria helps assure that uses and/or types of development which may have the potential to be inconsistent with residential neighborhoods are either precluded from a zoning district or are conducted in such a way as to be compatible. Construction and lot maintenance standards within the different zoning categories will reduce the chance of incompatible adjacent development or vacant lot neglect.

POLICY P: Review and alter land use regulations as necessary to ensure provisions are made for locating manufactured/mobile housing in appropriate locations, subject to special criteria, including state standards, designed to protect the integrity of established residential neighborhoods.

Rationale: Manufactured/mobile homes are sometimes seen as a detriment to residential neighborhoods. However, with special location and placement criteria provided to protect the integrity of these areas, these units can be compatible with residential development. It is also

important to ensure that mobile homes are of a quality that protects the health and safety of the residents utilizing this option and that promotes further the compatibility with conventional, stick-frame structures.

POLICY Q: Ensure manufactured/mobile home parks are provided urban governmental facilities and services, and are provided appropriate locations within urban growth areas.

Rationale: Manufactured/mobile home parks generally maintain densities that are more characteristic of urban areas than rural ones. Consequently, they need to be serviced by urban facilities and services which are to be provided only within UGAs.

Commercial…

The following goals, policies, and rationales create the ability to provide a quality environment for commercial development. They help define the scope of future development while still assuring compatibility with surrounding uses. By using the direction these goal and policy statements provide, the type of atmosphere the people of Peshastin desire for their downtown area will be maintained and enhanced.

GOAL: Provide and create opportunities for safe, aesthetically pleasing, and accessible commercial districts that allow diverse economic development and which contribute to a sound economic base for the community while maintaining a quality environment.

POLICY A: Promote the development of incentive programs that reward the continued use, maintenance, development, and revitalization of land and buildings within established commercial areas, consistent with the land use map.

Rationale: Existing commercial areas generally represent a substantial public and private investment in buildings and infrastructure. By maintaining and revitalizing the existing stock of land and buildings, the community can begin to in-fill the existing commercial areas with appropriate uses, thereby preserving that investment. This strategy also helps maintain the existing pattern of uses within the community, including residential districts.

POLICY B: Maintain existing commercial structures and zoning for commercial uses and protect them from conversion to other uses.

Rationale: In order to facilitate economic growth in the community, sufficient lands must be available for new businesses to come into the area. It is therefore important to have a clear representation of what lands are available, and some assurances that those areas will remain available in the future. Areas which are designated for commercial use should include criteria and regulations which discourage uses that could eventually conflict with commercial development.

POLICY C: Encourage the expansion of commercial districts/uses that occur adjacent to existing, similarly developed areas in conformance with the comprehensive plan when there is a demonstrated need for additional commercial land.

Rationale: This strategy will help maintain the existing commercial areas and promote the logical, orderly expansion of commercial uses adjacent to or near existing services, as the need arises.

Similarly, residential districts will be preserved as long as possible, without having to deal with piecemeal, premature commercial designations.

POLICY D: Encourage the development of commercial land in a manner which is complimentary and compatible with adjacent land uses and the surrounding environment.

Rationale: By making adjacent land uses complimentary and compatible, the continuation of commercial uses is insured, less resistance to additional growth will be expressed, and both land uses can co-exist without undue hardships to either.

POLICY E: Support commercial areas with adequate streets, parking, lighting, and utilities, including provision of pedestrian and non-motorized access to and within those areas, consistent with the Americans with Disabilities Act regulations.

Rationale: Commercial activities will generate greater traffic volumes, and will have greater service needs than a residential area. It is important to adequately provide for these needs in order to maintain the areas' viability and safety, and to prevent congestion and barriers to accessibility to the areas.

POLICY F: Develop adequate standards for off-street parking sensitive to the diverse needs of commercial uses.

Rationale: Inadequate parking areas can lead to congestion problems in both the street circulation system and the parking lots. Standards need to be developed that recognize the direct link between parking availability and efficient traffic circulation, and the diversity in parking needs for different types of commercial uses.

POLICY G: Recognize pedestrian needs in commercial areas by providing a more pleasant and comfortable environment through intense landscaping, buffering of vehicular traffic, and pedestrian amenities.

Rationale: To maximize the use of commercial areas, the atmosphere should be as inviting as possible for the consumer. Additionally, attractive, vibrant commercial areas will encourage additional merchants to locate close by, enhancing the commercial areas.

POLICY H: Encourage landscaping which provides unity to commercial developments and which screens or softens parking lots and unsightly areas, particularly in the transition areas between commercial and residential land uses.

Rationale: Landscaping helps provide continuity and definition to a commercial area, while also providing amenities to parking areas that break up the total paved look, cool them down, provide storm water retention areas, and make the area more inviting.

POLICY I: Ensure that on-site commercial preparation, i.e. road access, parking, surface drainage, utilities, water systems and sewer systems, be provided by private developers or appropriate public/private partnerships.

Rationale: By developing a piece of property for commercial use, the owner and/or operator of that business is directly benefited. There are also direct impacts to the existing infrastructure, such as the water, sewer and storm water drainage systems, already in place. It should therefore be the

developer's responsibility to contribute extensively to that development. Likewise, the community as a whole benefits from a quality commercial core, and should, through some means and in some instances, work with the developer to achieve the high level of development desired.

POLICY J: Ensure that commercial uses are not used in a manner which creates dangerous, injurious, noxious or similar conditions which would adversely affect the use or value of adjacent areas or properties. Ensure that commercial activities do not emit dangerous or objectionable noise, light, odors, radioactivity, vibrations or glare.

Rationale: Activities which may be commercial in nature but have the above characteristics would detract from the appeal of the commercial areas, and could be detrimental to the health and safety of the users and to the value of adjacent properties. Standards should be established, such as requiring downward directed lighting, buffers, appropriate scale and screening, in order to prevent objectionable activities from locating in the commercial areas of the community and which direct these uses to a more appropriate, less incompatible area.

POLICY K: According to the density and intensity of commercial uses, provide appropriate types/levels of day care facilities.

Rationale: It is increasingly necessary for households to have two incomes to maintain their standard of living, thereby creating a need for adequate day care facilities. Because of the convenience to employees and shoppers, day care facilities are appropriate in commercial areas and should be allowed according to the intensity of the commercial use.

POLICY L: Encourage future development to locate in clustered, attractive centers in designated commercial areas, as opposed to strip commercial development.

Rationale: Strip development can lead to increased public expenditures by inefficient and untimely expansion of services, or development in areas where services are not designed to meet commercial needs. It may also lead to a degradation of the existing core as new businesses continue to move further away. A central, compact commercial core provides greater pedestrian access, and helps maintain and support the existing downtown's viability and identity.

POLICY M: Encourage adequate circulation patterns in commercial areas and provide linkages to other land use activities where practical.

Rationale: To maximize the efficient utilization of commercial development by consumers, ease in moving from one place to another is essential. The circulation patterns for not only motorized traffic, but also for pedestrian and transit traffic must provide linkages between the two existing pockets of commercial uses, and within each area as well. This is particularly important in maintaining the viability of each existing area, until such time as they can be connected to become one.

POLICY N: Encourage new businesses that will, through excellence of design and the nature of the use, provide long term benefits to the people of Peshastin.

Rationale: The stability of a community can be directly tied to the vitality of its commercial areas. By encouraging an inviting, aesthetically pleasing commercial environment through design criteria, that stability is strengthened. The future of Peshastin and the quality of life its residents enjoy can be enhanced and expressed through a quality commercial district.

POLICY O: Promote the development of commercial activities oriented to the recreational and open space opportunities of the area.

> Rationale: The natural environment and associated recreation opportunities are valuable recreational resources for both tourists and the residents of Peshastin. The development of related commercial activities, such as restaurants, lodging facilities, and recreational services that capitalize on this resource, in appropriate areas, will expand the economic opportunities of the area.

POLICY P: Prohibit the further conversion of existing commercial structures into residential uses, and limit new residential development in the central business district to residences that are located on a second story, above the street-level commercial use.

POLICY Q: Promote the development of "Big Box Retail" in areas designated for commercial activities.

> Rationale: To maximize the efficient use of commercial development while maintaining the unique qualities of the community, the tourist industry and the natural environment.

Industrial…

New industrial development is necessary and desirable to help stabilize the local economy. However, there can be a number of negative impacts associated with various industrial uses. The following goals, policies, and rationales help to provide a framework for alleviating and internalizing some of these impacts with the subsequent goal being to create attractive centers for conducting industrial activities.

> **GOAL: Promote industrial development which contributes to the economic diversification, growth, and stability of the community without degrading its natural systems or residential living environment.**

POLICY A: Industries with undesirable environmental effects will be required to conform and comply with all applicable Federal, State and Local standards for water, air, noise, odor, light and visual pollution, and will not negatively impact compliance with the state waste discharge permit.

> Rationale: The quality of the environment is recognized as an important asset to any community. Standards have been established by Federal, State and Local agencies which protect not only the quality of the environment, but also the health and safety of the residents in an area. It is essential that these standards be adhered to, both in development and operation of any industrial uses.

POLICY B: Encourage industrial site planning that internalizes negative effects by incorporating greenbelt buffers/open space; landscaping; adequate utilities; noise, air, and water pollution control devices; and attractive fencing or similar measures.

> Rationale: Because they are an asset to the economic stability and development, industrial uses should be an integral part of the physical make up of the community. By mitigating any possible negative affects through quality landscaping and buffering techniques, industrial users can be made more compatible with adjacent uses.

POLICY C: Encourage new industry to be located in planned industrial parks which afford neighboring properties protection from noise, off-site light, vibration, drainage, dust, excessive traffic and view blockage.

Rationale: Clustering multiple industrial users in one area not only increases the efficient utilization of needed services, such as water and sewer systems and storm water drainage, it is easier and less costly to each user to provide the necessary buffers.

POLICY D: Encourage planned industrial parks to be located in areas adjacent to major street arterials, preferably on lands not suited for agricultural or residential uses.

Rationale: The materials needed for production, and the end product itself, must be transported to and from the industrial site to the consumer. This movement of goods generally takes numerous trips by large, tractor/trailer combination rigs that can be extremely detrimental to road conditions and traffic circulation. By locating the industrial parks adjacent to major arterials of sufficient design, not only is the transport of materials made more efficient for the industrial user, the longevity of the road is extended.

POLICY E: Identify lands best suited for industrial activity through the development and application of location and design criteria.

Rationale: Industrial development, and the subsequent economic benefits to the community, is contingent upon appropriate lands being designated for intensive activities such as manufacturing, warehousing, wholesaling and repair. Location and design criteria that consider the present uses of the land as well as those of the surrounding lands, the availability and adequacy of the transportation network and supporting utilities, physical constraints, ownership patterns, and community concerns will make the tough location decisions less difficult.

POLICY F: Encourage variety and innovative design in industrial site development, and promote an attractive, high quality environment for industrial activities through good landscaping, parking, and building designs, particularly where land uses of distinct character or intensity adjoin.

Rationale: With well-designed sites, encouraging new firms to locate in the area will be easier. The provisions for landscaping, parking, and innovation in building designs will help to decrease conflicts in land use and make industrial areas easier to locate.

POLICY G: Encourage, whenever possible, the extension of support facilities and services for industrial activity.

Rationale: It is generally necessary to have a full range of services and utilities available to encourage industrial development. Capital improvement programs for all purveyors should be reviewed jointly, assuring the timely and coordinated provision of these services.

POLICY H: According to the density and intensity of industrial uses in an area, provide appropriate types/levels of day care facilities.

Rationale: It is increasingly necessary for households to have two incomes in order to maintain their standard of living, thereby creating a need for adequate day care facilities. Because of the convenience to employees, day care facilities should be provided in industrial areas, but only with careful consideration to the health and safety of the children.

POLICY I: Encourage the continued development of light industries that are related to the agriculture or recreation/tourism industries

Rationale: The primary industries in and around the Peshastin area are agriculture and tourism related. Emphasis should be placed on maintaining and enhancing those industries to include processing, packing, storage, and shipment of agricultural commodities, and manufacturing of recreational equipment within the planned industrial areas.

POLICY J: Encourage clean industrial development which is compatible with the quality of life in Peshastin and with the natural environment (air, water, noise, & visual).

Rationale: Industrial development should be compatible with and not detract from the quality of life enjoyed by area residents. Development and operation of industrial uses should be sensitive to not only the physical environment of the community, but also to the expectations of the citizens.

POLICY K: Prohibit the development of 'Big Box Retail" in areas that are Industrial in nature, to ensure the proper use of designated Industrial Parks.

Rationale: It is necessary to ensure that Industrial development will happen in those areas identified as Industrial zones. This will maintain the compatibility of the areas Industrial needs, while keeping the in mind the protection of the environment and the well-being of the citizens.

Agriculture…

Agriculture and the associated support facilities are the primary economic base in the Peshastin area. It is important to maintain these existing uses by providing a cushion from situations that make agricultural activities difficult. Agriculture not only plays an important role in sustaining the economic viability of the Peshastin area, primarily as the area's major industry and employer, but it also affords a certain identity to the community. By retaining existing agricultural uses within the UGA the agriculturists are able to have some assurances that they will be able to continue operating without being subject to premature growth pressures until they decide to convert their property to a more urban type of use. The following goals, policies, and rationale provide a means of protection for farmers of existing agricultural parcels until such time as they decide to develop their property to a different use.

GOAL: Preserve and encourage existing and future agricultural land uses as viable and as a significant economic activity within the community.

POLICY A: Support land owners in developing land consistent with local land use policies.

Rationale: Within the UGA, when the owner of existing agricultural parcels decides to change the use of the property to a more urban land use, the community will support and encourage land owners to develop the land according to the designations of the comprehensive plan.

POLICY B: Support and encourage the maintenance of agricultural lands in open space designations; current use property tax classifications consistent with RCW Chapter 84.34 (Open Space), and/or other tax benefits that help retain the economic viability of farming practices.

Rationale: The open space and current use property tax program makes agriculture a more viable operation on lands that, because of their proximity to residential and/or recreational developments, might be assessed at a much higher rate than agricultural lands in the outer portions of the County. Owners of existing agricultural uses within and/or in close proximity to the UGB are encouraged to investigate the possibility of participation in this program.

POLICY C: Ensure that public service and facility expansions and non-agricultural development do not impair the viability of current agricultural activities within Peshastin and the immediate surrounding areas, until such time as it is apparent that more land base for urban uses is needed.

> Rationale: The availability of public services and facilities will promote the development of non-agricultural uses, which in turn raises the assessment of property taxes. Until the owner of existing agriculture lands wishes to convert to other types of development, development of appropriate utility expansions should be limited to residentially designated areas only, to help preserve the existing agricultural activities.

POLICY D: Encourage the control of noxious weeds and fruit pests in all affected areas.

> Rationale: Noxious weeds pose a threat not only to an agriculturalist's productivity, but if left unattended to grow and dry out on a vacant lot they can also create a dangerous fire hazard. Fruit trees left unattended provide breeding ground for pests. By requiring removal of fruit trees at time of subdivision, the orchard industry will be given an extra measure of protection from pests.

POLICY E: Adopt a "right-to-farm" attitude whereby the Peshastin Community recognizes that the lands and uses in existing agricultural areas enjoy historical or prescriptive rights to normal farm practices such as early and late hours of operation, noise, dust generation, crop dusting, odors, slow moving vehicles and livestock on rural roads. In the event of a conflict between these and residential uses, community support shall be in favor of the existing agricultural use.

> Rationale: A major deterrent to farming practices in areas near residential developments are the nuisance complaints from residents in the area who are unaccustomed to normal agricultural activities. By adopting a "right-to-farm" attitude, the Community will establish its support against complaints for normal agricultural activities taking place in existing agricultural areas.

POLICY F: Ensure that public actions are managed to minimize disruption of agricultural activity.

> Rationale: Disruption to agricultural practices can come from all facets of society, including the public sector. When reviewing public policy/practices in areas designated for agriculture, careful consideration should be given to the affect of that action on farming practices in the area.

POLICY G: Ensure that all development permits, including short and long subdivisions, issued for development activities on, or within 500 feet of a designated agricultural or forest resource areas contain notice, such as a note placed on the face of the plat and on the title report, stating that the property is in an area that may be subject to a variety of activities associated with best management of agricultural lands, such as spray drift, noise, odors, early and late hours of operation, etc.

Environment and Critical Areas Conservation…

The Peshastin Sub Area plan relies upon and adopts by reference the existing Chelan County Comprehensive plan and implementing regulations related to critical areas protections, as required by the Growth Management Act.

Chapter 3: Housing

Introduction

The appeal of a community can be attributed to many factors; however, the quality of its housing stock and residential neighborhoods is probably the best indicator of its viability in the long run. It is necessary therefore, to have an adequate stock of housing for all income types, while still recognizing the vitality and character of established residential neighborhoods. It is the intent of the community, through this comprehensive plan, to provide a range and alternative of housing types and affordable housing opportunities. The goals and policies contained in this section are designed to maintain the current quality of existing housing developments as well as assuring that any new development is compatible with the character of the Community of Peshastin.

Goals & Policies

GOAL: Encourage housing development for all income levels by defining the different types of housing and densities allowed, and by providing a balance of those types throughout the community.

POLICY A: Support and encourage the retention and rehabilitation of existing housing units, thereby more efficiently utilizing older housing stock.

Rationale: Maintaining and rehabilitating the older housing stock should help to preserve existing neighborhoods, as well as providing housing units at a cost somewhat less than that for new construction, in the moderate income range.

POLICY B: Promote the retro-fitting and weatherization of existing housing for improved energy efficiency by encouraging the continued use of existing programs and the development of new and innovative programs.

Rationale: It is important to recognize that energy efficient homes are essential, and that there is some responsibility on the part of the public sector, particularly with the Chelan County PUD, to continue the existing programs already available to homeowners, while also exploring the possibility of new ones.

POLICY C: Develop incentives that work to preserve and protect historic sites and buildings.

Rationale: The quality of life of the community is expressed and sustained in its history. By preserving and protecting historic sites and buildings, not only is this quality maintained, but the long-term viability of the community is enhanced.

POLICY D: Provide a diversification of housing types and densities that can satisfy various lifestyles and economic capabilities.

Rationale: All segments of a community's population must have adequate shelter, and by assuring that a diverse inventory of safe and sanitary housing types exist in the community, these segments can choose which one best suits their lifestyle and budget capabilities, without having to compromise their safety and that of their families.

POLICY E: Develop incentives that promote the construction of affordable housing to meet the needs of all segments of the population, particularly those in a moderate income range.

> Rationale: It is important to recognize that some segments of the community live on a low or fixed incomes whose needs should be met, as well as those in the moderate income range; but it is also important to provide incentives that make quality moderate and low income housing unit construction feasible and/or lucrative for the developer.

POLICY F: Recognize and accommodate special needs populations, such as those requiring group home and/or foster care facilities, nursing home care, congregate care, emergency shelter, or supervised environments within the development codes.

> Rationale: These populations are an increasing portion of each community's demographic "make-up". Their needs can be met within existing residential neighborhoods provided development criteria is established which protects adjacent properties' quality of life and associated values.

POLICY G: Provide for long-term residential foster care for youths and the elderly in all density designations.

> Rationale: Foster care that provides nurturing and sustenance to both youthful and elderly clients within a "family" setting is appropriate in all density designations and should be allowed, according to the intensity of use, within the different zoning classifications.

POLICY H: Recognize that manufactured homes are a viable housing option and the most accessible private market housing opportunity available to potential homeowners.

> Rationale: Manufactured homes will continue to be an affordable option for people wanting to purchase instead of rent their housing accommodations. Therefore, they will continue to be an important element of the community's development, and appropriate standards should be established to assure their compatibility with existing residential development.

Chapter 4: Utilities

Introduction

For the purposes of this Comprehensive Plan, utilities shall include power, phone, cable/television service and fiber optics. All of these are similar in that they are delivered on a parcel by parcel basis and generally entail the payment of a monthly bill to the service provider. They are generally provided by public and/or private entities other than the County or Peshastin Community. The intent of the following goals and policies is to provide direction to decision makers involved in the process of planning for and expanding these utilities. The general theme is to 1) encourage the provision of these services at levels appropriate to the intensity and density of development in an area; and 2) encourage coordinated planning efforts between the different agencies and purveyors to more efficiently provide these services. Maps of Utilities can be found in correlating plans and documents held by the service providers and the Department of Community Development at Chelan County.

Goals & Policies

> **GOAL: Ensure that development occur in conjunction with availability of utilities, including power, telephone, cable and/or television service, and fiber optics; and encourage incentives be developed to expedite the appropriate extension of said, utilities.**

POLICY A: Ensure that development takes into account the timely provision of adequate and efficient utility systems.

POLICY B: Provide utilities at levels of service appropriate to the specific area, thereby avoiding excess capacities which may encourage growth beyond the designated density in an area.

POLICY C: Encourage development of vacant properties adjacent to established utility systems, where feasible, according to the appropriate zoning classification and/or land use designation.

> Rationale: Within UGA's, all development should be provided with urban-type levels of utilities services. By encouraging new developments to locate adjacent to existing facilities, the costs incurred by the developer, property owner, and tax payer will be minimized. At the planning stages for new development, the availability of these utilities and the consistency of the development with the capital improvement plan, shall be a determining factor in approving that development.

POLICY D: Promote multi-jurisdictional cooperation between the County, the Peshastin Community and special service purveyors for utility planning and implementation.

POLICY E: Encourage the coordinated development, review, update and implementation of utility purveyors' capital facilities programs, consistent with the Community's comprehensive plan.

POLICY F: Promote the planned development and phasing of utility construction consistent with capital facilities programs.

POLICY G: Encourage utility planning activities include an on-going analysis of a system's overall physical condition.

Rationale: Coordinated utility planning opens lines of communication between individual purveyors and local governments which allows for concurrent scheduling for new facilities as well as maintenance of existing ones. This discourages repetitive construction delays and, more importantly, alleviates the instances of one purveyor damaging or destroying another purveyor's recent construction activities, thereby reducing costs. The availability of urban utility services, and the predictability associated with advance expansion planning, is directly related to the growth and development of the community.

POLICY H: Ensure that utility installations and system upgrades be done in a manner sensitive to the environment.

POLICY I: Ensure that the cost of on-site utility improvements or site preparation for developments be the responsibility of private enterprise whenever possible.

Rationale: As with all aspects of any kind of development, environmental concerns should be considered during the planning and implementation of construction activities. Because new development will be the only direct beneficiary of the new systems needed on-site, it should carry the cost of developing said services. However, a system should be established to allow cost recovery by a developer through transfer of connection fees and late-comer agreements. Upgrading system inadequacies that currently exist should not be a responsibility of new developments, unless it is the development that causes carrying capacities to be exceeded.

POLICY J: Ensure the adequate sizing of utility trunk lines and main lines, consistent with the utility plan recommendations.

POLICY K: Encourage that utilities be installed within or adjacent to existing utility or transportation corridors/easements whenever possible.

POLICY L: Promote continued use, maintenance, development, and revitalization of existing utilities whenever possible.

Rationale: The above policies work to promote cost effective system upgrades and maintenance in the logical progression laid out in the capital facilities plans of all agencies. Adequate maintenance and utilization of existing facilities, as well as appropriate sizing of new facilities, helps the community prepare for projected future needs. This advanced preparation should protect against sudden, costly system upgrades and expansions due to haphazard, unplanned growth.

POLICY M: Support State agencies with streamlining their requirements for provision of services by including flexible standards that are based on specific situations in specific areas, as opposed to strict application of state-wide standards.

POLICY N: The policies and regulations of the many different State agencies need to consider and reflect local issues and situations.

Rationale: Many times the strict adherence to state-wide requirements can discourage or even prohibit development that the community has encouraged after extensive study. By including some flexibility into state requirements, local issues and concerns can be more adequately addressed while still meeting the intent of the policy and/or regulation.

Chapter 5: Capital Facilities Element

Introduction

The Capital Facilities Element (CFE) of the comprehensive plan is required by Washington State's Growth Management Act (GMA). Capital facilities and services are those things necessary to maintain the livelihood of a community. These services are, in general, provided by local government agencies and are available to all citizens of the community. Capital facilities play a large role in determining what kind, where, when and how much development will occur. Maps showing the locations and types of capital facilities can be found in correlated plans and documents held at the County.

Within the Peshastin community there are a series of purveyors that provide capital facilities to residents. Other than local transportation facilities, Chelan County currently does not operate or finance the facilities and services identified in this plan. It is imperative that the County, in cooperation with the Peshastin community and the applicable utility and capital facility purveyors work together to identify, fund and implement needed infrastructure improvements to serve the area. The other purveyors are encouraged to utilize and capitalize on both the technical information and the vision of the community, as expressed in this comprehensive plan. The following goal and policy statements will provide the Peshastin Community a guideline for implementing their Capital Facilities Plan. These policies should be referenced to provide consistent and logical decisions during the twenty-year planning period.

Goals & Policies

> **GOAL: Ensure that adequate capital facilities and services are planned for, located, designed, and maintained to accommodate the changing needs of all residents within the Peshastin urban area.**

POLICY A: Promote multi-jurisdictional cooperation between the county and special service providers for public facility and services planning and development.

POLICY B: Develop a Capital Facilities Plan, based on existing and future growth and development, which will provide a guide for phased and orderly development of public services and facilities, including expansion and location, within the urban growth boundary.

POLICY C: Use the phasing schedule for public facilities and services defined in the Capital Facilities Plan as a basis for land use, development approval and annexation decisions.

> Rationale: A coordinated approach to capital facility planning among agencies and departments eliminates costly duplication of not only data collection and analysis, but also development and construction schedules. With a comprehensive capital facilities plan as a guide, local government decisions for extension of public facilities and services can be based on accurate, consistent information. This capital facilities plan can also aide developers by providing predictability in the anticipated location and timing of expansions, and what general contributions they may be asked to make when they develop in a specific area.

POLICY D: Provide needed public facilities in a manner which protects investments in and maximizes the use of existing facilities, and which promotes orderly compact urban growth.

POLICY E: Promote continued use, maintenance, development, and revitalization of existing public facilities and services whenever possible.

POLICY F: The timing of implementation actions under the comprehensive plans and elements shall be based in part on the available financial resources to provide the necessary public facilities.

POLICY G: Encourage compatible, multiple uses of public facilities such as schools and parks, thereby increasing their value and cost effectiveness.

> Rationale: As more responsibility for public facilities and services is handed down to local government, it has become increasingly necessary to find more efficient and cost effective ways for providing said services and facilities. By using and maintaining existing facilities, and by combining different uses into one facility, public expenditures are spent more competently.

POLICY H: Provide public facilities and services at levels of service appropriate to the specific area. Where it becomes apparent that probable funding for required capital facility projects falls short, the community should consider reassessing the land use element.

POLICY I: Ensure that the location and design of public facilities does not adversely impact the environment or surrounding land uses.

> Rationale: If services and facilities are provided with capacities in excess of what is necessary, development will usually grow to that capacity. It is important, therefore, to only plan for and provide the facilities and services at levels appropriate for the designated density in an area to avoid adverse impacts on the environment and to maintain compatibility among land uses.

POLICY J: Within the Urban Growth Area, ensure that all existing residences and developments be connected to public water and public sanitary sewer systems, as necessary. Ensure that all new construction that is within the sewer service area (as it exists and/or as it may be amended in the future), connect to the Peshastin sewer system. Additionally, ensure that any new multi family, commercial, industrial and/or new land division that creates any lot or lots that are one acre in size and smaller connect to the Peshastin sewer system.

Utilities and Capital Facilities & Services

The following table demonstrates the definition of which items are "utilities" and which are "capital facilities/services", according to the Community of Peshastin. To establish a Level of Service standard the following list shows which of these items the citizens of Peshastin feel should be concurrently provided for residential (R), commercial (C), and industrial (I) areas, within the urban growth area. If these things cannot be adequately provided for a specific development immediately, either by the proponent or by joint venture with the proponent and the Community, that development will not be allowed. However, it is possible to phase in development as these items become available, provided that all items are available within 6 years of construction commencing.

	UTILITY	PUBLIC FACILITY			
1. Public Sewer		X	R	C	I
2. Public Water		X	R	C	I
3. Power	X		R	C	I
4. Phone	X		R	C	I
5. Individual Garbage Disposal		X	R	C	I
6. Cable/Television Service	X		R		
7. Streets/Roads/Bridges/Airports		X	R	C	I
8. Curbs & Gutters		X	R	C	I
9. Sidewalks &/Or Pathways		X	R	C	I
10. Stormwater Drainage		X	R	C	I
11. Law Enforcement		X	R	C	I
12. Fire/EMT Protection		X	R	C	I
13. Government Services		X	R	C	I
14. Solid Waste Disposal		X	R	C	I
15. Animal Control		X	R	C	I
16. Schools (Primary & Secondary)		X	R	C	
17. Higher/Adult Education		X	R	C	I
18. Cemeteries		X	R	C	
19. Disaster Planning		X	R	C	I
20. Mental Health/Social Services		X	R	C	
21. Fiber Optics (when available)	X		R	C	I

Chapter 6: Transportation

Introduction

Transportation networks tie a community together as well as linking it to the outside world. Local streets and roadways should provide a safe, reliable access to work, schools, shopping and residences. Transportation networks to the outside area are important to the economic growth of the community in providing needed access for goods and services into and out of the area. For the purposes of this Comprehensive Plan, transportation encompasses several modes of travel, including air, motorized, transit and non-motorized. The intent of the transportation element is to be consistent with the land use element as well as continuing the idea of coordinated planning efforts between the different agencies responsible for providing the different modes of transportation, such as County-wide Planning Policies and the North Central Regional Transportation Planning Organization.

Chelan County is in the process of completing a Regional Transportation Plan and its Findings and Conclusions may be used at a later date to give more up to date information on the Level of Service and detailed information about the future transportation needs and compatibilities of the community.

Level of service (LOS)
The levels of service standards adopted in this plan will be maintained through upkeep of the existing circulation system, expansion of transportation services, and/or traffic demand management strategies. The community has adopted the Link (A-F) LOS standards for its roadways. These standards are regionally coordinated through the North Central Regional Transportation Planning Organization Certification process.

LOS standards provide measurable criteria to judge the adequacy of service. Future transit facilities should be linked to established LOS standards. Analysis of LOS was done subjectively rather then using the Volume/Capacity Ratios. As specified in the Growth Management Act new development will be prohibited unless transportation improvements or strategies to accommodate the impacts of development are made concurrent with the development.

> *LINK A- Primarily free-flow traffic operations at average travel speeds. Vehicles are completely unimpeded in their ability to maneuver within the traffic stream. Stopped delays at intersections are minimal. Volume/Capacity Ratio less than or equal to 0.60*
>
> *LINK B- Reasonably unimpeded traffic flow operations at average travel speeds. The ability to maneuver within the traffic stream is only slightly restricted and stopped delays are not bothersome. Drivers are not generally subjected to appreciable tensions. Volume/Capacity Ratio greater then 0.60 and less than or equal to 0.70*
>
> *LINK C- Stable traffic flow operations. However, ability to maneuver and change lanes may be more restricted than in LOS B, and longer queues and /or adverse signal coordination may contribute to lower average travel speeds. Motorists will experience appreciable tension wile driving. Volume/Capacity Ratio greater than 0.70 and less than or equal to 0.80*
>
> *LINK D- Small increases in traffic flow may cause substantial increases in approach delays and, hence, decreases in speed. This may be due to adverse signal progression, inappropriate signal timing, high volumes, or some combination of these factors.*
> *Volume/Capacity Ratio greater than 0.80 and less than or equal to 0.90*

LINK E- Significant delays in traffic flow operations and lower operating speeds. Conditions are caused by some combination or adverse progression, high signal density, extensive queuing at critical intersections, and inappropriate signal timing. Volume/Capacity Ratio greater than 0.90 and less than or equal to 1.00

LINK F- Traffic flow operations at extremely low speeds. Intersection congestion is likely at critical signalized locations, with high approach delays resulting. Adverse signal progression is frequently a contributor to this condition. Volume/Capacity Ratio greater than 1.00

Transportation Demand Management (TDM) Strategies
TDM strategies have are a proven way to reduce traffic congestion in communities of all sizes. Individuals within the community currently work together to help provide ride or car sharing as needed. Additional TDM's that may work in Peshastin include:

- *Public education and promotion*
- *Custom Transit Services*
- *Non-motorized Mode Support*
- *Park & Ride Lots*

Pedestrian & Bike (non-model transportation)
The benefits of walking and bicycling go beyond an individual's enjoyment and health benefits; having fewer vehicles on the road will result in less pollution and a healthier environment. There is also a positive economic impact seen in increased property values and marketability for property located near trails and open space (Economic Impacts of Protecting Rivers, Trails and Greenway Corridors). Beyond property values businesses located in pedestrian friendly downtowns or centers encourage visitors to stop and shop. Additionally, the community benefits from the lower cost and maintenance of bicycle and pedestrian facilities. Design standards for pedestrian and bicycles are available through the WSDOT.

Forecasting
Forecasting traffic patterns related to land use and population growth is an important tool to most communities. Peshastin recognizes the importance of informed and thoughtful development and its many impacts on transportation. Currently there is no data regarding road counts to base a forecasted travel model on. When funding is available the community will seek to expand the transportation plan to include: Travel demand analysis, land use impacts, traffic counts, and forecasting, when development or population increase warrant.

Goals & Policies

GOAL: Provide a multi-modal transportation network, including air traffic, which adequately links State, County and City systems in a safe, efficient and economical manner. Provide a year-round network for the transit of agricultural commodities, public transit, and movement of goods and services.

POLICY A: Encourage that State and County facilities, including roads and bridges, that help transport people and goods into the community be improved to adequately handle circulation, either through design, load capacities and weight limits, or through total re-alignment. Where re-alignment of roads is not feasible, more lanes of adequate length should be provided to accommodate the many different types of vehicles utilizing the system, thereby improving maneuverability and movement.

POLICY B: Public transit is needed to link all the developed cities, communities and unincorporated centers in the outlying areas of Chelan County. Encourage the active pursuit of public transit as a viable option for

providing mobility to the extensive population in need of transportation other than single occupancy vehicles.

> Rationale: Circulation patterns and transportation needs are not limited or affected by jurisdictional boundaries. The systems that move people and commodities into and out of an area have a significant impact on that area, particularly in smaller communities, where the trend to abandon rail lines has increased. It is essential to the viability of Peshastin that State and County agencies, as well as public transit, consider input from the citizens of Peshastin for all projects and services (or lack thereof) in the Chelan County Region.

POLICY C: Provide for an inter-modal transportation infrastructure that ensures adequate and safe access to property via a variety of travel modes; and adopt levels of service for said infrastructure that reflects the preference and needs of the community.

POLICY D: Encourage the development of a road classification system as a means of providing for the orderly and efficient flow of vehicular traffic, and as an aide in continuous evaluation and modification of the circulation systems in response to the current needs and desires of the public.

> Rationale: It is important to the vitality of a community to have a transportation infrastructure that at least addresses the minimum requirements of that community, including the provision of alternate modes of travel. A classification system helps in identifying existing and future travel needs within the area, while a level of service standard establishes the communities' wishes regarding the performance of that system. These two organizational tools aide in monitoring and measuring the circulation system, and provide a consistent data base from which decisions can be made regarding expansions, improvements, etc.

POLICY E: Ensure that economic and residential growth decisions be tied to the ability of the existing transportation system to accommodate the increased demand, or ensure that new transportation facilities be provided concurrently with the proposed development.

POLICY F: Ensure that during the review of land use proposals, provisions for adequate walkways and rights-of-way, as well as a full range of improvements to serve the area, be considered and appropriate installations made.

POLICY G: Encourage detailed planning and feasibility studies in the very near future to help identify future non-motorized trail corridors that provide linkages throughout the different areas of the community.

POLICY H: In order to maintain efficient transportation options, at a minimal cost to the Community, TDM strategies will be utilized as demand and opportunity warrant.

POLICY I: Design transportation facilities within the Urban Growth Area to minimize adverse environmental impacts resulting from both their construction and operation; and ensure that said facilities are compatible with and minimize potential conflicts between adjacent land uses.

POLICY J: Encourage that streets and roads be well-designed, and consider terrain as well as connections to existing street systems and/or adjacent sites.

POLICY K: Promote safety by encouraging street design that provides adequate sight distance, channelization, separation of vehicles and pedestrian/non-motorized traffic, and avoids difficult turning and merging patterns.

> Rationale: Careful consideration of environmental and natural factors, the existing system, and adequate safety features provides a comprehensive look at the impacts of needed transportation facilities. This all-encompassing review helps decision makers reach the most agreeable decision for all interested agencies and individuals regarding the location of these facilities.

POLICY L: Provide a safe, coordinated system of bikeways, walkways, and trails, including through-routes, to meet existing and anticipated needs for non-motorized traffic.

POLICY M: Encourage accommodations for transit, such as providing park-and-ride facilities, shelters, benches, and turnout lanes, particularly when high levels of rider-ship are evident.

POLICY N: Encourage the development of beautification programs along major and minor arterials, including city, county and state routes, to promote the quality of the area.

> Rationale: The above policies reflect the desire of the citizens of Peshastin to expand and enhance their existing circulation system. By making the existing facilities more aesthetically pleasing, and by providing multi-modal alternatives, the overall viability and appeal of the Peshastin area is supported and enhanced.

POLICY O: Provide maintenance activities related to traffic control devices.

POLICY P: Maintain needed traffic data such as traffic counts and accident data to support studies, planning and operational activities.

POLICY Q: Coordinate the community's planning efforts with on-going state-wide and regional transportation planning efforts by identifying these facilities and recognizing the established levels of service.

POLICY R: Highway 2 is recognized as a "State-owned Transportation Facility", as identified by the Washington State Department of Transportation.

POLICY S: The level of service standard for state–owned facilities is established by the North Central Regional Transportation Organization in the Regional Transportation Plan.

POLICY T: The level of service standard for community-owned arterials is LOS C.

POLICY U: Ensure that any transportation improvements or strategies required to mitigate impacts are constructed or financed concurrent with development.

POLICY Y: Ensure that the cost of on-site transportation improvements or site preparation for developments, such as road access and improvements, sidewalks, curbs and gutters, be the responsibility of private enterprise whenever possible.

POLICY W: Coordinate planning, expansion, location, construction, and operations of major utility and transportation corridors, as well as improvements to existing facilities, between all service purveyors.

POLICY X: Work with other area jurisdictions to plan and coordinate joint road projects, and to develop a funding base to support transportation projects of mutual benefit.

> Rationale: Coordination helps support and complements the transportation functions of the State, Counties, neighboring cities, LINK, and other entities responsible for transportation facilities and services. The increased communication that results from cooperative planning for new systems as well as improvements to existing ones promotes efficiency and decreases public expenditures. It also expands the funding base for mutual projects by combining the resources of the different agencies into one effort.

POLICY Y: The community will strive to develop a pavement preservation program to assist with the maintenance and upkeep of the community's existing roadways.

POLICY Z: Develop an incentive program to reward developments for significant contributions to maintaining the operation of the existing circulation system(s).

> Rationale: The orderly growth and expansion of a community depends on the logical, adequate provision of transportation corridors, at or prior to further development. To foster this development it is necessary to evaluate each development on a site specific basis, as well as on an area-wide basis, prior to granting approval of said, development. Because the primary beneficiary of the needed improvements is the development, it is appropriate that the development bear the cost of the improvements. However, to ensure that this cost doesn't prohibit new development, incentive programs should be developed that provide flexibility and bonuses to those projects that significantly improve the existing systems.

Chapter 7: Optional Elements

Recreation

The recreational opportunities in and around Peshastin are many and varied. These activities can be used to help expand the economic base of the community. Capitalizing on the available natural resources and beauty of the area will entice a certain amount of tourist/recreational activity. These goals and policies seek to provide a framework to guide the development of this industry in a manner that is sensitive not only to the resource that makes it appealing, but also to the people of the community and their quality of life.

> **GOAL: The many and varied existing resources available for recreational activities in and around Peshastin can be utilized and enhanced, but only within their capacities so as to prevent degradation of the resources and the quality of life already in place.**

POLICY A: Encourage development of natural, outdoor, informal types of recreation facilities, such as fishing, hunting, camping, biking, hiking, snowmobiling or cross-country skiing.

POLICY B: Provide tourist activities that are geared toward a balanced, year-round, continuous stream of activity, as opposed to an overload of activity during a brief period of time.

POLICY C: Ensure that the scale, type, and area of recreational development be well defined so as to maintain the carrying capacity of the resource, as well as being designed to not have any adverse effects on the environment in which it is located.

> Rationale: The lands surrounding the Peshastin urban area offer a beneficial, natural resource for recreational activities. Promoting their development as such will stabilize and support the Peshastin economic base as people come into the community to utilize the available activities. It is important, however, to manage the growth of these types of uses so as to not degrade the quality of the resource to the point of being undesirable.

POLICY D: Establish criteria for developing, siting and locating recreational vehicle parks and hook-ups.

POLICY E: Provide a wide range of passive and active park facilities and recreational programs responsive to the needs, interests and abilities of users of all ages and types.

POLICY F: Encourage that where appropriate, new residential and commercial development be encouraged to provide land for parks, trails, walkways, and open space in relation to the density of development and where consistent with adopted plans.

> Rationale: The provision of recreation facilities should address a variety of user interests and should accommodate changing needs. By designing a wide range of facilities, tourism would be promoted, which in turn enhances job opportunities and economic development. As residential and commercial developments begin to tax the capacity of existing facilities, some of the demand for new recreation areas should be supplied by these developments.

POLICY G: Encourage low maintenance designs for parks and recreational facilities.

POLICY H: Enhance recreational site access by linking parking areas, adjoining developments, transit systems and other recreation facilities with walkways and/or bikeways.

Rationale: Public expenditures and out-lays can be reduced by utilizing lower maintenance designs for parks. It is also possible to lower the cost of establishing new parks, or even eliminate the need for them, by utilizing facilities more efficiently through enhanced access and connections.

POLICY I: Encourage recreation planning that involves participation by all interested individuals, agencies, clubs and groups involved in providing, utilizing and benefiting from recreational activities.

POLICY J: Encourage citizen organizations, committees, and/or businesses to become actively involved in encouraging and promoting the recreational opportunities in the area.

Rationale: A major issue to contend with when discussing the provision of recreational facilities is the associated costs, which can be extensive. By ensuring that all interest groups and individuals are involved in the planning process, their interests and needs will more likely be adequately addressed. This will enhance their ownership and support for the facilities, thereby increasing their support for funding needs, either locally or at a federal or state level.

Economic Development

Economic Development entails actions by the community that will directly or indirectly result in the increase of trading activity within the community. Through good policy direction, a community can determine which economic activities will be pursued in order to stimulate steady, beneficial growth over the long run. The following goals and policies help define that direction by indicating where businesses and industries should be encouraged, how public investment in infrastructure can induce private investment, and what kind of new businesses and industries should be promoted and recruited.

GOAL: To establish a multi-use land development strategy to attract and support local economic growth while enhancing, maintaining, and protecting the integrity and tranquility of residential neighborhoods and the natural environment.

POLICY A: Recognize future potential for development of economic resources while still maintaining the viability of the existing resources.

POLICY B: Provide guidelines and a framework for development which recognizes that the quality of the environment makes an important contribution to economic value.

Rationale: By recognizing the potential for future economic development and providing a guide and framework within which development will be considered, the Community will be providing predictability to all types of industry considering Peshastin for a location.

POLICY C: Encourage the location of business and industry that provide jobs for local residents, including the youth.

POLICY D: Actively support efforts to promote trade and tourism by participating in regional economic development programs.

POLICY E: Promote the growth of tourism-related businesses and services, particularly for recreational-type uses that capitalize on the natural amenities of the area, while still recognizing the importance of diversification to the stability of the economy of the community.

> Rationale: The competition for new types of industry, as well as expansion of the agricultural industry, can be very intense. It is therefore very important to Peshastin to be involved in economic development at a regional level to stay current on who has expressed an interest in the region. Outside of the agricultural industry, tourism is the most likely area of economic development available to Peshastin. However, it should be recognized that the tourist industry can, at times, be unstable and unpredictable. Additionally, the overuse of an amenity can sometimes destroy the very qualities that make it a desirable thing. Given these factors, other types of industry should be actively pursued when the opportunity arises.

POLICY F: Develop and maintain an attractive and high quality environment for economic activities through good design, landscaping, and control of impacts which detract from the environment or which create hazards.

POLICY G: Establish standards for site planning and design that provide for efficient and safe function while contributing to an aesthetically pleasing development.

POLICY H: Develop a variety of buffering techniques, including landscaping, fencing, and berming, to be employed to protect the integrity of areas of less intensive land uses.

> Rationale: Industrial and commercial developments which are designed in aesthetically pleasing, high quality environments will have a tendency to attract further developments. By assuring this high quality through design standards, Peshastin will be creating an environment that will help it compete more aggressively with other communities that may be under consideration by a company for location. This quality design will also lessen any impacts that may be associated with existing, adjacent land uses.

POLICY I: Allocate land for commercial and industrial uses based on appropriate site characteristics, market demand, community need, adequacy of facilities and services, and proximity to housing, consistent with the Comprehensive Plan.

POLICY J: Create a special development permit review and approval for all commercial and industrial development to promote uniformity and consistency within the community, and to assure adequate infrastructure availability.

> Rationale: Prior to allocating land for commercial and industrial uses, extensive review and study takes place as to what makes an area appropriate for certain uses. By providing this initial research, and by developing a review process that reflects and considers all the important factors involved in the research, the potential development is provided some measure of predictability. If a developer knows what to expect as far as land and utility availability and permitting processes, Peshastin will be more appealing than a community without those things.

POLICY K: Ensure that commercial and industrial development be designed to enhance vehicular circulation and pedestrian safety to provide a quality living environment for the shopper and nearby residents.

POLICY L: Ensure that interior and exterior parking lots be landscaped to break up large expanses of paved areas, reduce thermal heating by shading pavement, and reduce negative visual impacts.

POLICY M: Orient buildings to encourage pedestrian circulation, enhance the appearance of buildings, and provide unified design elements to offset architectural styles.

POLICY N: Promote the development of a "Community Mall" that incorporates multiple commercial users into a single building or buildings consistently designed and developed in a coordinated manner.

POLICY O: Promote the development of a museum at the old bank building on Main Street to help promote tourism and economic development that capitalizes on the rich history of the Peshastin area.

Appendix A

Meeting notes from March 26, 2008 meeting with utility, capital facilities and service purveyors.

Wastewater –

- TMDL for Wenatchee River
  - Regulatory Strategy Group
    - Leavenworth, PUD, Cashmere, DOE, CCDNR
  - Regionalization Study to look at consolidated Wastewater
    - Alternatives
      - Individual Efforts
      - Regional Alternatives
    - December of 2008 – Target Completion
    - Will help each purveyor decide whether of not to go forward with individual plans or a regional plan/effort
    - Prepare general wastewater plan
  - 10 years to finish studies, complete construction
  - Have to balance providing sewer to only urban areas, but have to be economically feasible
    - Need to involve state, soon
    - Potential WAC limitations
  - Grant money from Ecology is good news – difficult to get that for planning projects
- What is Peshastin's System operating at?
  - Doing just right now, 60-65% capacity
  - Will have new permit re: phosphorous reduction within 10 years
- Lifespan of this system right now?
  - Eventually have to upgrade to meet projected need
- Timeframe? 10 years? Perhaps
  - Will expansion be limited by meeting phosphorous? Maybe optimistic they won't before the 10 year timeline is up
  - Capacity trigger is 85% - have to start panning for growth at that point
- Estimate of Capacity based on plan?
  - Would exceed that – Permit is 110,000 gallons, currently at 60,000 – 70,000 gallons with residential projected in plan to add an additional 30,000, so with the Commercial and Industrial growth we would most likely exceed our current permitted use of gallons
  - Bigger issue is phosphorous, not capacity
- Would Dryden connection impact?
  - Older system
  - If they were to be pumped, would add capacity so don't take Peshastin's capacity
- Current system doesn't address Phosphorous?
  - Slightly – biological plants take phosphorous out, so take approx. 10% off
- Other ways to solve it?
  - Pump it out
  - Treat it to irrigation standards
- Who contributes to phosphorous?
  - Point sources – WWTP, permitted by Ecology, so take it on through that
  - Non-point sources – no permit

Peshastin Water District

- Serves water on east side of the Sub-Area, consistent with sewer
- 250 units of residential currently served
- Can double that. So could serve it but may need more in the future
- Some water across the River to Timberline System
    - Wholesale water only
- Water rights policy in district? Have them all for domestic in this area
    - Peshastin Water Users Association
        - Has most of the other side of Highway (Big Y area)
        - Capacity? Not sure? May not be able to expand
    - May require those who join the district to bring their own water rights
    - May need additional water rights
        - Pumping/storage capacity for now, but have to upgrade
- Pressure zones serve it all?
    - Yes, on this side of the River – Mill site does need some work

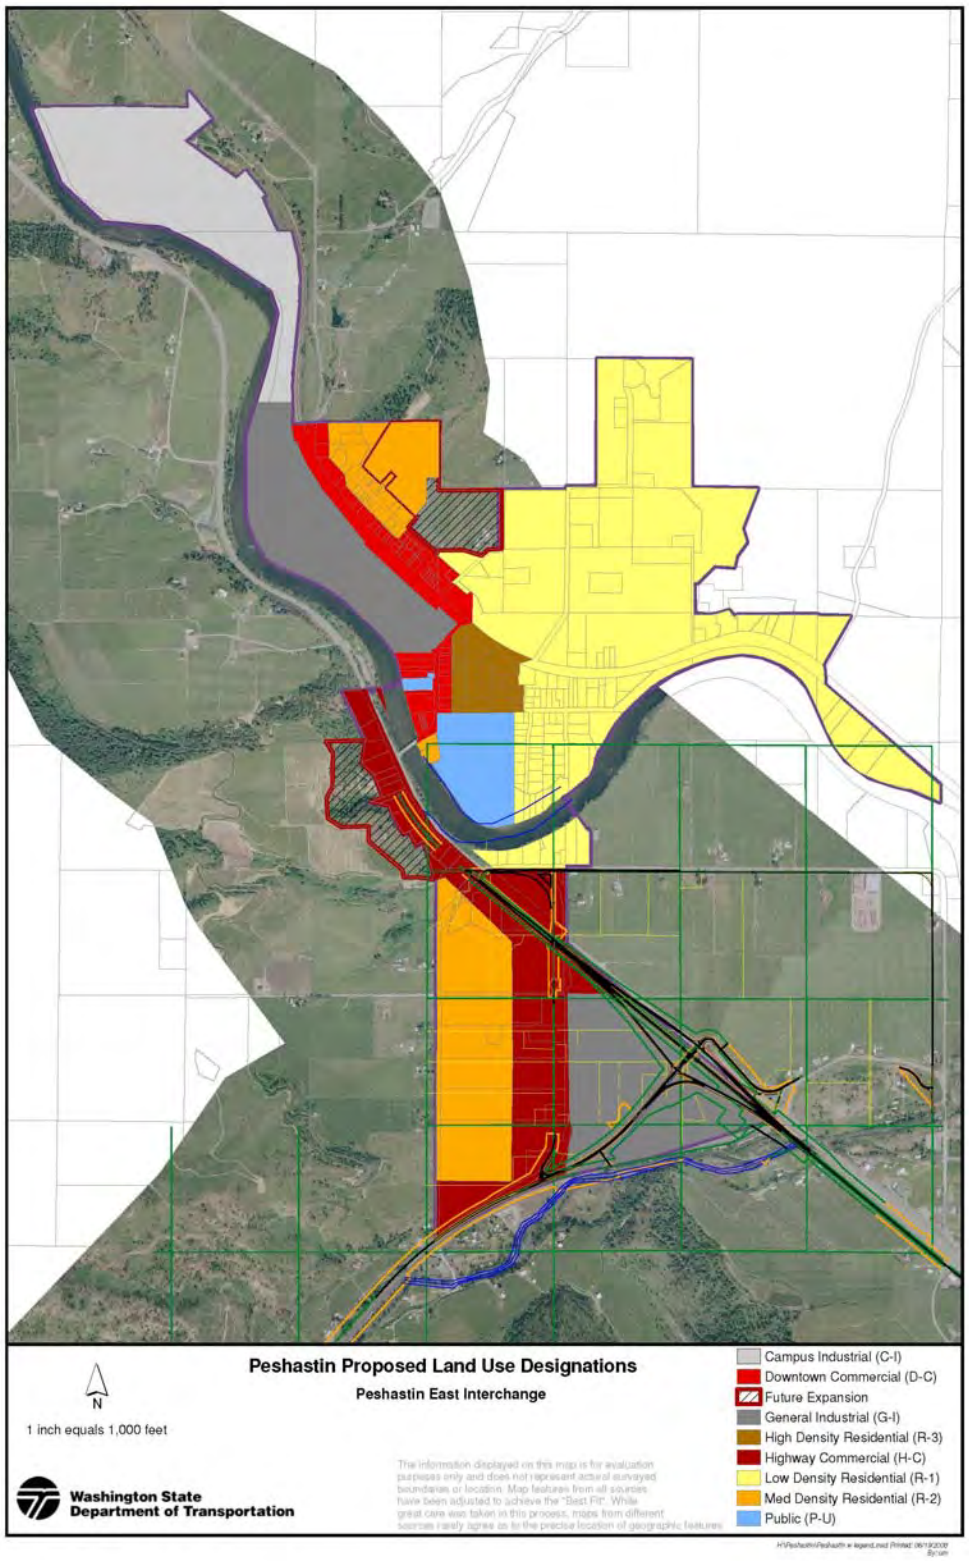
WSDOT

- Inclusive Plan
- Highway is paramount to maintain capacity
- New Interchange under construction
    - County will come to Community Council re: Transportation Element that is getting started
- Bridge – difficult for trucks to turn in – Any talks of expanding the Bridge?
    - Yes, there has been dialogue, but not sure the current state of plans
- Second Bridge has been discussed, including at the County's initial Transportation discussions
- Discussion of Big Y interchange and the draft plan's impact to it

Port

- Campus Industrial
    - Looks good
- Economic Development? Look at services/goods made here and go out to bring wealth back in
- Want to get Port and PUD involved in Economic Development
    - Focus groups developing in the next year
    - If have anything there, add it to the plan?
    - Spend time at sub-committee talking about economic development

Power/Fiber



- Existing Sub-Station at 85% capacity, so will need a new one
- Fiber is not here yet, starting on the other side of tracks and may be here within a year

Fire District #6 and Sheriff's Office

- Monitor/address needs, add people and facilities
- Make some adjustments
    - Weights and measure, hulk vehicles
    - Marine patrol
- Recent turnover because of retirement
    - Sit okay for numbers countywide
- Growth changes everything
    - Bad guy targets
    - Traffic, Etc.

- Doesn't change services responsible for, just have to figure out how to provide it
- No direct effect services?
    - No, just have to plan for staffing and capital – County-wide
- 65 commissioned, 4 squads of 40
- Response time is usually 1st impact – Staffing levels
    - Have to prioritize services

Map P-7: "Big Y Interchange", March 2008 draft land use designations – WSDOT

Re: Malaga Urban Growth Area (UGA) Plan

October 2026 Update: As demonstrated in the Land Capacity Analysis completed for Malaga (Appendix C), Malaga is already experiencing growth and infrastructure demands that are difficult to manage through its existing rural framework. UGA designation would establish a coordinated planning framework for accommodating that growth, protecting groundwater, and maintaining the surrounding rural landscape. The Chelan County Board of County Commissioners allocated $100,000 through its 2026 budget and has proposed an additional $100,000 in its 2027 budget to initiate a sewer planning study.

The Malaga community, located in unincorporated Chelan County along the Columbia River, is experiencing development patterns and growth pressures that are no longer consistent with its designation as a Limited Area of More Intensive Rural Development (LAMIRD). For the purposes of this memorandum, "Malaga" refers to that LAMIRD and not the broader Malaga-Colockum area, which is planned to remain rural with a focus on agriculture and with more limitations on residential development. The broader community identifies its greatest asset as the rural character of the community with mixtures of open space, housing, agricultural land, and small-town services, with limited commercial/industrial intrusions to the central core of the community, providing the following stated vision:

> The citizens of the Malaga-Colockum area envision future development that will complement and enhance, not unreasonably impact our rural character, our agricultural economy, and natural resource-based industries. We foresee maintaining the area's high quality of life while sustaining growth of both housing developments, downtown businesses, and expanded infrastructure services within the community, with the large commercial and industrial businesses set away from residential areas. The community will be served with the necessary public services, infrastructure, and businesses, such as a grocery store with fresh fruits and vegetables, small locally owned restaurants, salons, specialty stores, and churches to accommodate our growth. However,

> preservation of open spaces, wildlife conservation, resource lands and recreation opportunities surrounding our community will serve as a priority.

Over the past several decades, the area has experienced substantial increases in population, housing density, and limited employment activity, supported in part by the LAMIRD designation (over the last 20 years) and associated denser residential zoning.

Currently, the corresponding urban infrastructure for planned industrial, commercial, and housing developments within the LAMIRD is not available. Under the Washington Growth Management Act (GMA), this level of growth should occur within Urban Growth Areas (UGAs), where jurisdictions can plan land capacity, infrastructure, and public services to accommodate 20-year population and employment forecasts. Malaga's existing conditions, including continued residential expansion and emerging economic activity tied to regional industry, indicates that it must function as an urban area to warrant planning consistent with that role.

At the same time, the absence of urban infrastructure, particularly sewer service, has created increasing environmental and public health concerns. All development in Malaga relies on on-site septic systems (OSS), and recent data appear to show that the cumulative effect of these systems at current densities contributes to rising nitrate concentrations in the underlying aquifer, which serves as the community's primary drinking water source. An increase in nitrates conflicts with state groundwater protection requirements and creates the potential for significant long-term treatment costs if regulatory thresholds are exceeded. Soil and site constraints further limit the feasibility of septic-based development at higher densities. Conversion to a UGA would enable coordinated infrastructure planning, including provision of sewer service, allowing Chelan County to accommodate growth while protecting groundwater quality, supporting economic development, and ensuring compliance with state planning and environmental requirements.

The proposed UGA boundary includes areas currently zoned Rural Village, Rural Residential Recreational, and Rural Industrial. The boundary excludes agricultural and resource lands and includes land along the Columbia River from approximately Stemilt Creek Road to an area encompassing the former Alcoa site, while excluding agricultural and resource lands within the Malaga Vision Plan planning area. Proposed zoning within the UGA would largely align with zoning currently applied in Peshastin, subject to community input. See Attachment A for a map of the proposed UGA. The "Malaga UGA Zoning" section below also includes more detail.

Purpose of the Malaga UGA Plan

This Malaga UGA Plan provides the basis for evaluating and justifying conversion of Malaga from a LAMIRD to a UGA as part of the 2026 to 2046 Comprehensive Plan update process. The information and analysis presented herein are consistent with the requirements and standards of Chelan County Code Title 10 and the GMA.

This plan summarizes the basis for conversion, including background information on applicable GMA requirements and Chelan County procedures for UGA designation, followed by an evaluation of Malaga's existing conditions and future role. The analysis demonstrates that Malaga exhibits urban levels of development, is expected to accommodate future population and employment growth, and is currently underserved by rural infrastructure. The memorandum also evaluates the feasibility of providing urban services to the area and concludes with a proposed UGA boundary and supporting rationale. The following attachments are included to support this plan:

- **Attachment A:** Proposed UGA Map and Proposed Zoning (updated following community input)
- **Attachment B:** Malaga Vision Plan (2017)
- **Attachment C:** Malaga Land Capacity Analysis (LCA)
- **Attachment D:** Wellhead Protection from Nitrate Contamination Memorandum (2026)
- **Attachment E:** Soil Mapping and Employment Forecasting Findings (2026)
- **Attachment F:** Revised Code of Washington and Washington Administrative Code UGA criteria compliance
- **Attachment G:** Case Law memorandum (2025)
- **Attachment H:** Chelan Douglas Regional Port Authority TIF Study and Project List
- **Attachment I:** Comments on Draft (June 2026) Malaga Plan

Background

Chelan County is undertaking the Comprehensive Plan periodic review process, which is supported by a Periodic Update Grant by the Washington State Department of Commerce (Commerce). The Malaga area has been the subject of multiple planning and community efforts since the adoption of Chelan County's first GMA Comprehensive Plan in the 1990s. The area was officially designated as a LAMIRD in the 2006–2007 planning period. The 2017–2037 Comprehensive Plan included a thorough review of the area that was summarized in a 2017 Malaga Vision Plan, which is included as Attachment B. Large portions of the area were upzoned to "Rural Village" following the Comprehensive Plan update.

Since 2017, multiple residential subdivisions have been proposed or fully built out to current development standards, including public water services and full street sections. Sewer services are provided with community or individual OSS. That period of continued growth has also seen the closure of the Alcoa plant and the construction of a Microsoft data center, as well as proposals for additional residential and industrial development (e.g., the Helion fusion power plant).

A LCA was prepared for the 2026–2046 Comprehensive Plan to ensure that sufficient land is available to meet future housing needs, based on projected population growth and the corresponding housing demand for the range of income segments within the county (Points 2025). A separate LCA was prepared for the Malaga LAMIRD and included as Appendix C of the countywide LCA. An

inventory of land within the proposed UGA is included in the Malaga LCA and included with this memorandum as Attachment C. Maps prepared showing re-developable, vacant, and underutilized residential parcels in and around the Malaga LAMIRD are also included in Attachment C.

The significant growth in Malaga has also been monitored by Malaga Water District (MWD), the entity that manages municipal groundwater supply for ongoing and proposed residential development using individual OSS within the District's Wellhead Protection Areas (WHPAs). MWD has monitored and documented increased nitrate loading to the Malaga aquifer over time and correlates it with increased development in the area (see Attachment D). This issue is described further in the following sections to support the need for urban services in Malaga.

The area has been reviewed with the current periodic update of the Comprehensive Plan; employment and population estimates have been updated and additional studies regarding water quality and septic carrying capacity have been completed. The compiled materials clarify that urban services are required in Malaga and that they can be provided.

Designation of UGA

GMA Requirements

The Revised Code of Washington (RCW) Chapter 36.70A.110 outlines the requirements for designation of UGAs. The statute describes the planning, procedures and criteria required for initial adoption of UGA boundaries. Per the RCW,

> "Urban growth" refers to growth that makes intensive use of land for the location of buildings, structures, and impermeable surfaces to such a degree as to be incompatible with the primary use of land for the production of food, other agricultural products, or fiber, or the extraction of mineral resources, rural uses, rural development, and natural resource lands designated pursuant to RCW 36.70A.170. A pattern of more intensive rural development, as provided in RCW 36.70A.070(5)(d), is not urban growth. When allowed to spread over wide areas, urban growth typically requires urban governmental services. "Characterized by urban growth" refers to land having urban growth located on it, or to land located in relationship to an area with urban growth on it as to be appropriate for urban growth.

The statute directs the county to designate UGAs in consultation with local jurisdictions, including federally recognized tribes, though it does not define a limit on what level of density is “urban.” An analysis of the RCW and WAC related to UGAs is included in Attachment E.

Chelan County UGA Procedures

In Chelan County, proposals to designate UGAs must comply with procedural and substantive requirements under the GMA, as outlined in RCW 36.70A, and shaped by WAC rules, case law, and the Comprehensive Plan and development regulations (Attachment E). The County's consultant team conducted a case law review and has prepared this plan consistent with previous cases involving UGA creation or conversion (Attachment F).

Countywide planning policies and the Land Use Element of the Comprehensive Plan include criteria for UGA designations. The Comprehensive Plan notes that "Urban growth areas are to be located first in areas already characterized by urban development where existing public facility and service capacity is available and second, in areas where public or private facilities or services are planned or could be provided in an efficient manner" (Chelan County [forthcoming]). Malaga's level of development places it between the first and second tiers for urban growth.

The most directly related policies are as follows (emphasis added):

- Policy LU 5.1: Designated urban growth areas should include those areas **already characterized by urban growth** as well as those areas projected to accommodate future growth.
- Policy LU 5.2: Designate and size urban growth areas in accordance with the Growth Management Act (RCW 36.70A.110) based on population growth; **existing land use and transportation systems; capacity of public facilities and services; capacity to fund the necessary infrastructure and capital facilities**. Consideration should also be given to addressing grossly irregular corporate boundaries during the process of designating urban growth boundaries.

Malaga As a UGA

The Malaga LAMIRD Is Characterized by Urban Levels of Development

Malaga is the center of a growing community along the Columbia River. The Malaga LAMIRD has always been characterized by its rural surroundings and focus on agriculture, with local businesses and a history of manufacturing. The area has potential for an increase in commercial and retail businesses resulting from economic and population growth in the region (see Attachment G). This population growth has occurred as planning and zoning for Malaga has evolved from a vision to the current LAMIRD, allowing for denser housing and more affordable housing types (e.g., duplexes). Since 2017, the Malaga LAMIRD has added 149 new single-family residences and 11 new duplexes (as of January 2026). The potential for new employment and new housing can support a balanced community in an area that can be served efficiently.

Even though recently developed lots are large enough to meet minimum sizes for septic (12,000 square feet), they are served with other typical urban services. The lots have full road sections, including sidewalks, and are laid out in a neighborhood street grid. The lots are served by MWD, which draws from a municipal groundwater supply. The community is also home to a fire station, there are public parks, and the limited commercial area is served by transit.

It should also be noted that the area within the proposed UGA boundary has seen declines in agricultural uses as orchards are converted to residential or other uses within the LAMIRD. This distinguishes Malaga from its rural surroundings and other rural areas of the county. While agriculture uses can continue or be re-established in the community, the trends have been toward conversion of agricultural land to other uses throughout the County. The majority of Malaga within the UGA boundary is zoned Rural Village, which is not a resource or agricultural land use designation. By increasing density in these areas through UGA zoning, there is less pressure to develop outside of these areas and convert more agricultural resource lands into residential or other zoning types.

Malaga Is Projected to Accommodate Future Growth

The LCA for the 2026–2046 Comprehensive Plan update contains a detailed analysis of the growth expected in Chelan County, including Malaga. In Malaga, the LCA shows approximately 10 percent population growth over the 20-year planning period and demand for an additional 100 housing units, or about 15 percent housing growth. Malaga has the zoning capacity in vacant and underutilized land to accommodate approximately 549 additional housing units. Growth targets are based on population allocations made at the county level based on estimates provided by the State Office of Financial Management. Chelan allocates population to UGAs and then to the rural county areas.

For housing in the county (outside the UGAs), including in Malaga, the County is planning for housing that is affordable to all income levels. Malaga property prices are slightly lower than the surrounding area, and the ability for the community to accommodate additional housing units at higher densities can benefit housing provision for the county. To support the Comprehensive Plan periodic update, a Housing for All Planning Tool analysis was completed, which includes countywide housing need projections. Through this analysis, the County apportioned a percentage of the low-income housing allocation for the Malaga UGA in response to the continued population growth and employment opportunities in the area.

Industrial property, which comprises about 68 percent of the proposed UGA's area, continues to develop and redevelop, with demand for utilities and employees. This includes the Helion power station, which is under construction, as well as the Microsoft data centers that have been built in the area. Approximately 90 jobs are expected to be created within 5 years, with continued growth over the planning period. See Attachment G for a detailed jobs analysis.

Malaga Is Currently Underserved by Rural Services

Residential development in Malaga is currently served by individual or community septic systems, with new lots that are sized to accommodate individual septic. In 2024, two new subdivisions were reviewed by MWD for confirmation that the MWD could serve the new residences (44 lots total). These new subdivisions have been delayed due to environmental concerns related to groundwater contamination. This included an independent review of the proposals' wellhead protection studies, which showed that there is a correlation between on-site septic and increased nitrate concentrations in MWD wells. Therefore, while there is water available to serve development, continued reliance on septic systems endangers water quality to the detriment of human health. MWD informed the County that, even with enhanced septic systems, development at the current densities is not allowable. Further, providing nitrate treatment for the water system is not tenable for a small system and would be counter to affordability in the community. Either lots must be much larger (2.5 acres) or sewer must be provided. See Attachment D for documentation of MWD's water quality concerns.

Further studies have shown that many soils in the area are not conducive to supporting septic, due to soil type and groundwater travel toward MWD's wellheads. Given that much of the land area in the proposed Malaga UGA is a "Type 4" soil, the minimum lot size for septic should be approximately 19,000 square feet—larger than the infill densities that the County has desired for Malaga. See Attachment G for soils information.

Given existing development patterns in Malaga and the County's stated interest in infill of the area at something denser than 2.5-acre lots, policies should support sewer provision as an urban service within a UGA. This would allow development at a range of densities consistent with recent and historic development patterns in the area and aligned with other UGA zoning in the county (the County has proposed adapting Peshastin UGA zoning for Malaga).

Urban Services Can Be Provided to Malaga

Currently, the MWD serves approximately 660 customers via municipal groundwater supplies and can serve up to twice as many under current health department regulations and water rights. The MWD has committed to planning appropriately to finance water improvements and maintenance projects into the future, including developing a sewer plan (RH2 Engineering 2018).

Existing zoning in the proposed UGA has the capacity for approximately 549 additional residential units and demand could be met by the current water system. However, those units would need to be served by off-site sewer in order to protect the community's drinking water from increased nitrate contamination.

Capital improvements like a sewer treatment plant can be funded in many ways, including developer fees, water quality grants and loans, or tools such as tax increment financing via the Chelan Douglas Regional Port Authority (Port). The Port, Chelan County, and MWD have all committed funds to

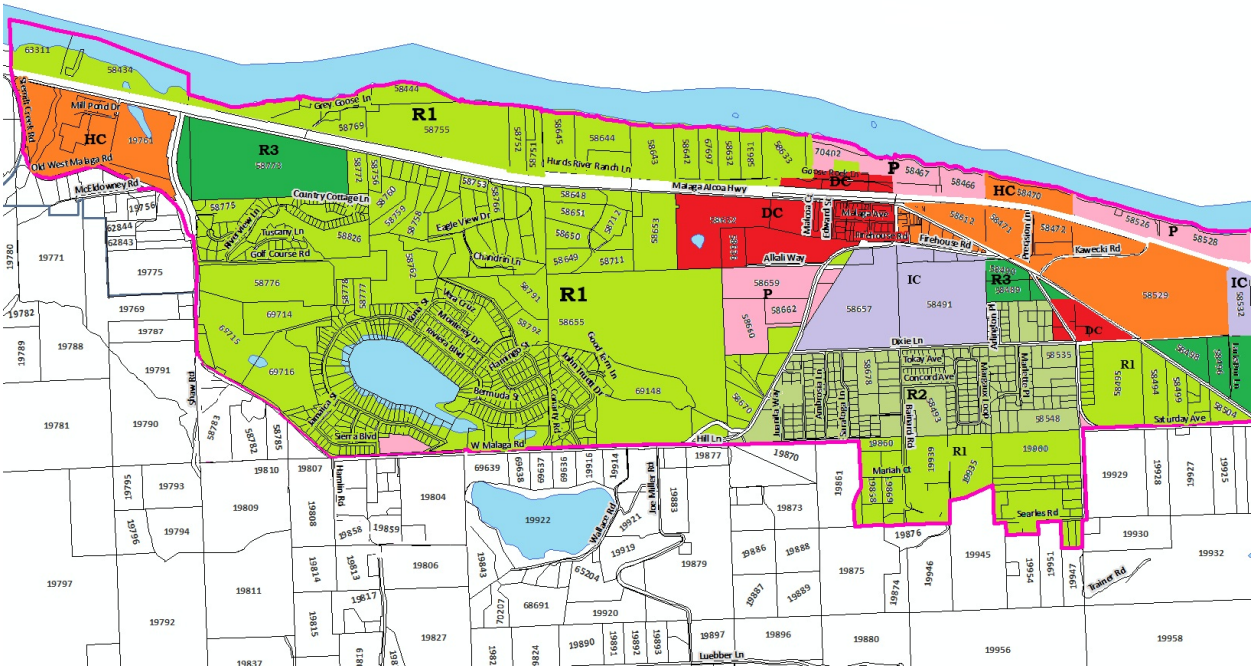
conducting a sewer study and plan for the central area of Malaga, should the LAMIRD be redesignated as a UGA. While financing options are not yet confirmed, the Chelan Douglas Regional Port Authority board designated the Malaga area as a Tax Increment Financing District, with the first listed funding item being a sewer plan and wastewater treatment. Although it is not completed, this TIF plan shows that there are financing options available for a wastewater treatment plant pending conversion to a UGA and the ability to install sewer in Malaga. Specific property for the plant would be identified during the planning process and would be reviewed as a conditional use in all districts.

Malaga UGA Zoning

The conversion of Malaga from LAMIRD to UGA gives the community the opportunity to transition from more broad zoning categories to more specific zoning, such as Campus Industrial; Industrial; Highway Commercial; Downtown Commercial; and Low, Medium, and High Density Residential. Proposed zoning within the UGA would align with zoning currently applied in Peshastin. The range of zoning being considered for Malaga is intended to reflect existing development patterns and concentrate land uses.

Figures 1 and 2 include the currently proposed zoning maps of the proposed Malaga UGA. Larger versions are included with Attachment A.

Figure 1
Malaga UGA (West)



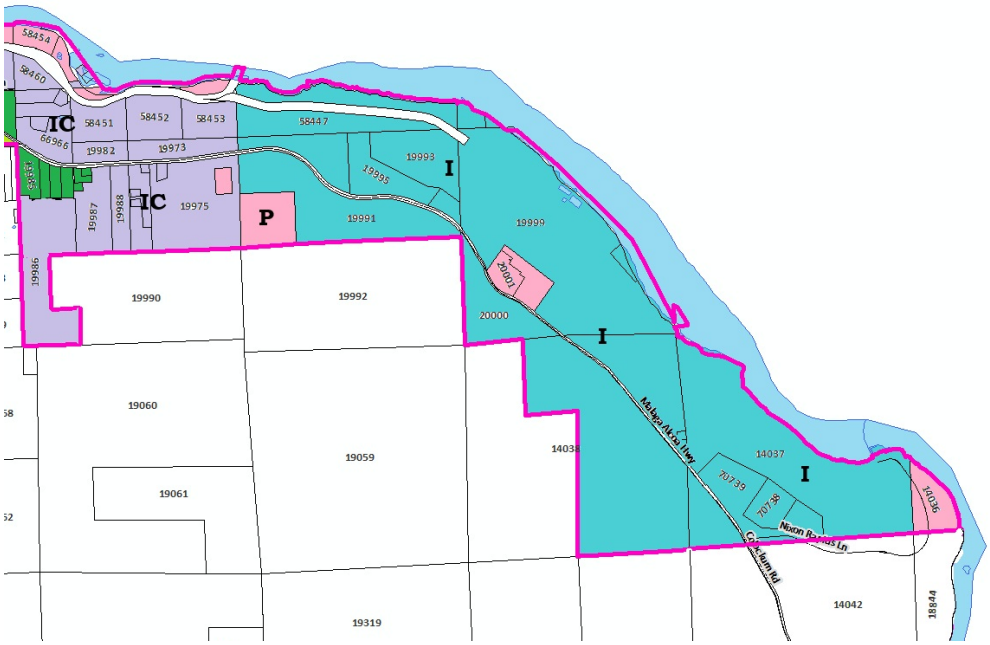


Figure 2
Malaga UGA (East)

Conclusion

Chelan County can consider UGAs and their boundaries this year, along with the periodic update of the Comprehensive Plan. In considering Malaga as a UGA, the following rationale, goals, and policies could be added to the Comprehensive Plan, demonstrating consistency with the RCW and WAC (Attachment E).

Rationale

- The proposed Malaga UGA is characterized by urban levels of development within a larger community of rural and agricultural uses.
- Malaga is projected and planned to accommodate future growth, including a percentage of the County's low income housing stock.
- Malaga is currently underserved by the existing rural services, resulting in nitrate contamination to groundwater from existing septic systems.
- Urban services can be provided to Malaga. Several entities, including the Port, Chelan County, and MWD, have earmarked funds and are prepared to pursue a planning process for installing sewer and wastewater treatment capabilities in Malaga once the conversion to UGA is approved and this critical urban service can be provided.

- By defining the boundary of the UGA and increasing development potential in town will ease development pressure on surrounding RR5 and RR10 and help preserve the surrounding rural and agricultural resource lands.

Goals/Policies

- Increase density of development in central part of Malaga.
- Zone UGA appropriately, looking to other UGAs for compatible zoning.
- Encourage further economic development in underutilized commercial and industrial lands.
- Plan for and implement utility construction and extensions, especially sewer.
- Coordinate with other providers, including Link Transit, to increase the levels of service in Malaga.
- Adjust rural population allocations commensurate with new UGA and allocated growth in Malaga.
- Add Malaga infrastructure to the capital facilities plan and utilities elements of the Comprehensive Plan.

DRAFT

1 Introduction and Plan Framework

The Stehekin Community Plan provides a framework to guide land use, development, and public investment in a way that reflects the community's priorities and the unique conditions of the Stehekin Valley. Developed in coordination with Chelan County, partner agencies, and community members, the Plan outlines a shared vision for maintaining a viable, year-round community while recognizing the area's limited infrastructure, environmental constraints, and predominant public land ownership. As a supplement to the *Chelan County Comprehensive Plan*, it is intended to inform decision-making, support coordination among agencies, and help ensure that future actions align with the long-term needs and character of Stehekin.

1.1 Purpose and Authority

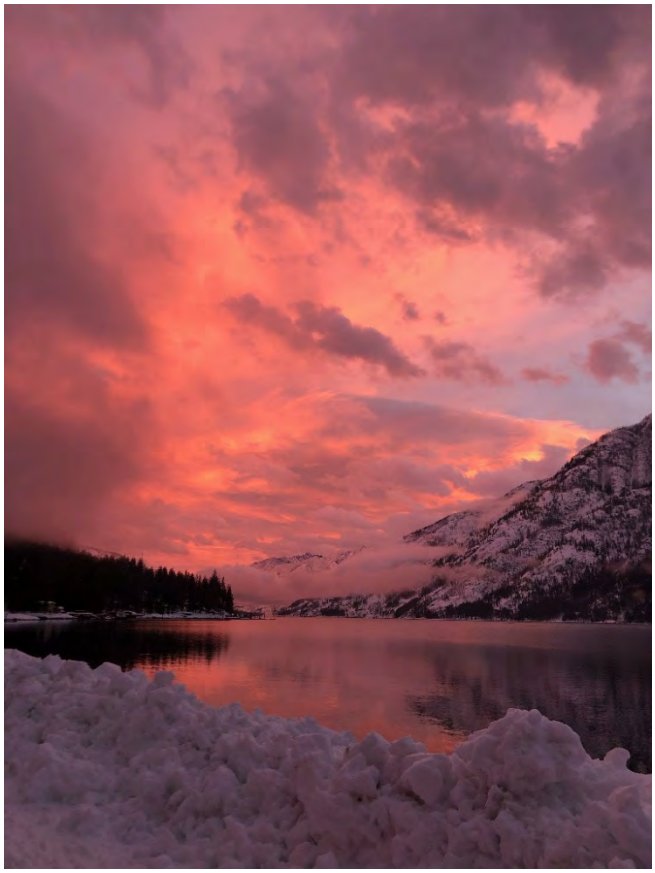
The purpose of this Plan is to guide decision-making for the Stehekin community in the years to come. It is intended to be reviewed on a regular basis and remain aligned with the community's vision, including:

- Community Engagement
- Community Priorities
- Goals and Policies

This Plan acknowledges the importance of critical local services and infrastructure, such as the local school, post office, power utility, and daily ferry service and freight barge, as well as the effects of the National Park Service (NPS) policies and decisions on the Stehekin community.

This Plan will be adopted by the Chelan Board of County Commissioners and Planning Commission as an appendix to the *Chelan County Comprehensive Plan*. It supplements Chelan County's Comprehensive Plan with detailed, specific guidance tailored to Stehekin's distinct social, economic, and environmental context. It provides clear policy direction and strategic guidance for land use, interagency partnerships, and public and private investment, serving as both an advocacy tool for the community and a coordination framework for the stewards and agencies who shape Stehekin's future.

1.2 Community Vision



The Stehekin Community Plan exists to support Stehekin's future as a viable, year-round community anchored by permanent and long-term residents and families, and essential community services.

The Stehekin Community Plan outlines the goals that the community has identified to be in their best interest and which support the community priorities in Section 3 of this Plan. Goals of the Plan are as follows:

1. Support the year-round community, including essential community services for permanent and long-term residents and families, and sustain services available to visitors of the valley.

2. Consider zoning alternatives that support the appropriate use of land throughout the community and preserve or increase the existing viable private land base to enable the community to continue to thrive.
3. Proactively work toward long-term measures that address and respond to fire, floods and other natural disasters.
4. Continue to conserve, protect, and maintain scenery and natural resources in the community.
5. Facilitate the adequate provision of public services that align with the needs of the community.

Documenting community priorities, values, and long-term goals informs future decision-making in the Stehekin Valley to remain grounded in a shared vision beyond short-term pressures. By proactively guiding near- and long-term decisions, the Plan helps ensure that choices at every level reflect the community's vision of Stehekin as a safe, resilient, and sustainable place to live and recreate.

1.3 Planning Context

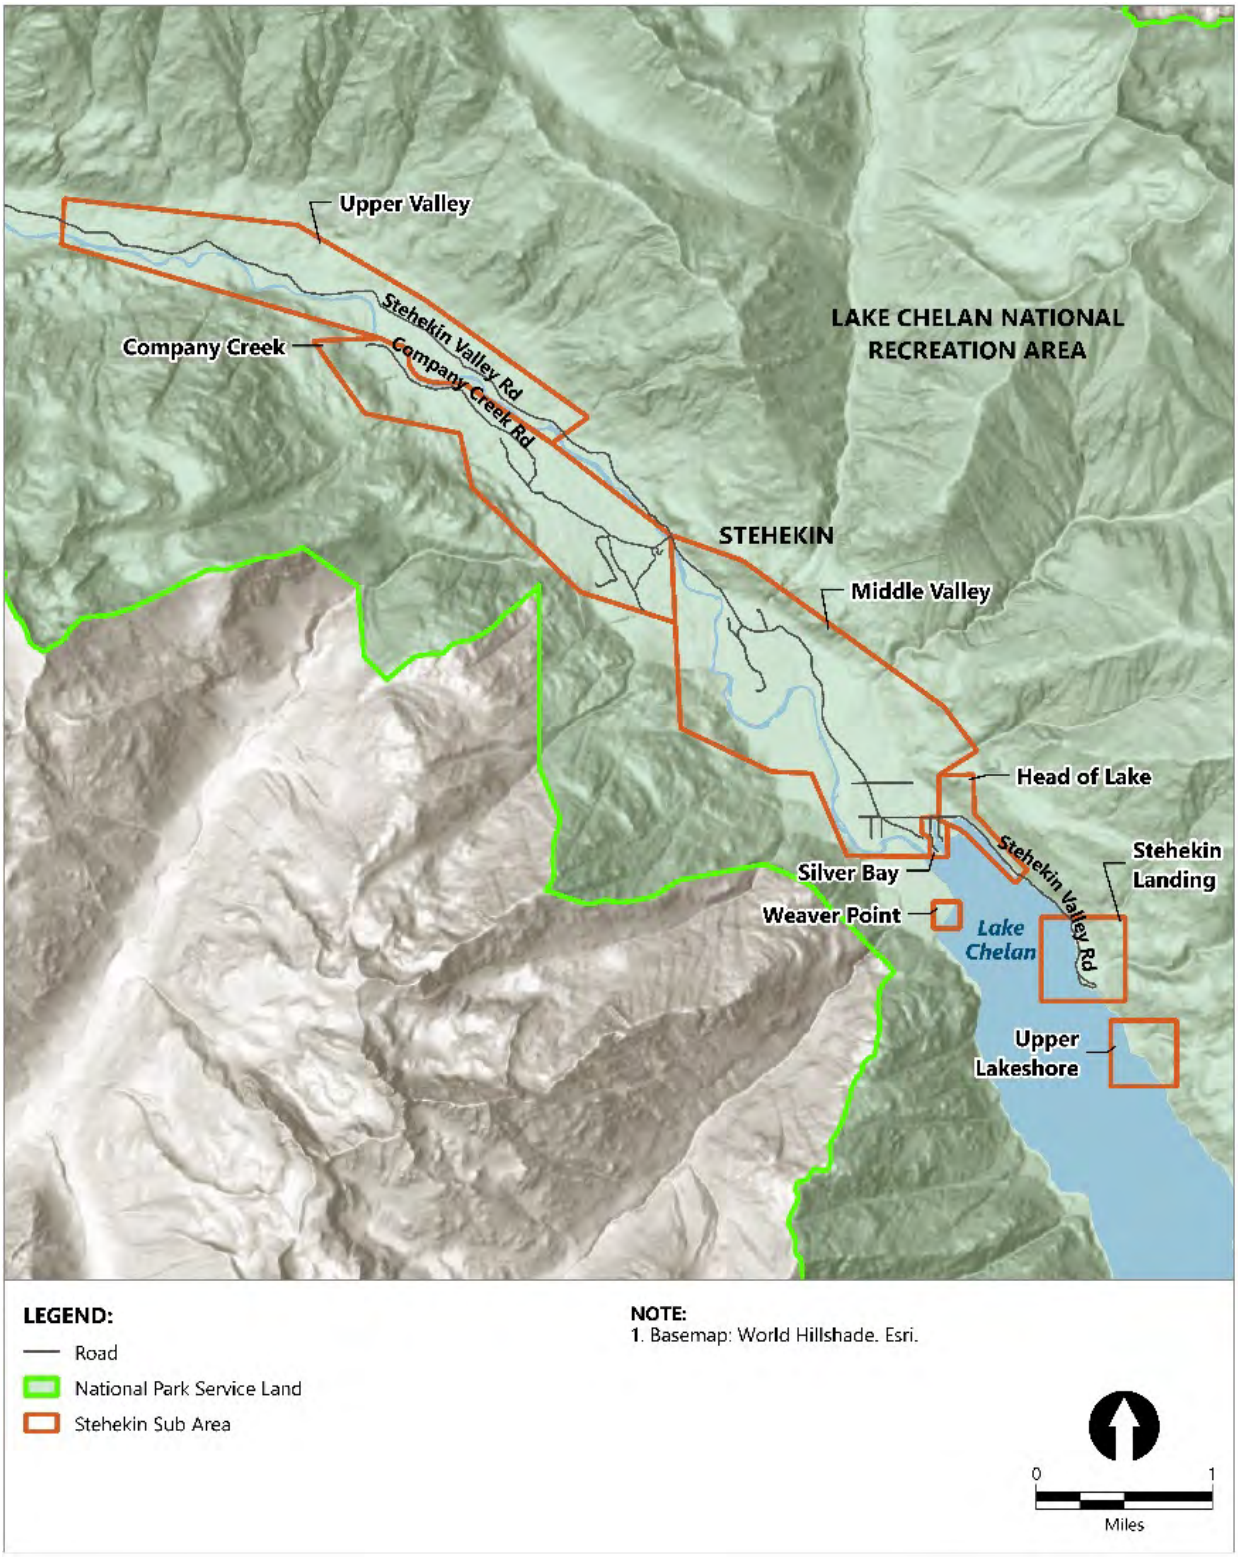
1.3.1 Background

Stehekin developed as a small valley community at the head of Lake Chelan in Chelan County, Washington. The community pre-dates the establishment of the Lake Chelan National Recreation Area (LCNRA) in the North Cascades National Park Service Complex (1968) and has long consisted of private residences, small-scale agriculture, recreation services, and resource-based livelihoods. The valley was located within a trade route between coastal indigenous Tribes and interior Tribes but was not permanently occupied until the late 1800s, when settlement occurred in response to mining, timber harvest, trapping, and early tourism.

The first sail of the “Lady of the Lake” on Lake Chelan was in 1900 to access the mines located in the valley, which initiated land claims and some of the initial homesteads in the area. In 1927, Lake Chelan was dammed and raised 21 feet, which marked the end of the Field Hotel, an elegant tourist destination at the head of the lake. Today, the Stehekin Landing acts as the point of entry for visitors arriving by watercraft.

Stehekin is accessible only by air, boat, or foot; the nearest road access is approximately 18 miles away. Two primary roads (Stehekin Valley Road and Company Creek Road) provide internal access and are managed and maintained by the NPS. Road standards vary, and steep terrain presents evacuation and emergency response challenges. Public infrastructure includes a hydroelectric power plant, distribution lines, visitor facilities, campgrounds, bridges, maintenance facilities, and housing. A 100,000-gallon water tank and hydrants serve the Stehekin Landing area. Water sources include private groundwater wells, Lake Chelan, and the Stehekin River.

Fire protection is provided by Chelan County Fire District #10 (formed in 2006), with support from NPS and other agencies. Fire District #10 encompasses the Stehekin Valley and shoreline down-lake to Lucerne.



The planning area is surrounded by the Glacier Peak Wilderness, the LCNRA, and the Lake Chelan Sawtooth Wilderness, reflecting Stehekin's embedded relationship within a largely federal land management framework. Governance and services involve coordination among Chelan County, Chelan County Public Utility District (Chelan PUD), the NPS, the U.S. Forest Service (USFS), the U.S. Army Corps of Engineers (USACE), and the Washington State Department of Natural Resources (DNR).

1.3.2 Existing Land Use and Community Character

Existing land-use patterns in the Stehekin Valley reflect a dispersed rural settlement structure shaped by natural constraints and historic development patterns.

The character of residential development is low density and is integrated with the surrounding landscape. Residential development is distributed among several identifiable subareas, including Upper Lakeshore, Stehekin Landing, Head of Lake, Silver Bay, Middle Valley, Company Creek, and Upper Valley (see Figure 1.3.2). Dwelling types consist primarily of single-family homes and cabins, including rental units, along with historic structures and associated accessory outbuildings. The land between each of these distinct subareas is owned by the federal government as public open space. Often this property is encumbered by critical areas (steep slope, the river), further ensuring that the open space will be protected in perpetuity—and that the subareas will remain separate.

Figure 1.3.2
Sub Areas

Commercial and visitor-oriented uses are generally concentrated in Stehekin Landing and in portions of the Middle and Upper Valleys. This includes a resort complex with cabins and a restaurant (Stehekin Valley Ranch), as well as a bakery and rental cabin operations. Visitor attractions include Rainbow Falls, Buckner Orchard Homestead, and small public parks along the lake.

Environmental constraints that substantially influence land use throughout the valley include steep slopes, floodplains, riparian vegetation along streams, and elevated wildfire risk.

1.3.3 Previous Planning Efforts

This section summarizes key prior plans and efforts that have shaped land use, policy direction, and investment decisions affecting the community. These efforts provide context by documenting prior community input, agency actions, and strategic priorities. This is not a comprehensive list of resources.

- Establishment of Lake Chelan National Recreation Area pursuant to 16 U.S.C. § 90a–1 (Public Law 90–544, 1968).

- *Chelan County Shoreline Master Program*, 2024.
- *North Cascades National Park Service Complex Rehabilitate Stehekin Landing Marina to Improve Visitor Access and Services Plan* (ongoing).

1.4 Planning Approach

Stehekin has a long history of planning efforts from both residents and public lands agencies. Those plans served as background to this current effort, which has been pursued as a collaborative and iterative process with County staff and community stakeholders, as well as with Chelan County (PUD). The effort is based in community conversation and storytelling, focus on key issues and concerns, and consistently returning to the community vision.

In the context of these conversations and this Plan, the following terms are used with the following meanings:

- *Community capacity* refers to both the availability of water and power to serve community members, as well as other public infrastructure such as road capacity, school system, and passenger ferry and barge service. Land availability affects capacity.
- A *viable year-round community* means that there are multiple people (families and individuals) who make Stehekin their primary residence throughout the year. Viability is considered in the sense that Stehekin residents would have access to social, economic, and physical well-being services within the community and would reduce their need to travel down-lake.
- *Compatible development* refers to new buildings or site modifications that preserve the natural environment and the feeling of living in the forest and are compatible with the purposes of the LCNRA General Management Plan. The current zoning ordinances of Chelan County are used to meet the compatibility criteria.

This Plan is meant to be a companion to the *Chelan County Comprehensive Plan*, with goals and policies to be considered over the next 20 years.

1.5 How to Use This Plan

The Plan informs County land-use decisions, zoning interpretations, and capital planning efforts, as well as decisions by partner agencies including the NPS and Chelan PUD. While the Plan does not supersede existing regulations, it clarifies the type, scale, and character of development anticipated in the valley and helps align regulatory and investment decisions with community priorities.

Additionally, the Plan can be used to evaluate proposals, track progress, identify gaps, and adjust strategies in response to changing conditions, ensuring that it remains relevant and useful over time.

This Plan does not create new regulatory authority on its own or override existing laws, but instead guides how existing regulations and agency actions are applied within a specific community context.

1.5.1 How This Plan Is Organized

The Plan is organized differently than the Comprehensive Plan. The Plan starts with a community profile and existing conditions discussing the natural environment and existing development, and providing an overview of the current land ownership and population in Section 2. Section 3 discusses community priorities that have been highlighted through prior planning efforts, community conversations, and recent events in the valley. Given the significant presence of the NPS and the LCNRA in Stehekin and the need for cooperation between NPS and the Stehekin community, Section 4 specifically addresses NPS policies and guidelines with implications for the Stehekin community. The land use and zoning strategy described in Section 5 outlines the existing land use

and zoning and provides potential direction to County government on zoning options, tools, and recommended approaches for the Stehekin community.

All of these subjects are summarized in a short section on key issues in Section 6, which provides the connection between community priorities and the goals and policies that have resulted from this work. The goals and policies are consolidated into Section 7 for ease of reference.

Finally, the Plan offers implementation strategies (Section 8) and a summary of public engagement (Section 9) as the foundation for this effort and for efforts moving forward.

2 Community Profile and Existing Conditions

2.1 Environmental and Physical Constraints

2.1.1 Fire/Forest Health

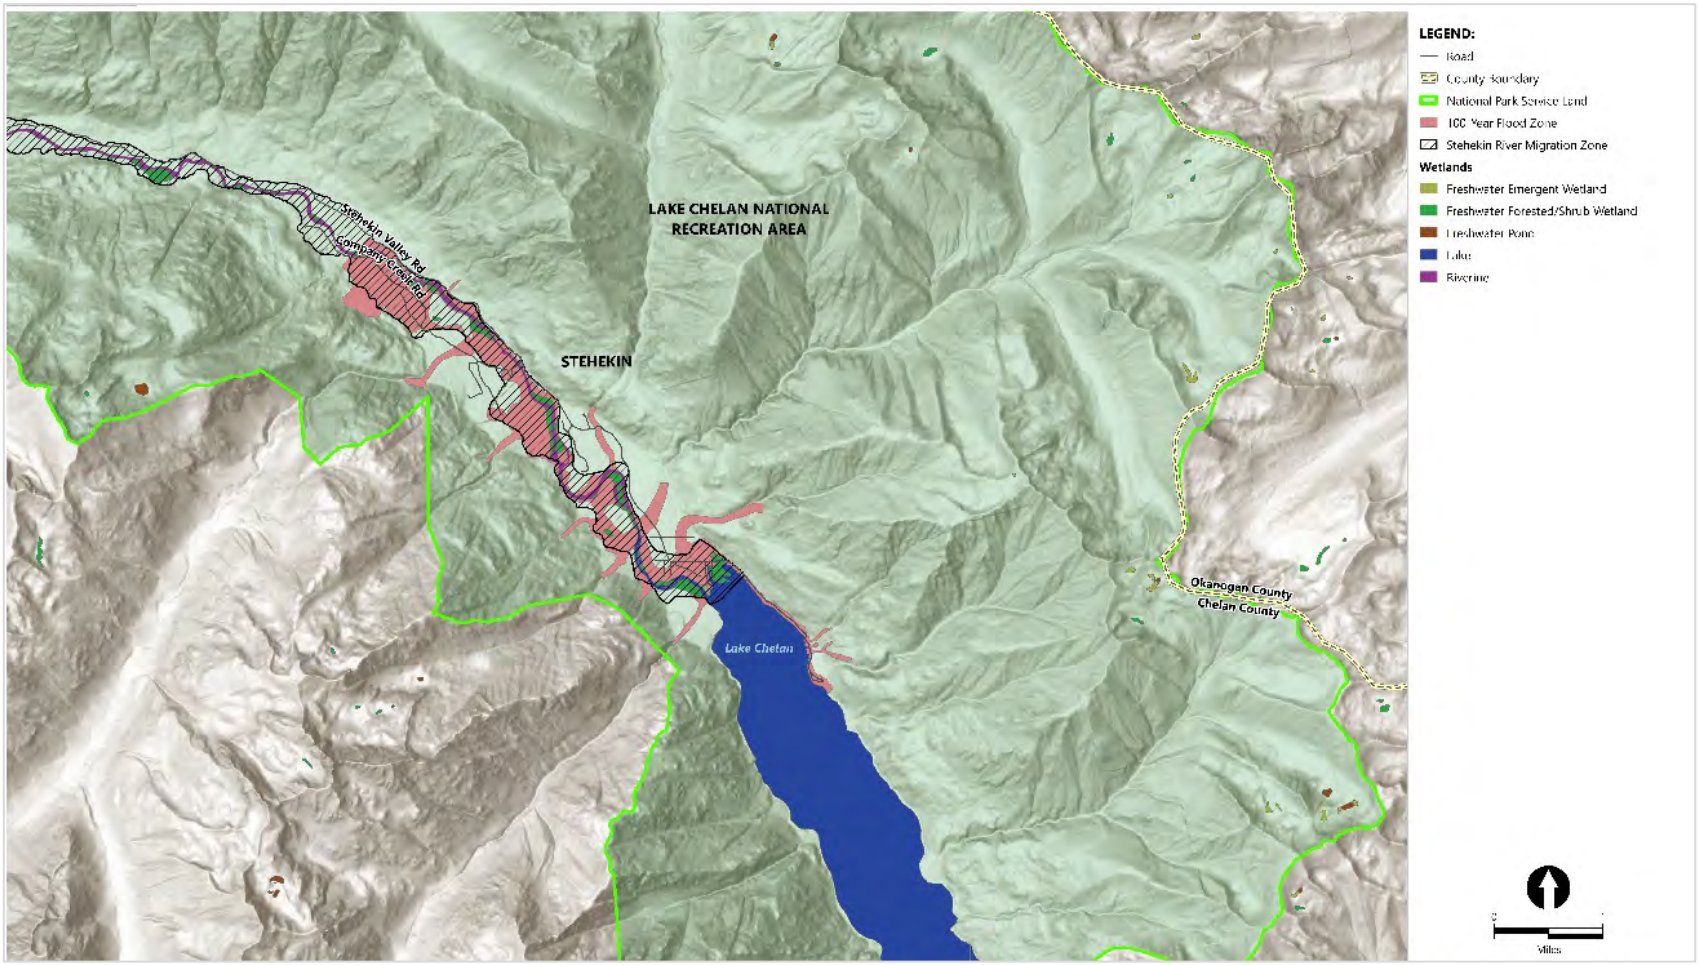
Stehekin is located in a forested setting where natural wildfires were historically part of the ecosystem. With human settlement came fire suppression activities to protect life and property, resulting in both increased fuel loading and the need to protect human life and structures. Over the past few decades the summer fire seasons have lengthened and wildfires have increased in frequency, intensity, and scale. In addition, Douglas fir forests damaged by insect and disease infestations are less resilient to wildfire. Limited firefighting access, steep topography, high fuel loads, and the lack of defensible space around many structures all increase risks to human life and safety as well as damage to or loss of buildings and crucial utilities in Stehekin. Chelan County defines the Wildland-Urban Interface (WUI) to encompass areas such as Stehekin where wildfire can move between natural vegetation and the built environment with negative impacts to the community. The 2025 *Chelan County Community Wildfire Protection Plan* (CWPP) indicates potential high to extreme

fire behavior in the Stehekin Valley, with the potential for all houses in the area to be exposed to embers from burning vegetation. The Stehekin Valley is designated by the County as a CWPP WUI Planning and Prevention Area.

Several entities provide incident response for wildfires in and around Stehekin. Chelan County Fire District #10 is a volunteer-based district established in 2006 specifically to protect the Stehekin Valley and immediate down-lake areas. The district works with the NPS, DNR, and Chelan County Emergency Management for wildfire response. Since 1990 the NPS has performed prescribed burns and thinning on over 1,000 acres in the Stehekin area to reduce wildfire risk. The 2008 Stehekin Valley CWPP included over 3,000 acres of planned prescribed fire units with perimeters designed to protect the WUI areas of Stehekin. Such mitigation efforts were planned to help reduce fuel buildup, enhance habitat, and create defensible space around infrastructure. However, in more recent years, the NPS has not continued such expansive prescribed burn efforts due to smaller burn windows.

Nevertheless, in 2024 the Pioneer Fire burned nearly 39,000 acres and threatened approximately 500 buildings in Stehekin. Wildfire conditions throughout Chelan County are expected to worsen over the coming decades, resulting in more days with poor air quality, slope destabilization, economic losses, fish and wildlife habitat degradation, reduced recreation access, and damage to utilities.

2.1.2 Flooding



Like other perennial streams in Chelan County, the Stehekin River and its tributary streams have historically followed an annual cycle, with peak flow in April and May and low flow in August and September. Flooding has historically been most likely during spring snowmelt (March to June) and during rain-on-snow events from November to February. Over the past several decades the Stehekin River has experienced large autumn rain-on-snow flooding, with severe floods in 1995, 2003, 2006, and most recently in late 2025. These floods significantly have changed the river channel and the boundaries of the 100-year floodplain.

Stehekin River floods have been growing larger and more frequent in recent years, and scientists predict that Chelan County will continue to experience these patterns in the future. It is likely that more winter precipitation will fall as rain rather than snow, reducing snowpack and increasing winter flow in streams, while less water is available during the summer for human needs as well as to support fish and wildlife. Developed areas that were previously considered safe from damage are now at risk from flooding, bank erosion, debris flows, and migration of the river channel. This creates critical constraints on development and increases risks in community safety from hazardous events.

In 2013, NPS published its Record of Decision for the Stehekin River Corridor Implementation Plan Final Environmental Impact Statement, identifying a suite of actions to address flooding and erosion in the valley. These actions include road maintenance, improvements, and relocations; Company Creek Road levee maintenance; slope stabilization; relocation of NPS facilities; riparian restoration

and bank protection using bioengineered techniques; and enhancement of recreational facilities. Another key component was the adoption of the revised 2012 Land Protection Plan (LPP), which includes several criteria NPS uses to prioritize land exchanges and as well as acquisition of land and easements from willing sellers. These criteria were expanded beyond the 100-year floodplain to include other areas where the river channel is moving and depositing sediments.

Figure 2.1.2
Stehekin River Flooding and Wetland Zones

2.1.3 Aquatic and Biological Resources

Stehekin is located in a unique natural setting where the Stehekin River joins the head of Lake Chelan. The Stehekin River drains a watershed of approximately 218,000 acres of mountainous terrain, and the river provides more than half of the annual inflow to Lake Chelan. Several tributary streams flow down the valley walls to join the river mainstem. The Stehekin River meanders across its floodplain, providing high-quality fish and rearing habitat, good spawning gravels, and abundant large woody debris that benefit fish and other aquatic organisms.

Human activities such as removal of shoreline vegetation and installation of bank stabilization structures directly affect aquatic habitats in limited areas, particularly in the lower valley. Erosion control structures installed using large wood may benefit aquatic habitat, while others (such as riprap) provide no direct habitat benefits and can have negative impacts.

Operation of the Lake Chelan Hydroelectric Project also affects shoreline vegetation and aquatic habitats. The Chelan PUD manages the lake as a reservoir, balancing multiple needs such as flood protection, power generation, fish habitat, irrigation, and recreation, with annual water level fluctuations of approximately 10 feet. The reservoir is drawn down during winter and spring each year for power generation and storage of spring snowmelt. Water levels are kept higher during the summer and early fall. Inundation of the lake shoreline near the mouth of the Stehekin River for long periods during the growing season shapes the plant communities that can grow in these areas. As part of its hydroelectric licensing agreements with FERC, Chelan PUD developed a plan for controlling reed canary grass, an invasive species that tolerates seasonal flooding, and replanting native species on NPS parcels along the lakeshore in the Stehekin Landing area.

The Stehekin River supports numerous fish species, including kokanee, rainbow trout, mountain whitefish, and westslope cutthroat. Westslope cutthroat have experienced declining populations as a result of factors such as past overharvesting, hatchery practices, and introduction of non-native species. Bull trout have not been observed in Lake Chelan or its tributaries for several decades, perhaps as a result of overharvesting, flooding damage to spawning areas, and competition with other native and introduced fish species. In contrast, the population of kokanee fluctuates from year to year but appears to be expanding, with tributaries of the Stehekin River providing most of the

kokanee spawning in the basin. Kokanee are a native species but were introduced to Lake Chelan beginning in the early 1900s and are a popular game fish.

The Stehekin Valley provides extensive coniferous and mixed forests, wetlands, and shoreline (riparian) trees and shrubs that provide habitats for mammals, birds, reptiles, amphibians, and invertebrates. Birdwatchers have recorded more than 150 different bird species at Stehekin, including waterfowl, songbirds, herons, raptors, gulls, woodpeckers, hummingbirds, and others. The Washington Department of Fish and Wildlife (WDFW) has recorded several state priority species in the Stehekin area, including western gray squirrel, western toad, mountain goat, and mule deer.

The U.S. Fish and Wildlife Service (USFWS) indicates that several wildlife species listed under the federal Endangered Species Act (ESA) may occur in the Stehekin Valley and surrounding lands, including the Canada lynx, gray wolf, North American wolverine, Mt. Rainier white-tailed ptarmigan, and northern spotted owl.

In 2024, the NPS and USFWS finalized a plan to reintroduce grizzly bears, another federally listed species, to the North Cascades. The agencies plan to release a few grizzly bears per year for the first 5 to 10 years of the program to establish a founder population, with an eventual population goal of 200 bears within 60 to 100 years. The population would be designated as "nonessential and experimental," allowing for more flexibility in managing bears should conflicts with humans occur. Release sites are intended to be largely roadless areas with little human use and the presence of high-quality habitat and food sources for grizzly bears. During agency drafting of the Plan, local residents expressed concern about bear habitat and food availability, potential bear attacks, hiker safety, additional government regulation, and impacts to tourism.

The gray wolf is a native Washington species that was nearly eradicated from the state in the early 1900s. Wolves have not been actively reintroduced but have returned to Washington by dispersing from populations in nearby states and from Canada. Gray wolves are federally listed as endangered in the western two-thirds of Washington including Chelan County. They are classified as endangered under state law (Washington Administrative Code [WAC] 220-610-010) throughout the state, regardless of their federal ESA classification. WDFW is managing gray wolf recovery statewide in accordance with a plan to address conflicts with humans and livestock. WDFW biologists conduct an

annual wolf population survey to obtain a minimum count of wolves in the state. As of December 2024, WDFW documented two gray wolf packs in the Stehekin area with a combined (estimated minimum) pack size of less than 20 individuals.

Human activities and changing environmental conditions pose challenges to fish and wildlife habitats and populations. Removing native vegetation for development reduces habitats for native species. Loss of woody vegetation along shoreline reduces the shade needed to keep waters cool for native fish species. Other human activities can have more subtle but still important impacts on fish and wildlife. Water pollution from boats or improperly maintained septic systems can be toxic to wildlife or result in damaging algal blooms. Recreation activities outside of designated areas can cause trampling of vegetation or disturb wildlife.

On a broader scale with changing environmental conditions, the natural seasonal patterns of stream flows are shifting, affecting habitat for native fish species and potentially making conditions better for invasive aquatic species. Forest health is challenged by insects, diseases, and very intense wildfires.

2.2 Community Characteristics

An informal census shows about 160 residents in the valley, with about 95 residents using Stehekin as their primary home year-round. Residents are a mixture of families with young children (enrollment at the one-room school is around 15 children per year), local and remote employees, and retirees. During the summer, about 70 seasonal workers

arrive to support the visitor services at the landing, the Stehekin Bakery, and other recreational properties.[1]

2.2.1 Community Character

Stehekin is a remote, close-knit community defined by its geographic isolation, seasonal population shifts, and strong culture of self-reliance. Year-round residents form the core of the community, with additional seasonal residents, NPS staff, business owners, and visitors contributing to the social and economic fabric throughout the year.

The community is characterized by:

- A resilient, self-reliant population with a strong commitment to sustaining a year-round community in a remote environment
- A culture of cooperation and mutual support, rooted in long-term residency, shared stewardship, and neighbors relying on each other, particularly during emergencies
- Limited access to traditional infrastructure and essential services, resulting in a strong reliance on local knowledge, community cohesion, resilience, and forward-thinking approaches to meet community needs
- A shared appreciation for Stehekin's natural environment and wildlife, outdoor recreation, and services that support visitor experiences

Community gathering spaces and institutions—including the school, community center, local businesses, and NPS facilities—serve as important hubs for connection and information sharing.

The community wanted to emphasize the importance of preserving the unique and longstanding character of Stehekin's homes, structures, and settlement patterns. Many homes and community features reflect historic development patterns that pre-date the establishment of the national recreation area. The Courtney Homestead on Company Creek Road serves as a classic example of early pioneer settlement of Stehekin and has been surveyed by NPS as a potential interpretive site. The community layout and the design of Stehekin's homes and settlements contributes to the identity and heritage of Stehekin and should be recognized and preserved as part of the community's history and continued viability. Economic stability in this context does not imply large-scale growth or

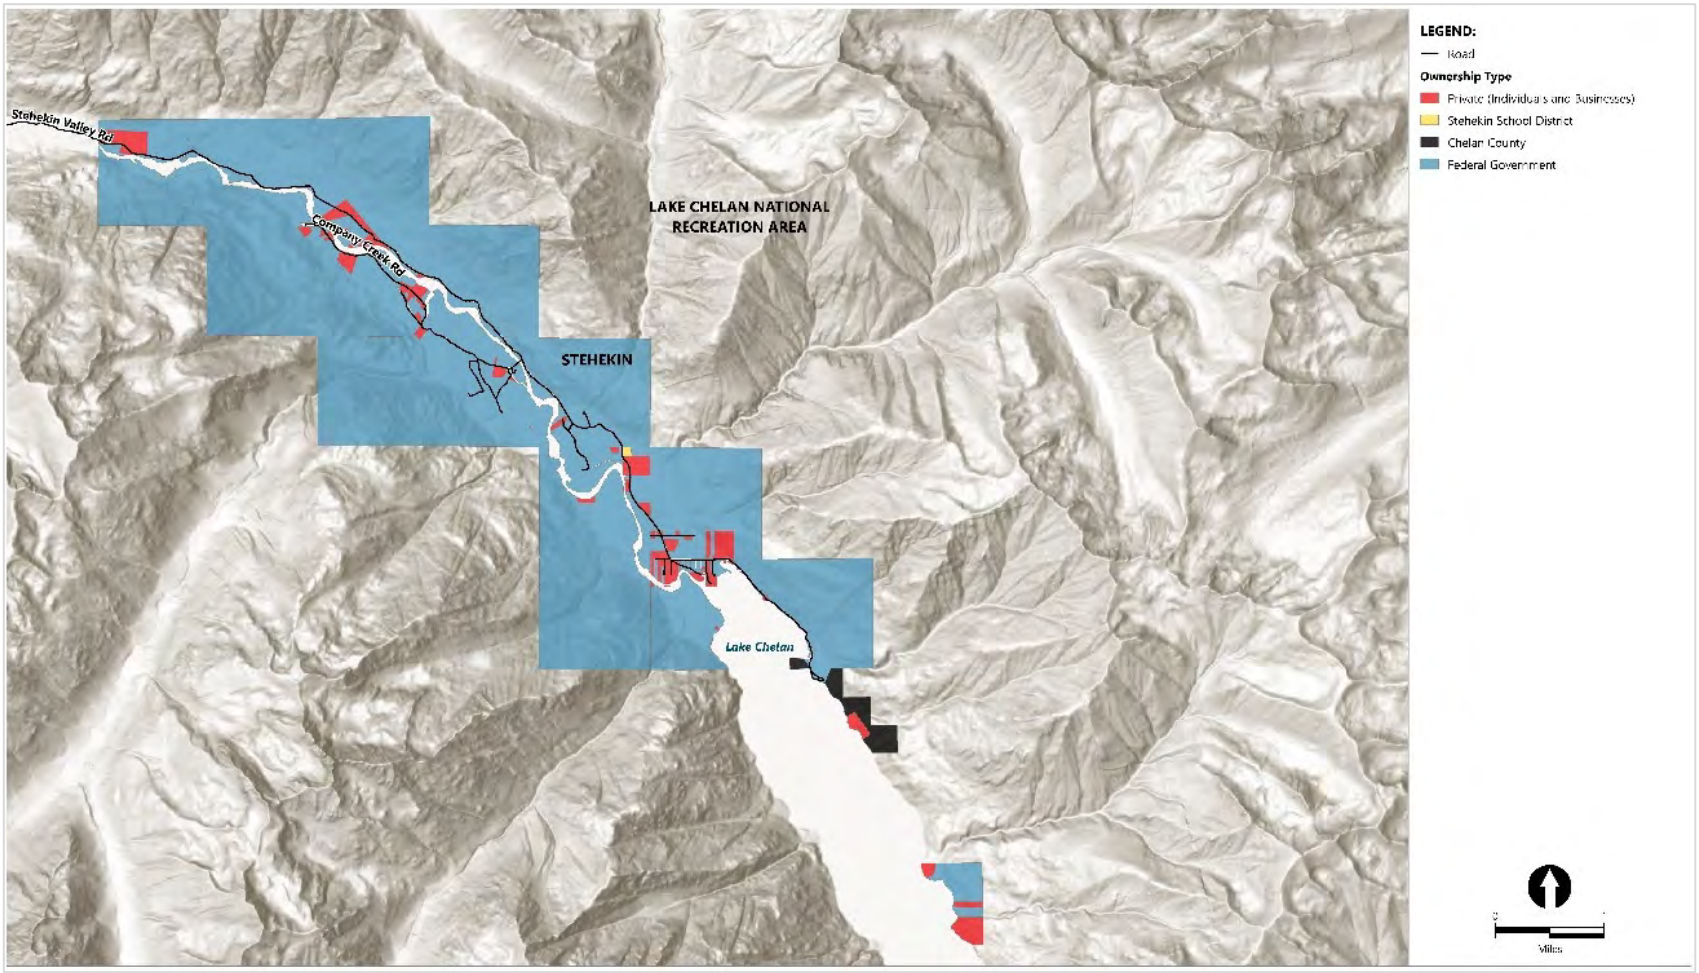
[1] This number is based on anecdotal estimation from residents of the valley.

expansion but rather a stable, resilient community that can sustain essential services, provide opportunities for residents, and support visitors without degrading the environmental and visual qualities that make the valley unique.

2.2.2 Economic Structure

Economic stability in Stehekin has historically reflected the community's remote location, limited land base, and close relationship with the surrounding natural landscape. Since the early 1900s, the local economy has evolved from a primarily subsistence and resource-based system to one that relies heavily on recreation and tourism. Early residents supported themselves through activities such as small-scale agriculture, fishing, guiding, and services for travelers arriving by boat along Lake Chelan. While these activities still influence the character of the valley, the modern economy centers largely on visitor services, hospitality, transportation, and recreation related businesses.

Today, Stehekin's economy depends on a mix of seasonal tourism, essential community services, and the presence of permanent residents who provide labor, management, and stewardship of local businesses and infrastructure. Many jobs in the valley relate directly or indirectly to visitor activity during the peak summer season. At the same time, the community requires year-round residents to operate businesses, maintain infrastructure, and support critical services. Because Stehekin is located within the LCNRA and accessible only by boat, aircraft, or trail, economic activity remains small in scale and closely tied to the natural environment that attracts visitors.



Several public entities also play a significant role in sustaining the local economy and community infrastructure. The NPS is responsible for maintaining roads, trails, and facilities and provides essential services such as garbage and recycling collection at no cost to the valley's residents. Chelan PUD supplies electricity through the community's local hydropower system and provides power at relatively low cost compared to many remote communities. These services reduce operating costs for residents and businesses and help sustain basic community functions.

2.3 Land Ownership and Land Use

2.3.1 Parcel Ownership

Currently, private parcel ownership within the Stehekin Valley amounts to approximately 294 acres (Figure 2.3.1-A). Nearly all of the privately owned parcels are currently zoned Rural Residential (RR), ranging from RR2.5 to RR20, with a few parcels zoned Rural Waterfront (RW) and two parcels embedded in the Rural Public (RP) zoning.

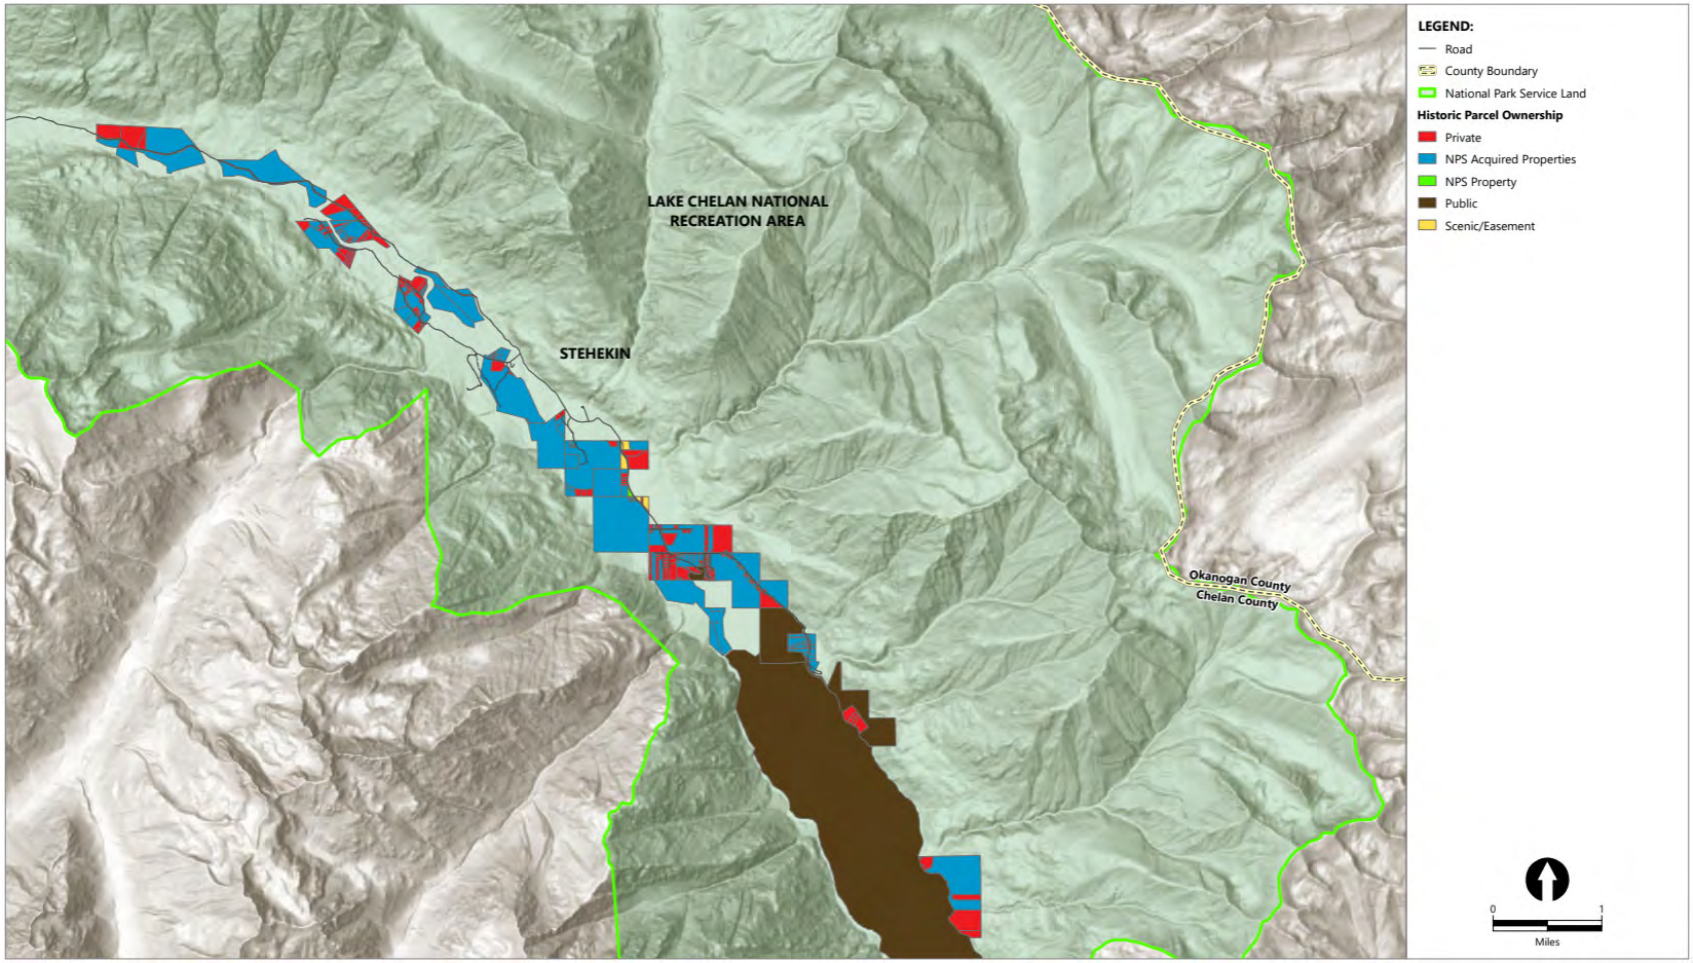
Figure 2.3.1-A
Parcel Ownership

The NPS and the Chelan PUD also own multiple parcels in the valley. Many of the parcels are in the floodplain or along the steep slopes on the edges of the valley, but the NPS also owns approximately 68 acres of land zoned RP near Stehekin Landing and the Golden West Visitor Center and about 95 acres of RR20 and RR5 property on Company Creek Road. The NPS also owns all but one of the parcels on the water side of Stehekin Valley Road near Stehekin Landing, with the barge dock privately owned and the ferry landing owned by Chelan PUD. While the federal government is not subject to local regulation for federal activities on federally owned land, this underlying zoning would apply to any private activity or if the NPS were to sell or otherwise transfer property ownership.

Private land ownership in the Stehekin Valley has declined since the establishment of the LCNRA in 1968 as the NPS began private property acquisition. As of 2026, approximately 294 acres of land remain under private ownership compared to approximately 1,700 acres in 1968. These lands are divided among approximately 170 parcels, the majority of which support residential uses. Approximately 120 of the privately owned parcels contain one or more residential units. Privately owned land represents a limited but important component of the community's housing base and overall development capacity.

Over time, the amount of privately owned land in the Stehekin Valley has declined as parcels have been acquired by or transferred to the federal government and incorporated into the surrounding public lands managed as part of the LCNRA (Figure 2.3.1-C). These acquisitions have helped support long-term resource protection and the management goals of the NPS.

Figure 2.3.1-B
Historic Parcel Ownership



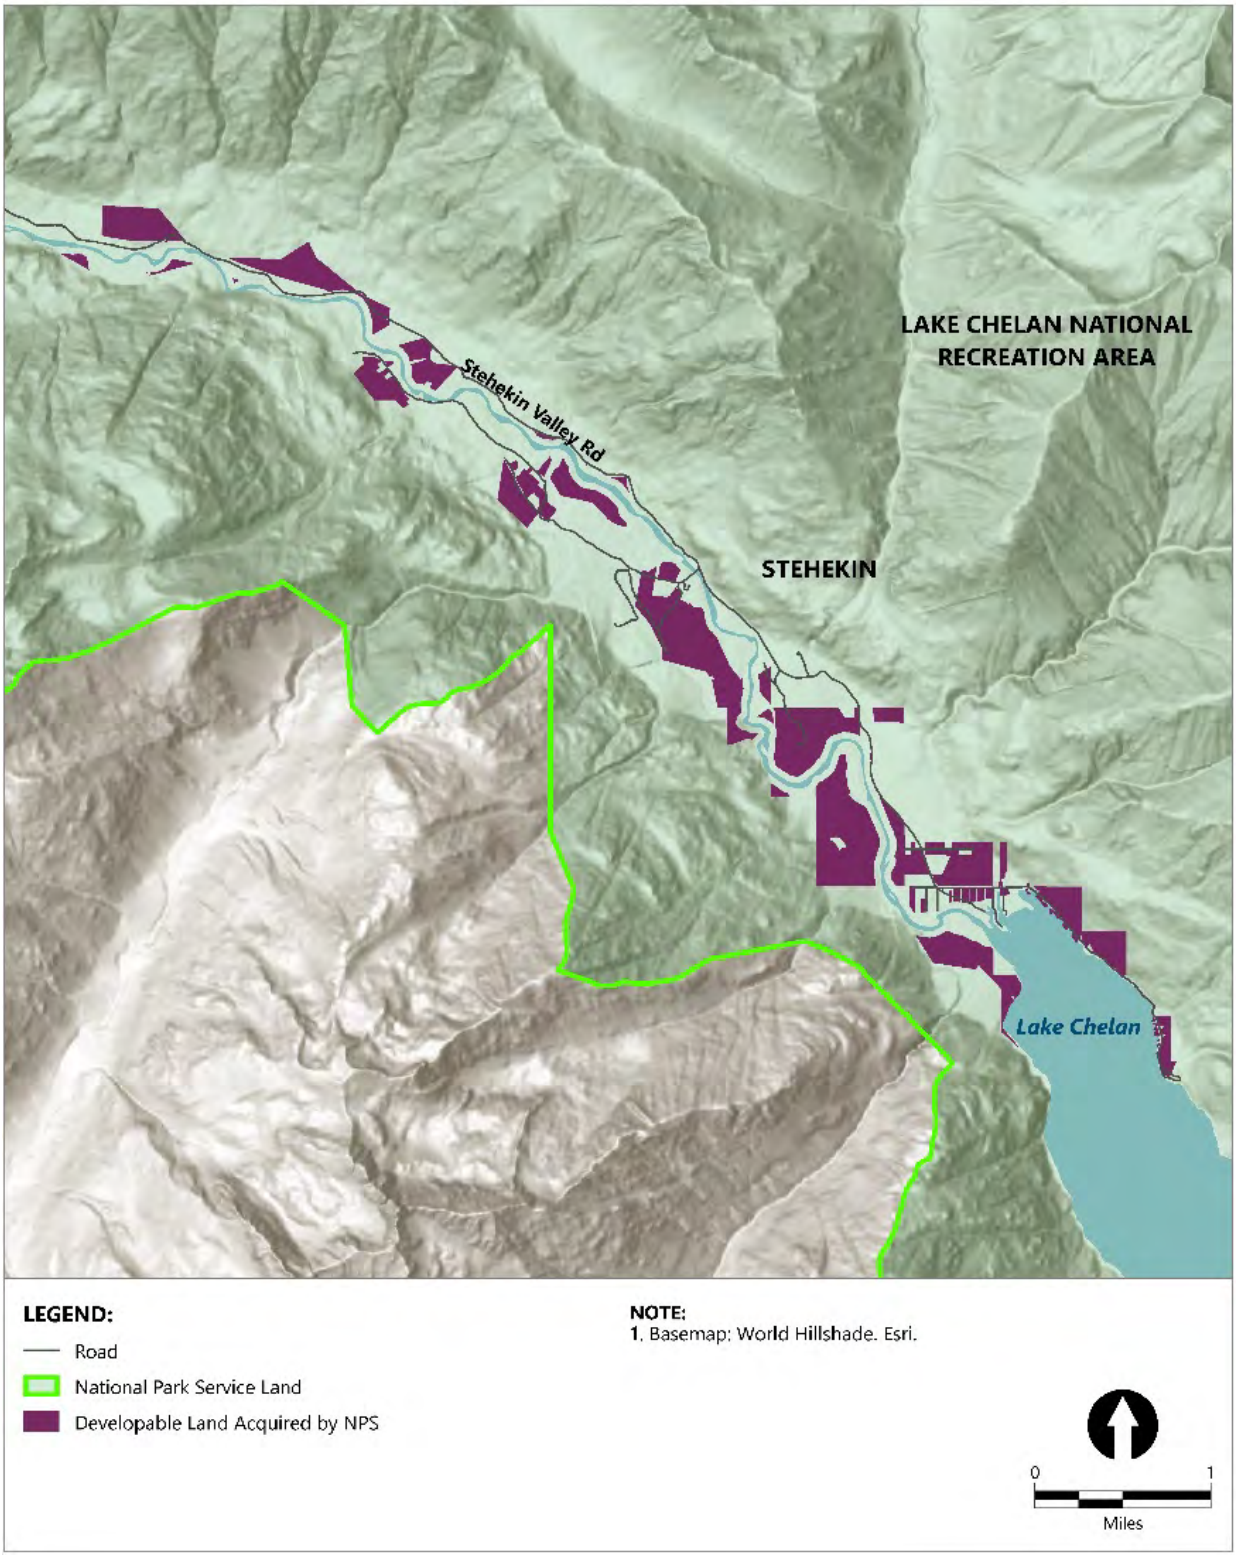


Figure 2.3.1-C
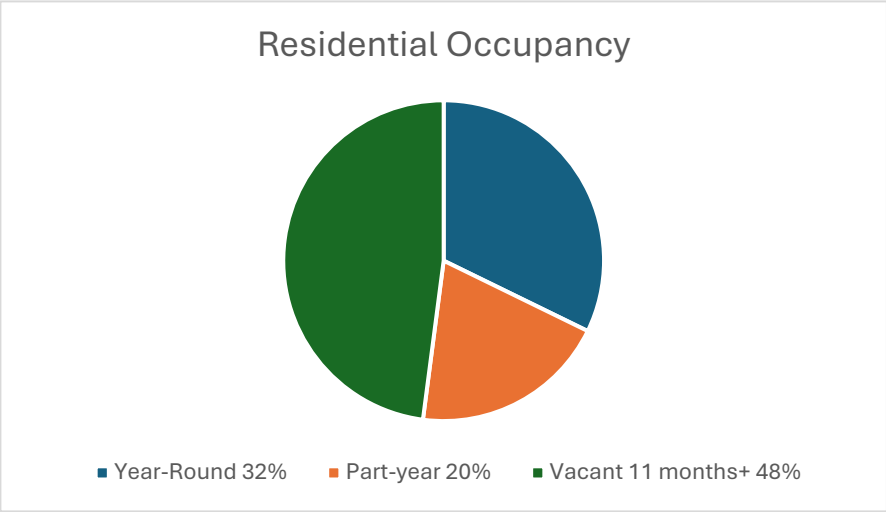
Developable Land Acquired by NPS



2.3.2 Residential Occupancy

There are approximately 121 primary residential units in Stehekin today (not including accessory units or multi-unit rentals). Historical housing data indicate that residential development continued after the establishment of North Cascades National Park (NOCA) despite reductions in the total acreage of privately owned land. A 1980 case study documented 101 completed dwellings in the valley, including 57 constructed prior to 1968 and 44 constructed between 1968 and 1980, indicating substantial residential growth during that period. Since 1980, the number of residential units has continued to increase, reaching the number of approximately 121 residential units today, with additional accessory dwelling units (ADUs) and rental units also present in the valley.

An informal census completed by valley residents estimates that nearly half of the houses are not occupied on a regular basis, and only about 40 units are occupied year-round. The breakdown from that census is shown in Figure 2.3.2.

Figure 2.3.2
Residential Occupancy

2.3.3 Development Limitations

Of the 170 privately owned parcels, approximately 117 are located, at least partially, within the 100-year floodplain of the Stehekin River. Flood hazard areas can limit the ability to construct new structures or expand existing development, particularly where flood risk or regulatory requirements restrict building. Flooding has historically affected residential areas in the valley and continues to influence both the location and durability of housing in the community.

Additional constraints reduce available developable land. Some parcels include title restrictions that limit their use, while others contain critical areas such as steep slopes that restrict or preclude

construction. When these limitations are considered alongside floodplain constraints, only a portion of the remaining private land base can realistically support new residential development. In total, approximately 275 acres of privately owned land are considered buildable or usable. These constraints are further discussed in Chapter 5. While this is about 90% of the private land base (294 acres), this does not account for existing development on the parcels, which may preclude additional housing.

2.4 Infrastructure and Services

Utilities in the Stehekin community reflect the valley's remote location and small population. Core services such as electricity, water supply, wastewater treatment, and solid waste management are provided through a combination of public infrastructure, local utility providers, and individual systems. Because Stehekin is not connected to regional utility networks, most infrastructure operates at a small scale and serves a limited number of customers. As a result, the capacity and reliability of these systems can influence the location and amount of future development, including housing.

Electric service in Stehekin is provided by Chelan PUD through a hydroelectric facility on Company Creek. The system supplies power to most residences, businesses, and public facilities in the

community. While the hydroelectric facility generally meets current demand, its limited scale means capacity is constrained without improvements and upgrades. In 2025, Chelan PUD installed advanced metering infrastructure (AMI) to collect high resolution data to inform future upgrades in the Stehekin electric system to meet community demands.

Water supply in the Stehekin Valley is provided through a combination of private and public systems. Residents obtain water from individual groundwater wells, small shared community water systems, and surface water sources. The NPS operates a water treatment facility that serves NPS facilities and other users in the Stehekin Landing area.

Wastewater management primarily relies on individual septic systems, which must be designed according to Chelan-Douglas Health District standards.

Solid waste services are managed by the NPS through local collection and transfer systems that handle waste from residents, businesses, and visitors. Because Stehekin is accessible only by boat or aircraft, waste must be transported out of the valley by barge for final disposal.

Overall, utility systems generally function at a scale appropriate for the community, though future housing or development will require coordination with utility capacity to ensure reliable and sustainable services.

Chapter 7 of the *Chelan County Comprehensive Plan* provides a brief description of the public and private utility purveyors that operate in Stehekin and the larger Chelan County area and encourages these purveyors to align their capital improvements with the goals and policies of the Comprehensive Plan.

2.5 Regulatory Framework

Private property in Stehekin is regulated under Chelan County Code, including the zoning code, Shoreline Management Act, critical areas code, building code, and site development code. Limited staffing resources for the County also limit the amount of development oversight in the valley, and development/land use is largely self-regulated.

The NPS manages federal lands in the Stehekin Valley under direction established by Public Law 90-544 (1968), which created the LCNRA and NOCA. This framework requires NPS to protect the area's scenic, natural, and recreational values while accommodating the Stehekin community and existing private uses. Chapter 4 further expands on the role of the NPS in the Stehekin Valley.

3 Community Priorities

The Community Priorities section establishes the framework for guiding future decision-making in Stehekin. Stehekin exists within the LCNRA, a gateway community, in the North Cascades National Park Service Complex, and its wild landscape, ecological integrity, and relative remoteness define both its identity and its economic foundation. The valley's natural beauty attracts permanent residents, seasonal workers, and visitors from across the nation and world. At the same time, these assets create a challenge. As interest in living, working, and investing in Stehekin grows, there is perceived conflict between land development and the protection of the natural environment that sustains the community and its economy.

Stehekin is also a place with clear physical and resource limits. Access and private land is limited, infrastructure is small scale, and the surrounding landscape is environmentally sensitive. Some Community members have raised concerns that residential development may be approaching or exceeding what the valley can support, especially when higher intensity uses place greater demands on land, utilities, and services. The community has also identified the need to evaluate how existing public land ownership and activity may subsidize development at a cost to public assets and the natural environment. Input also highlights the need to examine how development aligns with long-term public and environmental interests.

The subsections below expand on the main topics identified by the Stehekin community as part of the outreach efforts; they summarize the current reality faced by the community, pressing community needs, and potential solutions to be considered and adopted with this Plan.

The Plan will affirm the intent for Stehekin to remain a viable, year-round community with a core of permanent resident families and the necessary community support services.

3.1 Environment/Critical Areas

The wild, natural beauty of the North Cascades draws permanent residents and visitors to Stehekin and is the foundation of the local economy. The valley provides habitat for native plants, fish, and wildlife. However, living in a natural setting poses risks to the human life, safety, and infrastructure of Stehekin due to hazards such as wildfire, flooding, and debris flows.

3.1.1 Fire/Forest Health

Wildfires will continue to be part of life in the North Cascades and will likely become a greater risk for Stehekin in the coming decades. The community needs additional proactive fire prevention measures to reduce fuel loads, particularly along major roads and near primary structures and utilities. Emergency evacuation planning and adequate boat transport capacity are needed for residents and tourists during the summer wildfire season.

3.1.2 Flooding

Major flooding, debris flows, and erosion pose risks to human safety, structures, and critical infrastructure, as well as reducing recreational access. While the National Weather Service issues flood watches and warnings as rivers reach critical flood stages, the community needs more proactive measures to reduce risks before an emergency occurs.

Improved monitoring of river stages and better understanding of how increased sediment (bedload) and changing precipitation patterns are affecting flood risk are necessary to support floodplain management, maintenance decisions, and long-term investments. More resilient infrastructure is needed to prevent emergencies related to road and utility damage as well as potential future summer droughts. However, NPS, as the dominant land manager and primary governing authority in the Stehekin Valley, faces persistent budget constraints that limit its ability to adequately maintain roads and levees in the community. As a result, maintenance is often deferred and flood control infrastructure relies on incremental repairs rather than comprehensive infrastructure upgrades. The community seeks a clear long-term strategy for maintaining critical public facilities in the face of both flood and drought conditions.

3.1.3 Aquatic and Biological Resources

The community seeks to balance growth with protection of fish and wildlife, shorelines and streambanks, water quality, wetlands, and views. Clustering development to retain larger tracts of undisturbed habitats is a key tool to achieve this goal. In addition, visitor access and behavior should be managed to allow enjoyment of the river and surrounding landscapes without causing erosion, habitat degradation, overfishing, water pollution, or wildlife disturbance. Reducing flood-related pollution and debris, especially from properties located near the river, is another concern.

3.2 Public Services and Utilities

Given the limited utility capacity and the remote setting of Stehekin, several community needs emerge related to maintaining reliable infrastructure while supporting long-term community sustainability. One key need is ensuring reliable and resilient power supply. Because electricity is generated locally by a small hydropower facility with limited capacity, the community will benefit from continued investment in system upgrades, modernization, and maintenance. Efforts such as the Chelan PUD Stehekin Powerhouse Modernization project are important for improving reliability and ensuring the system can meet both current demand and modest future growth. The community would also benefit from exploring energy conservation measures, efficient building practices, and small-scale renewable energy options that reduce strain on the local power system.

The community would also benefit from improvements to water, wastewater, and waste management systems that support long-term public health and environmental protection. Upgrading aging infrastructure, improving water storage or treatment capacity, and ensuring septic systems are

appropriately sited in areas outside of flood-prone zones can help maintain reliable service. Because the Stehekin River floodplain and groundwater conditions can limit where septic systems are feasible, continued evaluation of wastewater solutions may be necessary as housing needs evolve.

Finally, a key community need is maintaining dependable service in a remote location where infrastructure maintenance and supply delivery are inherently challenging. The ability to transport equipment, materials, and waste by boat or barge is essential to maintaining utility systems. Continued coordination between residents, Chelan PUD, the NPS, and other partners will be important to ensure that infrastructure remains reliable while supporting a stable resident population and visitor economy. Thoughtful planning that aligns infrastructure capacity with community needs will help sustain Stehekin as a viable year-round community.

3.2.1.1 Chelan PUD

Chelan PUD is making significant investments in the Stehekin power system, with planned improvements totaling more than $11 million, in addition to ongoing maintenance of existing infrastructure. Together, these efforts will modernize the system and improve reliability; however, they also reinforce the need for continued coordination among Chelan PUD, Chelan County, NPS, and the Stehekin community. Long-term success will depend on balancing energy demand, infrastructure capacity, and community needs to ensure a safe, reliable, and sustainable power system for the future.

Currently, Chelan PUD is working toward reducing peak demand due to Stehekin's limited generation capacity. Chelan PUD works with the community to provide educational and other resources to promote energy conservation. Chelan PUD is reviewing energy usage via AMI data to develop efficiency programs for all customers.

3.2.1.1.1 Stehekin Powerhouse Modernization

Chelan PUD is currently undertaking improvements to modernize the Stehekin Powerhouse. The following summarizes key project phases for the Stehekin Powerhouse Modernization and D2 Replacement projects in support of the Community Plan; timelines are subject to change.

Phase 1 of the Stehekin Powerhouse Modernization focuses on upgrading aging electrical infrastructure and control systems to improve overall safety, reliability, and wildfire resilience. Planned improvements include replacing outdated switchgear, installing modern protective relay systems, and implementing a new control system that enables remote monitoring and automated operation of the hydro and diesel generation systems. These upgrades are intended to strengthen system performance by improving outage response, reducing manual operations, enhancing protection against weather and environmental impacts, and establishes the foundational infrastructure needed to support future energy improvements.

The D2 Replacement project involves upgrading the community's primary backup and grid-forming diesel generator with a new, more efficient system designed to improve overall reliability and performance. The new generator will be equipped with modern controls and monitoring capabilities and will integrate with the upgraded electrical infrastructure implemented in earlier phases of the modernization effort. This replacement will support continued system stability and complement future energy improvements, including integration with battery storage and other renewable energy resources.

Phase 2 of the Stehekin Powerhouse Modernization includes the design and installation of a Battery Energy Storage System (BESS) to support load balancing, improve system stability, and reduce reliance on diesel generation within the isolated microgrid.

Phase 3 of the Stehekin Powerhouse Modernization focuses on improving the reliability and performance of the hydroelectric system by addressing constraints at the headworks. Phase 3 will enhance the system's resilience and operational flexibility under varying conditions while reducing maintenance needs and supporting long-term infrastructure performance.

While these planned improvements will enhance system reliability and provide modest increases in capacity, they are not expected to support significant long-term growth on their own. As a result, additional strategies may be needed to ensure the long-term sustainability of the Stehekin power system. These may include measures such as promoting energy efficiency, encouraging conservation through rate structures, addressing high energy uses through policy, and exploring opportunities for distributed energy generation.

3.3 Housing

Private land ownership in the Stehekin Valley has declined since the establishment of the LCNRA, to the current private land inventory of about 294 acres. The amount of land available for development is further constrained by natural hazards and other limitations. These land limitations, in addition to limited available housing units and limited job opportunities for year-round residents, contribute directly to ongoing housing challenges in the Stehekin community. Residents have identified a lack of housing options necessary to sustain the community both seasonally and year-round. Housing supply is particularly limited for younger residents and lower wage–earning workers who seek to live and work in Stehekin or raise families in the valley. The limited amount of buildable land, combined with flood risk and other development constraints, continues to affect the community's ability to maintain and expand its housing stock. Housing costs are exacerbated by the number of homes that are vacant nearly year-round, using limited land supply and utilities to essentially "store" residences that aren't occupied.

The Stehekin community has identified a clear need to make additional housing available to support both year-round residents and seasonal workers. Housing demand exists for several groups,

including families who live in the valley full time, young people who wish to remain in or return to Stehekin, and seasonal employees who support the tourism-based economy and agricultural practices. In recent years, community members have noted that the limited availability of housing has made it difficult for younger generations and lower wage–earning workers to live and work in the valley or raise families there. Expanding housing opportunities will help sustain the long-term vitality of the community by allowing a broader range of residents to remain in or relocate to Stehekin.

Additional housing is also needed to support critical services that residents rely upon. Key positions such as employees of the Stehekin Post Office and Chelan PUD require stable housing in order to maintain essential community infrastructure. Without adequate housing options, it can be difficult to recruit or retain staff needed to operate these services. Ensuring that housing is available for critical personnel represents an important component of maintaining a functioning and resilient community.

Seasonal housing needs also play a significant role in Stehekin. Tourism is a central component of the local economy, and seasonal workers support lodging, food service, recreation, and other visitor-oriented businesses. Housing options for seasonal employees are currently limited, which can constrain the ability of businesses and organizations to operate at full capacity during peak visitor periods. In addition, the community has identified a potential need for expanded lodging options to accommodate visitors and support tourism-related economic activity. It is beneficial for the economy as well as guests to accommodate overnight visitors, creating a more immersive experience than a day trip.

Meeting these needs will likely require a variety of housing types rather than a single solution. Potential options include shared housing units for seasonal staff, small multi-family structures, ADUs, and single-family homes that can accommodate year-round residents and families. Providing a mix of housing types can help address the needs of different households while making efficient use of the limited buildable land and utilities available in the valley.

In the near term, the community anticipates the need for additional housing within the next 5 years to address immediate workforce and service related needs. Over the longer term, within a 10-year or greater planning horizon, additional housing will likely be necessary to support community stability, accommodate new families, and sustain the workforce that supports tourism and essential services. Planning for both short-term and long-term housing development will help ensure that Stehekin remains a viable place to live, work, and visit.

3.3.1 Residential Vacancy

Vacant and underutilized residences affect the housing available in Stehekin. Housing prices are elevated because of the reduced number of units available for short-term rentals (STRs), longer-term seasonal housing, and permanent year-round residences. Chelan County currently allows one ADU

per lot in rural areas of the County. ADUs can be constructed on lots to increase available housing for family members, accommodate seasonal housing needs, or be used for the long term or STRs.

STRs support tourism in Stehekin and some community members have suggested that year-round residents should be exempt from potential STR caps or similar restrictions in order to support affordability and provide flexibility for local families. This approach would allow residents who live in the community full time to rent portions of their homes or properties while ensuring that restrictions primarily address investment properties or non-resident operators. Other community members expressed the view that STR regulations should be carefully evaluated before adoption. While some residents view STR regulation as a tool to preserve housing availability for year-round residents, others note that Stehekin's limited private land base, existing development constraints, and small housing market may limit the effectiveness of additional regulation. These residents emphasize the importance of allowing property owners flexibility to generate tourism-related income while maintaining housing opportunities for the resident community.

3.4 Economic Sustainability

3.4.1 Property Ownership

The small number of privately owned parcels creates inherent limits on the scale of economic development that can occur within the community.

As a result, economic activity in Stehekin largely occurs within the existing built environment. Businesses tend to be small, locally owned operations that provide lodging, food service, guiding, transportation, and other visitor-oriented services. The limited supply of private land also means that decisions about land use, housing, and development have a direct influence on the community's economic opportunities and long-term sustainability.

Consistent and substantial reduction of the private land base has also limited the amount of land available to support housing, small businesses, and other community resources. This condition creates a planning context in which a fixed or declining supply of private parcels must accommodate housing, local services, and economic activity over time, instead of a more typical planning context that assumes more growth and expansion of developable land to address community needs. As a result, the community has to rely more on making better use of existing properties, sharing space, and maintaining what is already in place, rather than expanding outward. As Stehekin considers its long-term sustainability, it may be appropriate to periodically review the current distribution of public and private lands within the valley to better understand how land ownership patterns influence community viability.

In some cases, parcels that were historically privately owned and later sold or transferred to federal ownership may be located in areas that are relatively suitable for development when compared to

other portions of the valley. Where appropriate and consistent with federal policies, and the purposes of the LCNRA, there may be opportunities to evaluate whether certain parcels could be considered for land exchanges or other cooperative arrangements. Such efforts could potentially return limited areas of suitable land to private ownership in order to support housing, essential services, or small-scale community development, while maintaining the overall goals of resource protection and park stewardship.

Land exchanges between willing landowners and the NPS, or similar mechanisms, could also provide opportunities to consolidate federal ownership in environmentally sensitive or undevelopable areas while allowing for a sustainable private land base that supports the community. Exploring these options may help maintain the longevity of the Stehekin community while continuing to protect the natural landscape that defines the valley.

3.4.2 Economic Opportunities

Maintaining a stable economy in Stehekin requires sustaining opportunities for full-time residents while also supporting the visitor economy that provides much of the community's income. Permanent residents play a central role in operating local businesses, maintaining facilities, providing services, and supporting community institutions. Ensuring that these residents can live and work in the valley requires access to housing, stable employment opportunities, and the infrastructure necessary to operate businesses and essential services.

Several services function as indicators of a viable and functioning community. These "indicator services" include basic retail and food services, transportation connections to Chelan, lodging and

visitor services, emergency and medical response capability, postal services, utility operations including telecommunications, and maintenance of roads and infrastructure. Creating and maintaining these core services requires both a sufficient resident workforce and a stable economic base.

Public sector activity also plays an important role in sustaining Stehekin's economy. Chelan PUD's provision of relatively inexpensive electrical power helps reduce operating costs for households and businesses throughout the County. The NPS maintains roads, trails, and other public facilities and provides garbage and recycling services that support both residents and visitors. While privately owned property is taxed by the County and those taxes help support County-provided public facilities, the presence of the NPS guarantees that those services will always be provided.

At the same time, the community faces a fundamental tension between economic development and preservation of the natural landscape that defines the valley. The wild and scenic character of Stehekin is the primary reason visitors travel to the area and an essential component of the community's identity. Increased development can provide economic opportunities but would need to be in harmony with the area's natural qualities that attract visitors and sustain the local economy. Maintaining this balance is a central challenge for long-term economic planning.

Visitors and seasonal residents also play an important role in supporting the local economy. Spending by visitors supports local businesses, creates employment opportunities, and helps sustain services that may otherwise be difficult to maintain in a small rural community. At the same time, permanent residents provide the labor, capital, knowledge, and stewardship necessary to operate these services and support the visitor experience. Recognizing the interdependence between residents and visitors will remain an important element of the community's economic future.

The long-term economic health of Stehekin depends on maintaining a balance between community vitality and protection of the valley's natural character. Preserving a private land base, supporting full-time working residents, maintaining essential services, and managing development in a way that respects the surrounding landscape can help ensure that Stehekin remains both a thriving community and a place valued for its unique natural setting.

3.4.3 Maintaining Character

Local stewardship plays a central role in maintaining both economic stability and community character. Residents of Stehekin have historically served as diligent stakeholders in their landscape while providing services that support visitors and seasonal residents supporting the local economy through local services and businesses. Planning efforts that empower local residents and recognize their role in maintaining the community can help ensure that economic decisions reflect local knowledge and priorities. Supporting resident operated businesses, maintaining housing opportunities for full-time community members, and enabling residents to participate in planning

and decision-making processes can strengthen both the local economy and the long-term sustainability of the community.

The limited number of privately owned parcels in the valley plays an important role in maintaining this balance. Preserving and protecting these existing parcels helps sustain the historic community of Stehekin and contributes to its permanence and long-term viability. Because the private land base is small and constrained by NPS land acquisition goals and environmental conditions such as floodplains and steep terrain, economic activity is restricted to a small private land base. This limitation can help prevent uncontrolled expansion while encouraging use of existing properties to support housing, small businesses, and essential services.

Additionally, community input emphasized the importance of establishing clear development standards that address building scale, location, and site impacts in order to maintain the visual landscape. Existing development standards already help protect the Stehekin River and other natural resources that are central to the area's ecological health and scenic value. Limiting the scale of development, encouraging site design that reflect the rural character of the community, and ensuring compliance with environmental protections can help maintain the wild character of the valley while allowing residents to sustain viable businesses and services.

Ultimately, economic stability in Stehekin may best be achieved through a model that prioritizes small-scale, locally supported economic activity. This model would preserve the limited private land base, maintain development within an appropriate scale, and align community planning with the policies and protections established for the LCNRA.

3.5 Transportation

Stehekin's transportation system reflects the community's remote location and limited access. The community is not connected to the regional road network and can only be reached by passenger ferry or private boat via Lake Chelan, by small aircraft using the Stehekin airstrip, or by trail through the surrounding North Cascades wilderness. As a result, the movement of people, goods, and services relies heavily on water transportation and a small internal road system within the valley. The Stehekin Landing area functions as the primary transportation hub, where passengers, freight, and visitors transition from lake travel to other modes of transportation within the valley. Parking, visitor orientation, and transportation management at the landing are important considerations due to the concentration of activity during peak visitor periods.

Within the valley, transportation occurs primarily along a small network of local roads that connect the landing with residential areas, community services, and recreational destinations. Many residents own vehicles that were barged to the valley for personal or commercial use. Stehekin Valley Road and Company Creek Road forms the backbone of this system, extending north and west through the lower valley and into the Upper Stehekin Valley. The road serves both residents and visitors,

providing access to homes, businesses, trailheads, campgrounds, and other destinations. Because the road network is limited and shared by multiple users, seasonal increases in visitor traffic can contribute to congestion and create safety considerations along portions of the corridor.

Non-motorized transportation also plays an important role in the community. Walking and bicycling are common for travel between the landing, nearby services, and residential areas, and they contribute to the small-scale character of the valley. However, the limited width of valley roads and the mix of vehicles, bicycles, and pedestrians can create safety challenges in some areas. In the Upper Valley, portions of Stehekin Valley Road have also been affected by flooding and channel migration of the Stehekin River, which can influence long-term access and maintenance needs. Together, these factors highlight the importance of managing transportation in a way that supports community mobility while maintaining the natural and rural character of Stehekin.

3.5.1 Upper Valley Road

Transportation access in the Upper Stehekin Valley remains an important and sometimes debated topic within the community. The historic 22.8-mile road to Cottonwood Camp washed out at mile 12.9 in 2003, reducing the road length by nearly 10 miles. Portions of the Upper Valley Road have been damaged or lost due to flooding and channel migration of the Stehekin River, limiting vehicle access to some areas farther up valley. Community members have expressed varying perspectives regarding whether efforts should continue to encourage the NPS to rebuild an Upper Valley Road.

Some community members indicate support for continued evaluation of options to restore Upper Valley Road access, citing benefits such as improved access to trailheads, recreation areas, historic sites, and greater accessibility for visitors with limited mobility. Other community members oppose rebuilding a road, raising concerns regarding the financial, environmental, and long-term feasibility challenges associated with reconstructing and properly maintaining a road in the dynamic floodplain of the Stehekin River.

Restoring vehicle access would require a new road alignment, most likely on the Pacific Crest Trail (PCT) alignment, displacing the PCT, which currently provides a source of visitors and economic activity in Stehekin. Notably, in a 2009 assessment, NPS found no difference in the number of visitors to the Upper Stehekin Valley before and after the road was washed out. However, plans to rebuild the road remain a salient topic as the only current access to the Upper Stehekin Valley is by foot.

Decision-making regarding the Upper Valley Road is within the NPS jurisdiction and extends beyond the scope of the Stehekin Community Plan. Before the LCNRA establishment, Chelan County played a role in the ownership and management of the road corridor, and its policies and decisions may influence future actions related to road access. Because this Plan primarily provides community guidance rather than direct regulatory authority, the Plan may acknowledge the range of community

perspectives while recognizing that final decisions regarding the Upper Valley Road may be determined through other processes involving the NPS, and other relevant agencies.

3.5.2 Stehekin Landing

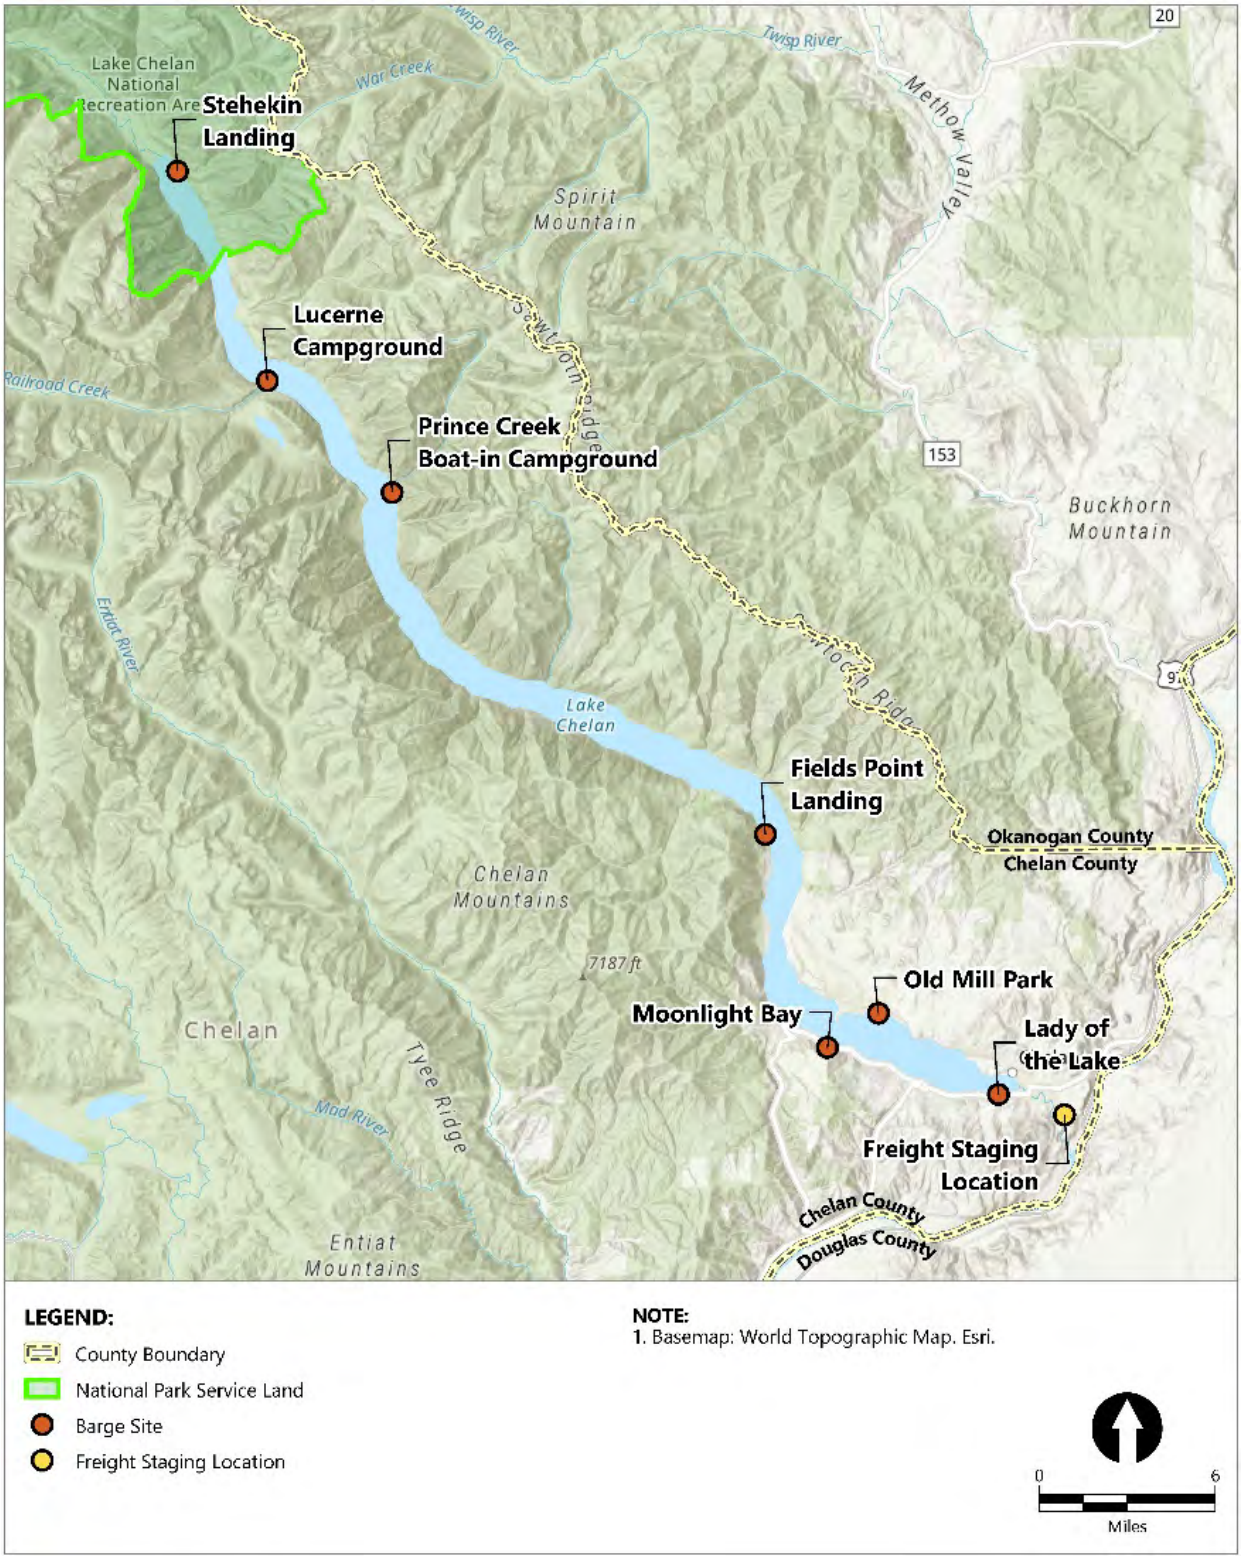
The Stehekin Landing area functions as the primary transportation hub for the community and experiences concentrated activity when passenger boats arrive and depart. During these periods, increased vehicle, bicycle, and pedestrian activity can create congestion and circulation challenges. Community members have identified the need to improve traffic flow and overall circulation within the landing area to enhance safety and efficiency for both residents and visitors. Potential considerations include establishing one-way traffic patterns in certain locations, such as the road behind the Golden West Visitor Center, or implementing temporary one-way circulation patterns during boat arrival and departure times. These measures may help reduce conflicts between vehicles, bicycles, and pedestrians while improving the overall movement of people through the area.

Non-motorized transportation and access to the waterfront are also important considerations. Walking and bicycling are common modes of travel near the landing, particularly for visitors arriving by boat who move between docks, businesses, and nearby facilities. Improving conditions for pedestrians and cyclists, including clearer circulation routes and safer shared spaces, may help reduce congestion and improve the overall visitor and community experience. Maintaining convenient and safe access to the waterfront is also important, as this area serves as the primary point of arrival and gathering space within the community.

Parking management has also been identified as a key need in the landing area. Community members have noted the loss of long-term parking options due to the wastewater treatment plant and the increasing demand for parking during peak visitor periods. Potential strategies may include identifying areas for short-term, mid-term, and long-term parking; improving parking organization through measures such as diagonal parking; and reducing informal roadside parking that can contribute to congestion and safety concerns. Clear parking regulations and consistent enforcement may also help ensure that available parking is used efficiently and supports both residents and visitors.

3.5.3 Boat and Barge Operations

Boat and barge transportation is essential to the sustainability of the Stehekin community. Because Stehekin is not connected to the regional road system, nearly all goods, materials, equipment, and many services must arrive by water via Lake Chelan. Barges support the needs of full-time residents, part time residents, property owners, seasonal workers, local businesses, Chelan PUD, and NPS operations. Construction materials, fuel, equipment, emergency services, and other essential supplies rely on barge access, making this service a critical component of maintaining homes, businesses, infrastructure, and community services. Barge service is a critical part of the Lake Chelan transportation system, supporting the movement of freight, equipment, fuel, construction materials,



and other goods between down-lake facilities and Stehekin. Mountain Barge Services has provided for Lake Chelan-wide barge needs since 1976, including standard freight barge runs, bulk material barge hauling, marine construction, shoreline work, and dock construction.

Maintaining reliable passenger boat and barge service is therefore fundamental to the long-term viability of Stehekin. Public Law 90-544 and associated House and Senate reports recognized the importance of the Stehekin community and the role it plays in providing visitor services within the LCNRA. Consistent water-based transportation ensures that residents, workers, and visitors can access the community while allowing goods and supplies to reach the valley. Continued support for these transportation services is necessary to sustain both the local economy and the community's ability to serve visitors to the area.

Existing County zoning definitions may not clearly distinguish between marine freight operations, shipping terminals, and water-dependent uses. This lack of clarity creates uncertainty about where barge facilities may be allowed and whether industrial zoning would be required at Stehekin Landing, in the City of Chelan, Lucerne or at other down-lake sites, and may affect the relocation, continuation, or expansion of barge service facilities over time. Because barge service is essential to access and supply movement in Stehekin, Chelan County should review and clarify zoning definitions related to shipping terminals, marine freight facilities, and water-dependent uses to support future land-use decisions. Unclear zoning definitions may constrain barge service that is necessary for the Lake Chelan transportation system, including service to Stehekin. The County should support regulations that allow barge-related operations in appropriate shoreline and transportation-serving locations without automatically treating them as industrial uses where the activity is primarily marine access and short-term freight transfer. Policy direction should address both Stehekin Landing and other sites as part of a coordinated Lake Chelan-wide transportation strategy. Figure 3.6 maps the down-lake locations in Stehekin that have the potential to accommodate barge service.

Figure 3.5.3
Existing Barge Service Locations

3.6 Parks and Recreation

Stehekin and surrounding lands serve as an important component of the North Cascades National Park Service Complex. Recreation is central to the community's identity and economy, with visitors drawn to the valley for its access to wilderness, scenic landscapes, and outdoor activities. The Stehekin Valley provides opportunities for hiking, camping, boating, wildlife viewing, bicycling, hunting, and recreational angling. Most of these activities occur on lands managed by the NPS, USFS, and other public agencies, while the Stehekin community provides services that support visitor access to these experiences.

Recreational opportunities and visitor services continue to evolve as conditions in the valley change. The recent closure of the Golden West Visitor Center has affected how visitors receive information and orient themselves upon arrival in Stehekin. At the same time, there is ongoing interest in expanding visitor accommodations and recreational opportunities that allow people to experience the valley while maintaining its natural character. Activities such as hunting and recreational angling remain important traditions for residents and visitors and contribute to the area's cultural and recreational heritage. Balancing visitor access with the protection of natural resources and the character of the Stehekin community remains an important consideration for parks and recreation planning in the valley.

The 2022 Stehekin Opportunities Matrix noted the following needs and desires for parks and recreation, largely dependent on NPS presence in the valley, noting that Stehekin's visitor services and recreation opportunities are central to both the visitor experience and the character of the community.

- As services formerly provided at the Golden West Visitor Center have evolved, there is an opportunity to improve how visitors receive clear information about recreation, safety, transportation, fire awareness, and stewardship. Visitor accommodations should support access while preserving Stehekin's small-scale, rural character, remaining compatible with the natural landscape and community identity. Expanding winter access and recreation can enhance year-round opportunities, provided these efforts align with environmental protection and community values.
- Reliable access to trails, campgrounds, and recreation areas is essential for both visitors and residents. Maintaining and restoring infrastructure, including damaged trails, and strengthening transportation connections will help sustain access while reducing impacts on heavily used areas. Traditional activities such as angling and hunting should continue where appropriate, recognizing their importance to local heritage. Thoughtful, adaptive management—supported by scientific studies such as fish habitat assessments and creel surveys—can help sustain these uses while protecting ecological health.
- Protecting natural resources must guide all recreation planning in the valley. Management should safeguard the Stehekin River, surrounding wilderness, wildlife habitat, and scenic

landscapes while ensuring increased visitation does not degrade environmental conditions or the visitor experience. Preserving Stehekin's quiet, remote character requires avoiding large-scale infrastructure and emphasizing low-impact, non-motorized recreation. Stewardship and education, including promoting Leave No Trace principles and strengthening partnerships between residents, visitors, and the NPS, will help ensure recreation continues to support the local economy while maintaining the valley's unique character for future generations.

In the early stages of development of a Stehekin Community Plan, stakeholders and prior planning efforts were consulted in 2022 about potential projects and improvements in the Valley. That work resulted in a list of potential capital improvements, including:

- Reopening roads and paths that support bicycles, personal vehicles, and shuttle service
- Rerouting Upper Stehekin Valley Road to Wagon Road to address loss of access due to road closures
- Developing a new PCT alignment
- Providing infrastructure, funding, and maintenance of visitor support services, including search and rescue services
- Scoping new locations for medium- and long-term parking
- Removing existing parking away from the side of the road
- Developing a Lower Stehekin Valley "frontage" Trail/Bike Path to relieve congestion on the Lower Stehekin Valley Road
- Opening or improving Lower Valley Loop Hikes, including hiking from Purple Point to Rainbow Loop or behind Buehler's Bluff and Rainbow Loop to the Ranch
- Constructing either a pedestrian suspension bridge or a protected climbing/traversing route to allow hikers to cross the river at the location where the U.S. Geological Survey cableway currently exists
- Establishing a new right-of-way (ROW) for power supply along Company Creek Road
- Improving winter recreational opportunities by providing yurts and additional cabins at Bridge Creek
- Constructing shoreline access points, including shoreline regrading, installation of sand or fine gravel beach materials, accessible lake-entry features, and related site infrastructure to improve public swimming access and recreational use

4 National Park Service and the Stehekin Valley

The relationship between the NPS and the Stehekin Valley was established in the LCNRA Enabling Legislation (Public Law 90-544), enacted by congress in 1968. This legislation recognized the LCNRA as distinct from the NOCA and created the North Cascades National Park Service Complex. This distinction designated the LCNRA as an area where recreation, access, and the historic Stehekin community could continue to coexist with resource protection and to balance national conservation goals with the continued existence and function of the Stehekin Valley. Section 202 of Public Law 90-544 states that the LCNRA was established "[i]n order to provide for the public outdoor recreation use and enjoyment of portions of the Stehekin River and Lake Chelan, together with the surrounding lands, and for the conservation of the scenic, scientific, historic, and other values contributing to public enjoyment of such lands and waters." The Public Law placed federal lands in the Stehekin Valley (within the LCNRA), and the NOCA, within the management jurisdiction of the NPS to be administered in a manner that includes environmental, visitor service, and community concerns.

Since the establishment of the LCNRA, there have been different interpretations of what the Public Law intended regarding the compatibility of preservation, conservation, and the public enjoyment. The authority and jurisdiction that NPS has over the valley has also been subject to different

interpretations. Over time, agencies have pursued efforts to clarify the intent of the original legislation, including:

- In 1981, a report was issued by the U.S. Government Accountability Office examining the land acquisition practices of the NPS at LCNRA. The report concluded that the congressional intent was that a private community in the recreational area should continue to exist, that commercial development should not be eliminated, and that additional compatible development should be permitted to accommodate increased visitor use.
- In 1981 and 1982, the NPS issued an Environmental Assessment (EA) and Finding of No Significant Impact (FONSI), respectively, evaluating compatibility standards for the Stehekin Valley. The standards were developed to guide NPS management decisions regarding compatible private land uses within the LCNRA while protecting natural and cultural resources, recreational opportunities, and the continued residential growth and development of the Stehekin community.

Following disputes over land acquisition and compatibility standards during the 1970s and early 1980s, the ***Lake Chelan National Recreation Area Land Protection Plan*** **(1988)** established a framework for protecting recreation area resources while preserving the Stehekin community. The plan emphasized voluntary land acquisition, continued private ownership, and reliance on Chelan County land-use regulation, reinforcing the NPS's primary role as manager of federal lands rather than regulator of private property. Consistent with this framework, NPS currently exercises management jurisdiction over federally owned lands within the Stehekin Valley that are part of the LCNRA, while private lands remain subject primarily to state and local jurisdiction. Although NPS has no general land-use or zoning authority over private parcels in Stehekin, it may exercise regulatory authority where federal permits, property interests, access rights, or resource protection requirements are involved.

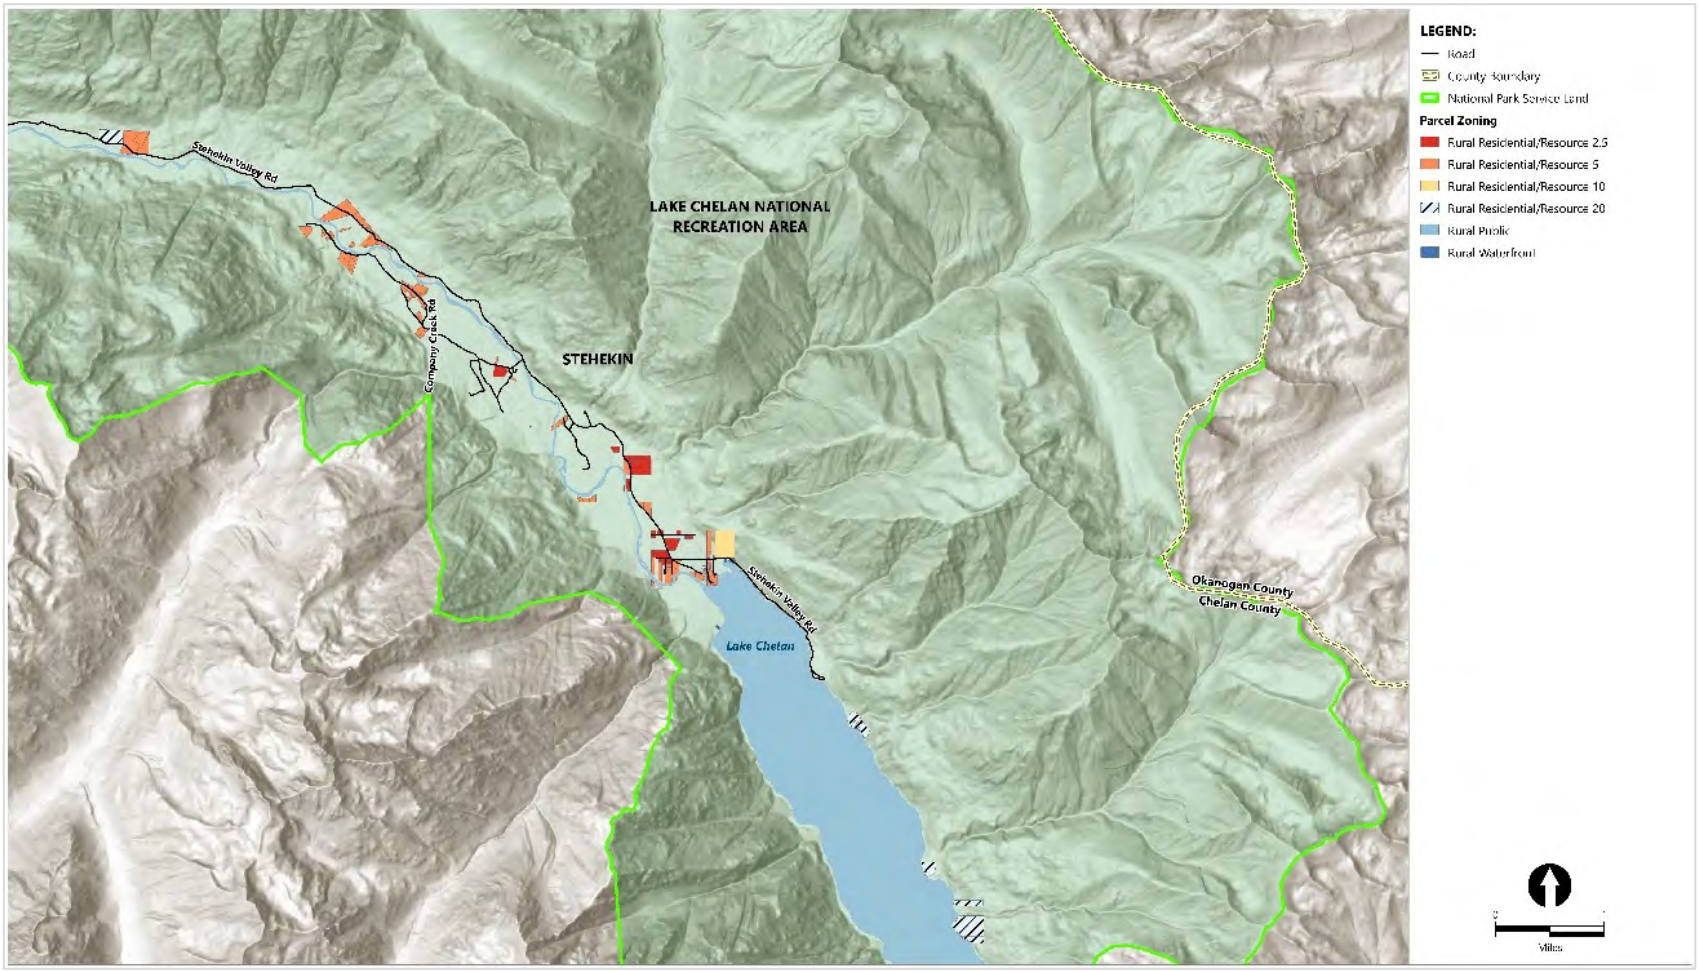
The ***North Cascades General Management Plan*** **(GMP 1995)** builds on the Public Law 90-544 (1968) and the management framework for the LCNRA and NOCA. The plan emphasizes the role of the NPS in establishing limits on development and resource use to avoid significant adverse effects on the scenic, scientific, historic, and recreational values of the LCNRA. The General Management Plan further outlines specific policies in the following resource-specific implementation plans:

a. Sand, Rock, and Gravel Plan
b. Forest Fuel Reduction/Firewood Management Plan
c. Wilderness Management Plan
d. Transportation Plan
e. Stehekin Landing and Valley Development Concept Plans
f. LPP (Updated in 2012)

Together, the implementation plans established the framework through which the General Management Plan would be carried out in the Stehekin Valley. While some plans focus on the stewardship of wilderness, natural resources, and ecological processes, others address transportation, infrastructure, visitor services, and land use. This combination of resource stewardship and community planning established many of the management practices and development patterns that continue to guide modern-day decision-making in the Stehekin Valley. NPS policies and the General Management Plan recognize the importance of balancing national conservation goals with the continued existence and function of the Stehekin community. These policies emphasize that development, land use, and infrastructure should remain modest in scale and compatible with the valley's natural setting, visual character, and environmental constraints, while still supporting local livelihoods.

Within this framework, the community's ongoing role is integral to management and planning processes, contributing stewardship, local knowledge, visitor services, and a sustained year-round residential presence.

After the creation of the park complex, there was an increase in visitation and resource demands and increase in the number of private residences and population. Since the 1980s, the NPS's role in Stehekin has gradually shifted from active involvement in both private land policy and visitor services toward a more limited focus on managing federal lands and maintaining essential infrastructure. Over time, this transition has been marked by reduced staffing levels, diminished interpretive programming, reliance on remote visitor services, and the closure of the Golden West Visitor Center in 2024. By 2024, NPS reported a 28% decline in overall staffing across the North Cascades Complex over the preceding decade and cited funding challenges as reasons for reducing its on-the-ground presence in Stehekin.



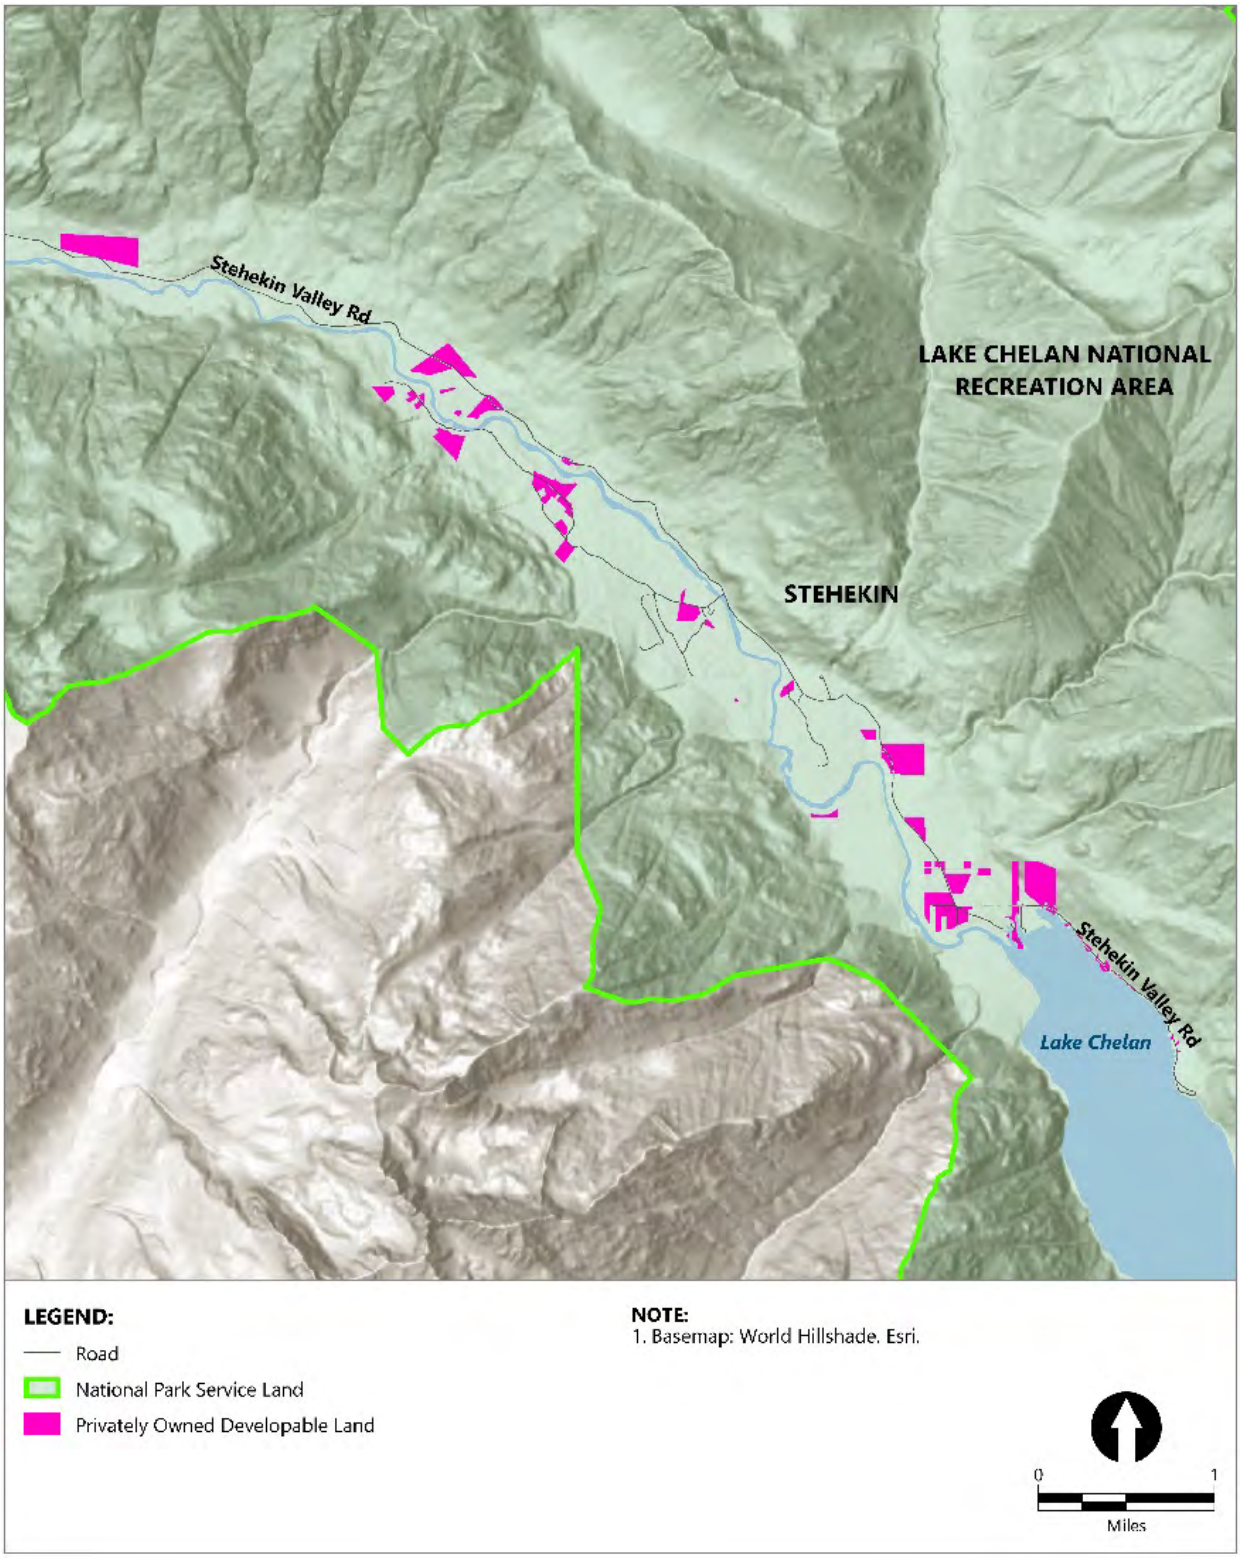
The community, and Chelan County as a whole, recognizes the important role that the NPS has played in maintaining the viability of Stehekin. Residents and other stakeholders, albeit at varying extents, all expressed a desire for the NPS to return staffing and amenities to pre-2024 levels to the extent practicable.

5 Land Use and Zoning Strategy

5.1 Existing Land Use and Zoning

Parcel ownership in Stehekin currently includes approximately 294 acres of privately owned parcels. Nearly all of the privately owned parcels are currently zoned as RR, ranging from RR2.5 to RR20, with a few parcels zoned RW and two parcels embedded in the RP zoning. Figure 5.1-A provides a zoning overview of privately owned property in the valley.

Figure 5.1-A
Privately Owned Parcel Zoning



In the "developed" areas of the valley, most non-private parcels are federally owned. This includes approximately 68 acres of RP-zoned land near Stehekin Landing and the Golden West Visitor Center, about 95 acres of RR20- and RR5-zoned property along Company Creek Road, and a patchwork of other parcels throughout the valley. The NPS also owns all but two of the RP parcels and all but one of the RW parcels near Stehekin Landing, with the seasonal barge dock privately owned and the ferry landing owned by Chelan PUD. Some of the publicly owned property is likely difficult to develop due to critical areas constraints; however, several of the large parcels owned by the NPS do have the potential for developable sites outside of mapped steep slopes, floodways, or landslide hazard areas. Should NPS decide to make that property available, there could be increased development potential, especially along Stehekin Valley Road.

Figure 5.1-B shows an approximation of developable parcels in the valley. All property in the valley was reviewed, and areas in steep slopes (>40%), mapped landslides, wetlands, and shoreline buffers were excluded. Then property was divided into privately owned acreage and publicly owned acreage. This resulted in approximately 275 acres of privately owned property that is appropriate for development. This does not account for parcels that are already developed, potentially reducing future development potential, or do not have road access (or where road access is cut off by intervening natural features).

Zoning regulations in the Chelan County Code address both the use of the property (e.g., residential, commercial, institutional) and how that property is developed (e.g., building size, setbacks, lot coverage). Additional regulations apply within 200 feet of the Stehekin River and the tributaries Agnes, Company, Rainbow, and Boulder Creeks, as they are regulated under Chelan County's Shoreline Master Program. The community has expressed interest in reviewing the applicable use and development standards, with the potential of changing the zoning in the valley to help achieve community priorities. This might include application of different RR standards to some or all of the properties, and it might include applying Rural Recreational/Residential (RRR) or Rural Village (RV) zoning to some or all of the properties. In the shoreline or other identified critical areas, development will still be limited by environmental factors and the ability to provide utility services, including septic.

Note: The following sections about zoning do not extensively consider critical areas. It is assumed that any new development would take place consistent with both shoreline and critical areas regulations, regardless of how and when a parcel was created or the improvements constructed. In addition, restrictive covenants may result in fewer developable parcels.

Figure 5.1-B
Developable Parcels

5.1.1 Zoning Districts – Permitted Uses

While the existing zoning districts differ in some respects, they are largely consistent in the types of uses they permit. In general, the RR20 zoning allows for fewer uses than the other RR districts. For example, isolated cottage industries, planned developments, recreational vehicle parks, and mobile home parks are not allowed in this district. On the other end of the zoning continuum, larger agricultural uses (e.g., processing facilities, forestry operations) are not allowed in RR2.5.

The RRR and the RV zoning districts allow a few more activities outright or through conditional use permits, with the RRR allowing more recreation and tourist-serving uses and the RV allowing more "town" type uses, including multi-family residential. However, it should be noted that all zones allow small-scale recreation and tourism uses with a conditional use permit (CUP). The Chelan County Code, Section 14.98.1795, defines recreational uses:

> "Small scale recreation and tourism" means a land use that relies on a setting to provide recreational or tourist use, including recreational center and commercial facilities to serve those uses, but that does not include new residential development. It includes activities and facilities such as, but not limited to, cultural/religious camps, retreat centers, campgrounds, [recreational vehicle] parks, lodges and cabin rentals, camping units, outdoor equipment rentals, guide services, trails and trailhead facilities, and similar uses. Small scale recreational and tourist uses are of a size or intensity which has minimal impacts on the surrounding area and which makes minimal demands on the existing infrastructure and public service.

The conditional use criteria for recreation and tourism uses are established in Section 11.93.370 of the Chelan County Code. In summary, the code limits buildings to 6,500 square feet per 10 acres of land and requires an applicant to demonstrate both that the use will be compatible with its surroundings and that all public services will be provided to the use.

The full table of allowed uses is in Section 11.04 of the Chelan County Code.

5.1.2 Development Standards and Constraints

Table 5.1.2 shows a summary of development standards in the zoning districts. Other than minimum parcel size and the minimum parcel width, the development standards for all rural zoning districts are nearly identical.

Table 5.1.2.1
Zoning Requirements Summary

Zone	Min. Parcel Size	Min. Parcel Width	Max. Bld. Height	Coverage %	Front Yard	Rear Yard	Side Yard
RR20	20 acres*	200	35	35	25	20	5
RR10	10 acres*	150	35	35	25	20	5
RR5	5 acres*	100	35	35	25	20	5
RR2.5	2.5 acres*	100	35	35	25	20	5
RW, RRR, RV	12,000 square feet**	70	35***	35	25	20	5

*Includes 1/2 of adjacent public ROW **or minimum for septic ***RV allows 45-foot buildings

Except for the RV, all zones allow for a "lot split," in which a parcel that cannot be legally subdivided may be split into two parcels. These zones also allow clustered development at the same base density, with some bonuses available in RR5, RR10, and RR20. A simple example would be that a 100-acre parcel in the RR10 could be divided into one 90-acre open space parcel and ten 1-acre developable parcels, as long as the development could meet all other standards for septic, access, and other requirements. The regulations for clustered subdivisions are located in the Chelan County Code, Section 12.12.

Of the privately owned property that is zoned RR, most of the parcels do not meet the minimum parcel size for the zone in which they are located. None of the parcels are part of a clustered subdivision.

Table 5.1.2.2
Summary of Properties by Zone

Zone	No. of Parcels	Total Acres	Average Parcel	No. of Undersized Parcels	% Undersized
RR20	3	22.4	5.6	3	75%
RR10	1	27.37	27.4	0	0%
RR5	120	180.75	1.51	111	93%
RR2.5	30	60.39	2	24	80%
RW	12	2.97	0.25	0	0
RP	2	0.24	0.12	0	0

Since 2011, six new parcels have been created in the Stehekin area. These included three parcels created through exemptions from the subdivision code based on various factors and one three-lot short plat that was submitted in 2014 and recorded in 2016. The 2016 short plat appears to be the most recent subdivision approved in the Stehekin Valley.

About 117 parcels (69% of privately owned parcels), containing about 134 acres (about 46% of total private land area), are at least partially within the 100-year floodplain of the Stehekin River; of those, approximately 70 of the parcels have a dwelling unit on the site. While development is allowed in the 100-year floodplain (as long as it meets elevation and other pass-through requirements), all of these parcels are at least partially within the buffers of rivers or streams (150–200 feet), where development is subject to critical areas requirements.

This combination of large minimum lot sizes with environmental constraints further limits the potential for locating residential structures in Stehekin.

5.1.3 Zoning Issues

Community conversations have identified additional concerns with the zoning that has been applied in the Stehekin Valley. First, prior subdivisions and development patterns have resulted in the majority of residential lots being smaller than required per the zoning code. While this may be more of a perceived constraint than an effective constraint (the zoning code is permissive when addressing nonconforming residential lots), it does show that the County zoning and planning scheme does not reflect the built reality of Stehekin. For any new development to be compatible with (i.e., like) existing development, it should be allowed on smaller individual lots.

Other zoning and development constraints, such as large minimum lot sizes, interact with critical area regulations to further limit development flexibility. While these constraints cannot be removed because they are natural assets that are protected, changing zoning can provide more flexibility in working with the natural environment in developing new houses or relocating houses located in hazardous areas.

5.2 Zoning Options

This section provides information on some of the ways zoning might be changed in the Stehekin Valley in order to remove some of the barriers to additional housing construction. Zoning modifications are included here to address both the difficulty in supplying new housing as well as the options to relocate housing away from hazardous areas. While zoning changes wouldn't compel additional development, they can be used to ease restrictions, particularly when it comes to minimum parcel sizes.

5.2.1 Option: Update Zoning to Reflect Current Conditions

Under this option, the zoning would be updated to more closely reflect current conditions for the existing parcels, using the available zoning districts in the Rural Element of the Comprehensive Plan. In general, this would involve applying the RR2.5 district to most of the private property in the Stehekin Valley. (Only 14 of the privately owned properties are more than 2.5 acres.) Zoning could be applied

consistently in each residential area, which may provide for some additional subdivision opportunities for those larger lots, and, on the larger parcels, the potential for clustered development.

The uses and basic development standards are generally the same, other than minimum lot size, so this option would not result in more conforming uses in the valley, but it may result in more conforming parcels. Additional development would be possible; however, there may be real or perceived conflicts in "upzoning" parcels that are in critical areas or their buffers. Overall density may not increase, as a substantial percentage of the parcels (especially the developed parcels) are smaller than 2.5 acres.

5.2.2 Option: Rural Recreational/Residential (RRR) Zoning

A second option is to apply RRR zoning to all or part of the properties in the Stehekin Valley. In order to be compliant with the Comprehensive Plan land-use designations and associated zoning, part of Stehekin would have to be designated a Local Area of More Intensive Rural Development (LAMIRD) in the County's Comprehensive Plan. (Note that "intense" or "intensely developed" imply residential development that precludes use of land for agricultural or resource purposes—it does not mean levels of density that might be found in a town or city.) LAMIRDS in Chelan County include Malaga and Monitor. As of publication of this plan, Malaga is being considered for conversion to an Urban Growth Area, which would apply higher density zoning and opportunity for the County to provide urban services, such as sewer.

The regulations and process for designating a LAMIRD are in the Growth Management Act, Revised Code of Washington (RCW) 36.70A.070(5) under the Rural Element section. The rules are set out in WAC 365-196-425, and the Chelan County policies for designation are in Chapter 3 of the Comprehensive Plan. In short, LAMIRDs are to be defined by the boundaries of existing development

and to allow infill development within those boundaries. LAMIRDs may not be created to allow entirely new developed areas or increase sprawl.

The RRR zoning purpose statement is set forth in Section 11.06.010 of the Chelan County Code and reads as follows (emphasis added):

> (A) Purpose. This designation will provide the opportunity for the development, redevelopment and infill of **existing intensely developed rural recreational/residential areas for residential, recreational and tourist development consistent with the rural character and rural development provisions outlined in the goals and policies of the Comprehensive Plan**. These areas provide a distinct rural lifestyle closely associated with the many natural amenities found within Chelan County. Potential impacts to the surrounding area, critical areas, and water quality shall be addressed. These areas must be clearly identifiable as existing intensely developed rural recreational development; where a logical boundary can be delineated and set by the built environment. Such a boundary shall not permit or encourage a new pattern of sprawling low density or urban type development.
>
> (B) Uses appropriate for these areas include: open space and developed open space; residential; agriculture; and forestry. Additional uses may be considered with supplemental provisions. These provisions shall address performance standards, impacts to the surrounding area, and be consistent with the goals and policies of the Comprehensive Plan. Such uses may include: **intensification of existing development or new development of small-scale recreational or tourist uses**, including commercial facilities to serve those recreational or tourist uses, that rely on a rural location or setting but that do not include a new residential component; intensification of development on lots containing existing isolated nonresidential uses; home occupations; bed and breakfasts; and community facilities.

Within that framework, lot sizes may be as small as 12,000 square feet as long as septic can be provided and as long as all critical areas can be avoided; cluster subdivisions are not allowed (no lot reduction beyond 12,000 square feet is available). With this parcel limit and RRR applied over all private property in the valley, about 90 properties or over 250 acres would be eligible for subdivision. On parcels that are partially constrained by critical areas, RRR zoning may provide greater flexibility for subdivision or development by allowing the remaining buildable area to be utilized more efficiently.

5.2.3 Option: Rural Village Zoning (RV)

A third option is to apply RV zoning to all or part of the properties in the Stehekin Valley. As with the RRR designation, Stehekin would have to be designated a LAMIRD before this zoning could be applied.

The RV zoning purpose statement is set forth in Section 11.06.020 of the Chelan County Code and reads as follows (emphasis added):

> (A) Purpose. This designation recognizes the existence of **intensely developed rural residential developments and communities, with densities less than two and one-half acres per dwelling unit, which typically will not have sewer service**. This designation will provide the opportunity for the development, redevelopment and infill of existing intensely developed rural residential areas for residential and other rural development consistent with the rural character and rural development provisions outlined in the goals and policies of the Comprehensive Plan. Potential impacts to the surrounding area, critical areas, and water quality shall be addressed. These areas must be clearly identifiable as existing intensely developed rural residential development; where a logical boundary can be delineated and set by the built environment. Such a boundary shall not permit or encourage a new pattern of sprawling low density or urban type development.
>
> (B) Uses appropriate for these areas include: developed open space; residential; agriculture; and forestry. Additional uses may be considered with supplemental provisions. These provisions shall address performance standards, impacts to the surrounding area, and be consistent with the goals and policies of the Comprehensive Plan. Such uses may include: **intensification of existing small-scale recreational or tourist uses that rely on a rural location or setting but that do not include a new residential component**; intensification of development on lots containing existing isolated nonresidential uses; home occupations; bed and breakfasts; and community facilities.

As with RRR zoning, the RV district allows lot sizes as small as 12,000 square feet, or to whatever limit is supported by on-site sewer. However, the intent of the RV is to allow for commercial infill and growth and not to support additional residential development. RV may be appropriate for areas

around Stehekin Landing[2], or if the community decides to have a "center," but otherwise does not encourage residential growth.

In either case, the RRR or RV zoning would require that Chelan County designate that part of Stehekin proposed to be RRR or RV as a LAMIRD. The goals and policies for LAMIRDs are contained in the Comprehensive Plan's Rural Element. The goal for LAMIRDs is to recognize areas of residential or commercial activity that (generally) existed before 1990, to allow for uses to serve the existing and projected rural population (including tourist uses), and to draw logical boundaries around the more intensive development. Because development in Stehekin occurs in several distinct clusters rather than in a single continuous settlement pattern, additional analysis would be needed to determine the appropriate extent and configuration of any LAMIRD designation. As a result, application of a single zoning district across all private lands may not be appropriate, and a combination of zoning approaches may ultimately be warranted based on current or anticipated future land uses.

5.3 Overlays and Tools

Zoning districts, with their associated use and development standards, apply to the entire County, and no one zoning district may meet all of the desires or respond to the concerns of the community. Zoning overlays are a tool that can help customize a zoning district to a unique community, without creating an entirely new zoning designation. Overlays should be used sparingly and should be focused on one or two key issues. They can be added to any zoning district (or community-wide) and generally add restrictions to the applied zoning district; an example in Chelan County is the Icicle Valley Design Review Overlay. For Stehekin, the County might consider the following enhancements to the zoning code. If the RRR or RV districts are applied to Stehekin, overlays could also be considered to more fully align the County-wide zoning with Stehekin's desires. Some examples include:

- **Landscaping and screening standards.** In general, landscaping requirements do not apply to residential uses in the rural areas. Stehekin could consider street-side screening and landscaping to reduce the visibility of residential development, including accessory development like parking areas or garage structures. This would assist in the overall community goal of retaining a natural feel.
- **Prohibition on lot splitting.** Icicle Valley does not allow lot splitting. The County could make similar findings in Stehekin given the amount of land with critical areas and given the limited public services available in the valley. In this case, if a parcel was not configured to allow subdivision, no additional residential parcels could be created.
- **Maximum building footprint.** All districts allow 35% lot coverage and, given the large size of lots in Stehekin, that can result in some very large buildings. An overlay could limit maximum

[2] This area is currently zoned RP, which does not permit residential uses and is based on public ownership of the land. Otherwise the zoning uses and development standards are similar to the RV district, except taller buildings are allowed.

building footprint or overall square footage. This would support more open space on any given lot, supporting the community's goals for incorporating nature into design.

- **Restricting recreational vehicles.** An overlay could state that recreational vehicle parking is limited to public campgrounds, or one recreational vehicle per parcel associated with a residential dwelling, or some measure in between, to address community concerns about informal campgrounds in the Stehekin Valley.
- **Limiting driveways.** One of the visual indicators of residential density is the number of driveways accessing a public roadway. An overlay could prohibit new driveways or require shared driveways for a certain number of houses. Likewise, an overlay could limit the number of new public or private streets, or require pedestrian pathways rather than streets within clustered development.
- **Limits on commercial development.** An overlay could provide additional limits on commercial development that is otherwise allowed or conditionally permitted in the zoning districts. For example, guest houses could be limited to four rooms only, to be confirmed during the permitting process. Tourist-serving restaurants could be limited to 3,000 square feet instead of 5,000, or parking reduced.

Overlay options will depend on the zoning applied to Stehekin but can be useful if there are one or two provisions that would make a zoning district desirable for the community.

5.4 Recommended Approach

Given the community needs and desires for more flexibility in housing provisions, coupled with the desire to provide a minimal amount of more business opportunities and the requirement to protect critical areas, the following recommendations are included as goals and policies in this Plan.

- **Rezone the Landing from Rural Public to Rural Village.** This allows continued economic activity in the vicinity of the landing without requiring public ownership. The NPS can continue to own and operate the businesses, but they are not restricted to the NPS. The RV zoning would allow for moderate redevelopment and a small amount of increased activity in the area.
- **Rezone the area from the head of the lake to the Stehekin School from the current RR districts to RRR – Rural Residential/Recreational.** This would allow for smaller lots on the developable land in this area, creating potential for infill development and fostering the sense of a full community at the head of the lake.
- **Rezone the remainder of the private property in the valley to RR2.5.** This is the smallest lot size allowed in the rural zoning designations and still allows cluster subdivisions. This means that larger parcels could cluster housing on the developable portions of their land.

DRAFT

6 Summary of Issues and Community Needs

Table 6.1 lists the existing conditions, key issues, and community needs as identified by the Stehekin community and described in detail in Sections 2 through 5 of this Community Plan and informs the proposed goals and policies outlined in the following section.

Table 6.1
Summary of Issues and Community Needs

Current Conditions	Key Issues	Community Needs
Fire/Forest Health		
• Forest fuel loads have increased due to fire suppression and insect/disease infestations. • Summer fire seasons are becoming longer, with more frequent and intense wildfires; the situation is expected to worsen with changing environmental conditions.	• Structures, roads, and people are at increasing risk from wildfires. • Many structures do not have defensible space around them. • Firefighting access is limited and challenging. • Existing agency vegetation thinning and prescribed burn programs face constraints.	• Additional proactive fire prevention measures to reduce fuel loads, particularly along major roads and near primary structures and utilities • Emergency evacuation planning and adequate boat transport capacity for residents and tourists during the summer wildfire season
Flooding		
• Historic streamflow patterns have changed with large autumn rain-on-snow flood events causing extensive damage.	• Major flooding, debris flows, channel migration, and erosion pose risks to human safety, structures, and critical infrastructure, as well as reducing recreational access. • Developed areas previously considered safe from damage are now at risk. • NPS has persistent budget constraints that limit its ability to adequately maintain roads and levees.	• Improved monitoring of river stages and better understanding of changing flood risks • More resilient infrastructure to prevent emergencies related to road and utility damage • Clear long-term strategy for maintaining critical public facilities in the face of both flood and drought conditions
Aquatic and Biological Resources		
• The Stehekin area provides high-quality fish and wildlife habitat. • Changing environmental conditions are expected to change streamflow patterns and affect forest health.	• Natural resources are vital to fish and wildlife populations, local quality of life, and attracting visitors. • Recreation/tourism and future development may impact these resources.	• Balance growth with protection of fish and wildlife, shorelines and streambanks, water quality, wetlands, and views. • Cluster development to retain larger tracts of undisturbed habitats. • Manage visitor access and behavior to allow enjoyment of the river and surrounding landscapes without causing damage. • Reduce flood-related pollution and debris, especially from properties located near the river.
Public Services and Utilities		
• Electricity, water supply, wastewater treatment, and solid waste management systems are small in scale. • Services are provided through a combination of public infrastructure, local utility providers, and individual systems.	• Service capacity and reliability can influence the location and amount of future development, including housing.	• Ensure a reliable and resilient power supply. • Make investments in system upgrades for aging infrastructure (such as the Stehekin Powerhouse Modernization project). • Coordinate housing and development with utility capacity.
Housing		
• Privately owned land represents a limited and important component of the community's housing base and overall development capacity. • The amount of land available for future development is also constrained by natural hazards (e.g., critical areas).	• There is a lack of housing options for seasonal and year-round residents. • The housing supply is very limited for younger residents and lower wage–earning workers seeking to live and work in Stehekin. • Limited amount of buildable land, combined with flood risk and other development constraints, continues to affect the community's ability to maintain and expand its housing stock.	• Provide more housing to support a broader range of both year-round residents and seasonal workers. • Provide housing for critical service employees (e.g., post office and PUD). • Expand lodging options to accommodate visitors and support tourism. • Create a mix of housing types such as shared units, small multi-family, ADUs, and single-family homes.

Current Conditions	Key Issues	Community Needs
Economic Stability		
• Recreation and tourism are key to local economy and closely tied to the natural environment. • Year-round residents operate businesses, maintain infrastructure, and support critical services. • NPS and Chelan PUD provide significant services and infrastructure to sustain basic community functions.	• Balance economic stability with protection of the valley's natural character. • Preserve the identify and heritage of the community.	• Establish clear development standards that limit the scale of development, encourage compatibility with community character, and protect natural resources. • Prioritize small-scale, locally supported economic activity. • Preserve the limited private land base. • Align community planning with policies for the national recreation area.
Transportation		
• Stehekin can only be reached by passenger ferry, private boat, small aircraft, or trails. • Barge service is critical to support movement of goods between Stehekin and areas down the lake. • Stehekin Landing functions as the primary transportation hub. • The limited local road network is shared by multiple users. • Upper portions of Stehekin Valley Road are damaged by flooding and river channel migration.	• Lack of clarity in zoning definitions may affect the relocation, continuation, or expansion of barge service facilities over time. • Local road networks can be congested and unsafe during the peak season. • Community opinions differ about reopening of Upper Stehekin Valley Road, which is under NPS jurisdiction. • Stehekin Landing experiences congestion during arrival/departure of passenger boats. • Long-term parking options at the Landing are limited.	• Support regulations that allow barge-related operations in appropriate shoreline and transportation-serving locations without automatically treating them as industrial uses. • Create a coordinated Lake Chelan-wide transportation strategy. • Improve traffic flow/circulation within the Landing area; for example, through establishing one-way traffic patterns in certain locations or at busy times. • Improve conditions for pedestrians and cyclists on the waterfront through clearer circulation routes and safer shared spaces. • Improve parking organization, regulations, and enforcement in the Landing area.
Parks and Recreation		
• Recreation is central to Stehekin's identity and economy. • NPS Golden West Visitor Center was recently closed.	• Expanding visitor accommodations and recreational opportunities must be balanced with protection of natural resources and community character.	• Maintain and improve visitor orientation and information services. • Provide lodging and recreational facilities at an appropriate scale. • Improve winter access and opportunities. • Maintain reliable recreation access and transportation connections. • Ensure that increased visitation does not degrade environmental conditions, community character, or visitor experiences. • Support walking, bicycling, and other low-impact recreation. • Strengthen stewardship and education (e.g., Leave No Trace).
Land Use and Zoning		
• Most land in Stehekin is owned by private owners and NPS. • The amount of privately owned land has declined over time as parcels have been acquired by or transferred to the federal government and incorporated into the LCNRA. • Most privately owned parcels are zoned RR (RR2.5 to RR20).	• A limited amount of land is available to accommodate housing, local services, and economic activity. • Current zoning code does not reflect past subdivisions and development patterns that resulted in smaller residential lots.	• Evaluate opportunities to return limited areas of suitable land from federal to private ownership in order to support housing, essential services, or small-scale community development while maintaining resource protection and park stewardship. • Review land use and development standards to help achieve community priorities; for example, through zoning changes and overlays.

7 Goals and Policies

7.1 Environmental/Critical Areas

7.1.1 Forests

Goal 1: Implement and Coordinate Comprehensive Fire and Forest Health Planning.

Policy 1.1: Educate residents and public. Update, integrate, and implement applicable planning documents, including the Stehekin Valley Forest Management Plan, Wilderness Stewardship Plan, Fire Management Plan, Forest Fuels Reduction Plan, and evacuation and safety zone planning efforts.

Policy 1.2: Ensure consistency among federal, state, and County wildfire planning documents, including incorporation of relevant mitigation measures identified in the Chelan County CWPP.

Policy 1.3: Streamline interagency and public communications regarding prescribed burns and fuel treatment activities to improve transparency, preparedness, and community awareness.

Goal 2: Reduce Wildfire Risk Through Proactive Fuels Management.

Policy 2.1: Pursue coordinated fuel load reduction measures with the NPS, DNR, Chelan County, the Cascadia Conservation District, and private landowners.

Policy 2.2: Implement FirewiseUSA® and related wildfire preparedness measures, including mitigation strategies identified for Zone A (Stehekin area) in the Chelan County CWPP. Work with NPS to create defensible space if not possible on private property.

Policy 2.3: Prioritize fuels reduction treatments on valley walls, along current firelines established during 2024 Pioneer Fire, along access roads, and in areas where topography and vegetation conditions increase wildfire intensity or threaten evacuation routes.

Policy 2.4: Incorporate annual mechanical thinning and other appropriate treatment methods, where consistent with environmental protections and wilderness policy, to complement prescribed fire and reduce hazardous fuel accumulations.

Policy 2.5: Encourage development patterns that allow firebreaks, fuel treatments, and emergency response resources to be concentrated in defined areas, reducing fragmentation and improving defensible space effectiveness.

Goal 3: Reduce Long-Term Exposure of Development to Wildfire Hazard.

Policy 3.1: Discourage new development in areas identified as having extreme wildfire hazard where mitigation is infeasible or would result in significant ecological or public safety tradeoffs.

7.1.2 Flooding

Goal 1: Reduce Flood Risk Through Land Use and Development Siting.

Policy 1.1: Encourage elevation, floodproofing, or other retrofits of existing structures located in flood-prone areas where relocation is not feasible.

Goal 2: Strengthen Infrastructure Resilience to Flooding and Changing Hydrology.

Policy 2.1: Evaluate the long-term viability of floodproofing, elevating, or relocating maintenance yards, service facilities, and other critical infrastructure based on lifecycle cost, public safety, and climate resilience considerations.

Policy 2.2: Coordinate with the Federal Highway Administration and relevant agencies to implement recommendations from the Long-Term Access and Resiliency Strategy, consistent with community safety and watershed protection goals.

Policy 2.3: Maintain road alignments in existing locations where relocation would increase risk to private lands or exacerbate floodplain impacts, unless comprehensive analysis demonstrates a net public and environmental benefit.

Goal 3: Improve Floodplain Management, Monitoring, and Planning.

Policy 3.1: Coordinate with and support the NPS in the review and update of the Stehekin River Comprehensive Implementation Plan to reflect current flood risks, sediment transport dynamics, and projected climate trends affecting hydrology and geomorphic conditions.

Policy 3.2: Implement regular topographic and geomorphic monitoring, including LiDAR and/or Structure-from-Motion surveys, to track changes in channel position, floodplain elevation, and erosion patterns.

Policy 3.3: Collect and archive aerial imagery and ground-based photographs following major flood events to document impacts, inform post-event analysis, and improve future planning and hazard mitigation.

Policy 3.4: Clarify and maintain a distinction between land protection planning and river management functions to ensure that floodplain management decisions are based on current risk, science, and watershed conditions.

7.1.3 Fish and Wildlife

Goal 1: Conserve Aquatic and Riparian Systems.

Policy 1.1: Reduce land consumption and limit sprawl by encouraging clustered development patterns that preserve open space, intact floodplains, and connected natural systems.

Policy 1.2: Protect and restore riverine and floodplain habitats by maintaining undeveloped areas that function as fish spawning, rearing, and nursery habitat, including areas suitable for salmon redd formation.

Policy 1.3: Provide designated river access points, boat launches, and trails designed to minimize bank erosion, protect riparian vegetation, and prevent intrusion into wetlands and other sensitive habitats.

Policy 1.4: Preserve and manage sandbar and shoreline habitats that support migratory birds by limiting development, seasonal disturbance, and incompatible recreational uses in these areas.

Policy 1.5: Restrict placement and long-term storage of mobile homes, trailers, and recreational vehicles within river corridors and flood-prone areas to reduce contamination risks, debris hazards during flood events, and visual impacts on natural shorelines.

Policy 1.6: Educate property owners of the valley on the Shoreline Management Act and applicable local shoreline requirements and enforce these regulations to ensure that development and land-disturbing activities near water bodies meet established environmental protection standards.

Goal 2: Protect Fish and Wildlife from Human Disturbance.

Policy 2.1: Develop and distribute educational materials at boat launches, river access points, and visitor facilities describing the effects of human presence on wildlife, including the impacts of off-leash dogs on bird nesting and foraging behavior.

Policy 2.2: Enforce existing leash requirements within river corridors, sandbars, and other sensitive wildlife habitats to reduce disturbance and displacement of birds and other species.

Policy 2.3: Implement fishing management and education strategies to reduce ecological impacts, including outreach on cumulative effects of harvest pressure and repeated catch-and-release on fish health, size structure, and population resilience.

Policy 2.4: Evaluate voluntary guidelines or regulatory measures to limit repeated boat access to the same fishing locations within a single day in order to reduce stress on fish populations and localized habitat degradation.

Goal 3: Prevent Water Pollution and Reduce Runoff.

Policy 3.1: Establish standards and conduct regular inspections for fuel storage and handling to ensure spill prevention measures are maintained and effective.

Policy 3.2: Require spill prevention plans and accessible spill response kits at all fuel storage and fueling locations throughout the valley to enable rapid containment of accidental releases.

Policy 3.3: Encourage the planting of native trees and shrubs between agricultural fields, lawns, and river corridors to filter runoff, stabilize soils, and enhance riparian habitat.

Policy 3.4: Limit expansion of nonpermeable surfaces and encourage low-impact development techniques that reduce stormwater runoff and protect water quality.

Policy 3.5: Ensure on-site wastewater treatment (septic) systems are properly designed, maintained, and functioning to prevent contamination of groundwater and surface waters.

Goal 4: Reduce Wildfire Risk to Aquatic and Biological Resources.

Policy 4.1: Promote adoption of FirewiseUSA® management principles across residential, commercial, and public lands to reduce risks to life, property, and adjacent natural habitats.

Policy 4.2: Support prescribed burning, thinning, and other forest treatments on public and forest lands to reduce surface fuels, restore forest health, and limit the severity of seasonal wildfires and associated post-fire impacts to watersheds.

Policy 4.3: Establish and maintain strategic firebreaks around residential areas and other high-risk zones to reduce the likelihood of high-intensity fire spreading into critical habitat areas.

Policy 4.4: Discourage development in areas most vulnerable to wildfire, post-fire flooding, and debris flows and require structures to be sited and designed to minimize encroachment into natural habitat and wildlife interface areas.

Policy 4.5: Encourage use of fire-resistant building materials for new construction and substantial renovations, including non-combustible roofing, siding, protected soffits, decks, and vents according to WUI standards.

Goal 5: Coordinate Long-Term Habitat Protection and Resilience.

Policy 5.1: Pursue long-term protection and enhancement of critical natural habitat areas through multi-jurisdictional planning and implementation efforts that include enforceable safeguards and monitoring mechanisms.

Policy 5.2: Encourage interagency collaboration among federal, state, and local agencies; environmental organizations; timber interests; and private landowners to establish shared goals and long-term agreements focused on wildfire mitigation, habitat conservation, and community resilience.

7.2 Public Services and Utilities

Goal 1: Ensure Public Services and Utilities in Stehekin Operate Safely and Reliably While Minimizing Demand Growth.

Policy 1.1: Encourage investment in residential weatherization measures, including insulation, air sealing, and high-performance windows, to reduce energy demand and improve indoor comfort. Encourage efficient building design including site orientation and passive house strategies.

Policy 1.2: Encourage development and remodels that incorporate non-electric or alternative fuel systems for pumping, water heating, space heating, cooling, and cooking to reduce reliance on the electric grid.

Policy 1.3: Promote the efficient use of electric heating, ventilation, and air conditioning (HVAC) systems.

Policy 1.4: Promote the use of high-efficiency lighting, including LED fixtures and bulbs, to minimize overall system load.

Policy 1.5: Support utility planning and infrastructure to maintain reliable service.

Policy 1.6: Support Chelan PUD on the implementation of efficiency programs and potential behavior-based energy reduction strategies for all user groups. Encourage voluntary participation by all user groups in energy conservation and demand reduction measures.

Policy 1.7: Leveraging AMI data, support the deployment of programs available to all customers that will reduce energy use and demand, inform demand management strategies, and enable potential demand response programs.

Policy 1.8: Encourage coordination between Chelan PUD, Chelan County, and the NPS to assess system-wide energy needs and develop strategies for high energy users and high-demand facilities, including rate structures, policies, and distributed energy options to better manage demand and system constraints.

Policy 1.9: Encourage programs to reduce energy use in underutilized structures.

Policy 1.10: Identify, develop, and maintain public and temporary adaptation spaces available during emergencies, including designated shelters during weather-related hazard events.

Policy 1.11: Relocate or construct critical water supply and treatment facilities outside of areas subject to flooding, channel migration, or landslide hazards, and upgrade systems to address changing streamflow patterns, including higher winter flows and reduced summer baseflows.

7.3 Housing

Goal 1: Provide Flexible and Context-Sensitive Housing Opportunities that Adapt to the Needs and Character of the Stehekin Community.

Policy 1.1: Adopt zoning classifications and/or overlay districts that clearly define and regulate habitation of recreational vehicles and other rural residential (RRI/RRR) uses in a manner consistent with community character and infrastructure capacity.

Policy 1.2: Maintain a regulatory framework with minimal and targeted restrictions, ensuring that housing standards preserve local character and protect health, safety, and environmental resources while avoiding unnecessary barriers to housing availability.

Goal 2: Increase Housing Availability for Residents and Local Workers While Maintaining the Character of the Community.

Policy 2.1: Pursue collaborative strategies with public agencies and private property owners to address housing needs without necessarily requiring the creation of new structures, including options like reusing existing buildings, increasing occupancy of existing homes, and allowing additional ADUs.

Policy 2.2: Consider incentives for shared facilities or common areas (e.g., gardens, workshops) and other shared housing models that efficiently utilize existing land and infrastructure while supporting affordability and community cohesion.

Policy 2.3: Coordinate with the NPS to evaluate opportunities for temporary or seasonal use of underutilized NPS housing to support local workforce needs and seasonal workers.

Policy 2.4: Encourage contracting and employment practices that prioritize hiring local residents who already have housing in the valley, where consistent with agency policies and equal opportunity requirements.

Goal 3: Support a Stable, Year-Round Residential Community.

Policy 3.1: Evaluate non-regulatory approaches to discourage long-term absentee ownership where it contributes to housing scarcity or reduced year-round occupancy.

Policy 3.2: Monitor housing market and use trends to inform adaptive management strategies that support a stable, year-round residential community.

7.4 Economic Sustainability

Goal 1: Sustain a Viable, Year-Round Community Through Strategic Parcel Management.

Policy 1.1: Support parcel ownership patterns and land-use regulations that enable economic activity necessary to sustain the community, including small-scale and visitor-serving uses compatible with local capacity and environmental constraints.

Policy 1.2: Preserve opportunities for full-time residents to live and work within the community by maintaining an adequate supply of developable parcels consistent with environmental constraints and infrastructure capacity.

Policy 1.3: Ensure that land use and ownership decisions account for the provision and long-term viability of critical services and facilities.

Goal 2: Preserve Rural Character and Natural Systems Through Conservation-Oriented Design.

Policy 2.1: Encourage cluster development to conserve larger areas of undeveloped land on large parcels.

Policy 2.2: Limit land trades that would convert non-buildable parcels into buildable parcels in a manner that increases environmental risk or undermines conservation goals.

Policy 2.3: Establish high visual sensitivity areas and apply development standards to new development to protect scenic quality, including tree retention along roadways and protection of key view corridors.

Policy 2.4: Allow flexible setbacks and siting standards where appropriate, including reduced setbacks adjacent to public lands, in order to preserve open space and minimize fragmentation, while considering defensible space.

Goal 3: Protect Priority Lands and Manage Public Ownership Transitions.

Policy 3.1: Evaluate mechanisms for land exchanges with private property owners and transfers of federal property to maintain a viable private land base and advance LCNRA land protection goals.

Policy 3.2: Discourage land acquisitions by the NPS to avoid reduction in the supply of developable parcels necessary to sustain the resident community.

7.5 Transportation

Goal 1: Reduce Reliance on Single-Occupancy Motor Vehicles During High Season.

Policy 1.1: Encourage increased use of shared transportation services, bicycles, and electric bicycles to reduce the number of private vehicles on the road and decrease parking demand.

Policy 1.2: Develop a community map for recommended routes for public transportation, bicycles, and electric bicycles.

Policy 1.3: Evaluate the feasibility of a shared vehicle system with designated parking areas to consolidate vehicle use and limit dispersed parking impacts.

Policy 1.4: Coordinate with the NPS and other partners to assess potential financial support or subsidies for public transportation services serving the valley.

Policy 1.5: Promote a visitor experience in which vehicles are not necessary after arrival by boat and supported by expanded walking, bicycling, and e-biking connections between arrival points and key destinations.

Goal 2: Maintain Rural Character and Low-Impact Transportation Conditions.

Policy 2.1: Retain low speed limits and existing roadway character to support safety, preserve rural conditions, and reduce environmental and community impacts.

Policy 2.2: Limit the number of private vehicles associated with rental properties and visitor accommodations in order to manage traffic volumes and reduce impacts from traffic.

Policy 2.3: Develop and improve non-motorized infrastructure, including a Lower Stehekin Valley frontage trail or multi-use path, to provide safe alternatives to vehicular travel while preserving the community's character.

Policy 2.4: Promote a year-round mobility service through public-private partnerships, subsidies, or other funding mechanisms to provide alternatives to private car travel while preserving the community's character and supporting local services.

Goal 3: Promote Safe and Responsible Transportation Practices.

Policy 3.1: Establish community-wide safe-use standards, including speed compliance, helmet use for bicyclists, and road-sharing expectations.

Policy 3.2: Require renters and visitors operating motor vehicles or bicycles to acknowledge and adhere to safe-use standards, including speed compliance, helmet use for bicyclists, and road-sharing expectations.

Policy 3.3: Enforce prohibition of bicycle use on designated park hiking trails and other areas where resource protection or safety concerns warrant restrictions.

Policy 3.4: Provide clear visitor information regarding emergency response limitations, including distance to hospital facilities and evacuation timeframes, to support informed decision-making and risk awareness.

Goal 4: Recognize Barge Service as an Essential Component of the Transportation Network in Stehekin and Lake Chelan.

Policy 4.1: Support a Lake Chelan-wide approach to planning for marine freight access, terminal functions, and barge service locations, including both Stehekin and down-lake sites.

Policy 4.2: Coordinate with Chelan County to clarify zoning definitions for transportation or shipping terminals, water-dependent uses, and marine freight facilities to avoid unintended barriers to barge operations.

Policy 4.3: Evaluate zoning and shoreline regulations that distinguish short-duration marine freight transfer and barge loading activities from heavier industrial land uses; modify shoreline designations as necessary and appropriate.

Policy 4.4: Support identification and preservation of appropriate sites for barge service and freight transfer to maintain long-term reliability of lake-based transportation.

Goal 5: Establish a Coordinated Parking System that Supports Residents, Visitors, and Service Providers While Reducing Congestion, Protecting the Waterfront, and Aligning with Stehekin's Scale and Access Constraints.

Policy 5.1: Develop and adopt a community-informed parking management plan that defines parking locations, durations, user priorities, and enforcement mechanisms.

Policy 5.2: Identify and designate additional long-term and medium-term parking areas in locations that minimize conflicts with core activity areas and shoreline access.

Policy 5.3: Prioritize relocation of parking away from the waterfront side of the road to improve safety, circulation, and public access to shoreline areas.

Policy 5.4: Establish limits on the number and duration of concessionaire and NPS seasonal vehicles to reduce peak-season congestion.

Policy 5.5: Implement clear parking duration standards (short-, medium-, and long-term) and enforce them through locally appropriate mechanisms.

Policy 5.6: Improve tour bus circulation by formalizing and upgrading turnaround areas to reduce roadway conflicts and idling.

Policy 5.7: Coordinate parking management with transportation providers to align parking supply with actual access modes and demand patterns.

Goal 6: Maintain and Improve Existing Transportation Infrastructure for Multiple Users.

Policy 6.1: Work with the NPS to design and construct a permanent repair of Company Creek Road.

Policy 6.2: Incorporate non-motorized transportation into road improvements.

7.6 Parks and Recreation

Goal 1: Develop a Safe and Connected Trail System.

Policy 1.1: Collaborate with the NPS and Chelan PUD to plan and evaluate a community trail system that supports non-motorized travel for residents and visitors.

Policy 1.2: Prioritize trail alignments that improve safety by separating pedestrians and cyclists from vehicle traffic where feasible.

Policy 1.3: Incorporate site-specific improvements, such as slope stabilization, to ensure long-term trail durability and user safety.

Policy 1.4: Coordinate with utility providers to explore opportunities for undergrounding power lines along trail corridors where feasible to reduce visual impacts.

Goal 2: Improve Connectivity Between Key Destinations in the Valley to Expand the Network of Recreational and Transportation Routes.

Policy 2.1: Identify and evaluate opportunities to extend and connect existing trails to key destinations, including residential areas, recreation sites, and visitor facilities.

Policy 2.2: Assess the feasibility of new river crossings, including a pedestrian bridge near the former Boulder Creek bridge abutments, to enhance access to areas such as the Stehekin River Trail, Rainbow Falls, and the Harlequin Bridge area.

Policy 2.3: Support development of multi-season trail uses, including opportunities for winter recreation such as cross-country skiing, when conditions allow and where consistent with environmental conditions and maintenance capacity.

Goal 3: Pursue Coordinated and Informed Recreation Planning.

Policy 3.1: Engage the local community in identifying priorities, design considerations, and phased implementation strategies for recreation improvements.

Policy 3.2: Coordinate planning and implementation of trail and recreation improvements with the NPS, Chelan PUD, Chelan County, and the Stehekin community.

Policy 3.3: Pursue joint funding and partnership opportunities to support feasible, cost-effective recreation projects.

Policy 3.4: Align recreation improvements with environmental protections, regulatory requirements, and the rural character of the valley.

Policy 3.5: Identify and integrate relevant elements of past proposals into current planning and feasibility assessments that are adaptable to current community needs and environmental conditions.

Policy 3.6: Explore opportunities to pursue historic designation of the Courtney Homestead and evaluate its potential use as an interpretive resource managed by the NPS, the local community, or through a collaborative partnership.

7.7 National Park Service

Goal 1: Take Leadership at the County Level to Encourage the NPS to Follow Adopted Implementation and Coordination Plans as Guidance for Future Policy- and Decision-Making Regarding Environmental Management.

Policy 1.1: Incorporate NPS staff at the Park or Regional level in a Stehekin Roundtable for collaboration, decision-making, and adaptive management.

Policy 1.2: Consider leveraging community assets, including the work behind this Community Plan, in launching a "gateway planning" effort with the NPS.

Policy 1.3: Encourage the NPS to re-establish its historic presence in the valley and continue its support for the economic well-being of the community, including through the public services it provides.

7.8 Zoning

Goal 1: Establish a Rural-Scaled Zoning Framework Consistent with Community Capacity.

Policy 1.1: Apply zoning standards that reflect Stehekin's rural character and limited access, rather than suburban development norms.

Policy 1.2: Determine appropriate boundaries for residential infill that is outside of critical areas and apply zoning accordingly.

Policy 1.3: Consider applying RV zoning surrounding the Stehekin ferry landing rather than the RP district to encourage smaller buildings, bigger setbacks, and the potential for residential use of properties where there is sewer and water available.

Policy 1.4: Support clustered housing and site design concepts that preserve open land, reduce infrastructure extensions, and maintain rural character.

Policy 1.5: Encourage phased, small-scale improvements that align with community need and service capacity.

Policy 1.6: Incorporate clear guiding principles within the zoning code that emphasize rural character, environmental limits, and community values, avoiding unnecessary regulatory complexity.

Policy 1.7: Consider applying RRR zoning from the head of the lake to the Stehekin School, allowing for additional residential infill, provided other standards for screening and structure size are in place.

Policy 1.8: Consider applying RR2.5 zoning throughout the remainder of the valley to provide flexibility in land development, while complying with all other regulations.

Goal 2: Protect Environmental Resources and Hazard Areas Through Zoning.

Policy 2.1: Limit development within floodplains, channel migration zones, and areas at high risk of wildfire, mudflows, or other natural hazards.

Policy 2.2: Encourage clustered development patterns to reduce environmental impact.

Policy 2.3: Apply development standards to protect scenic quality, including tree retention along roadways and preservation of key view corridors.

Policy 2.4: Limit the development of new marinas and expansion of water-dependent facilities where such development would adversely affect shoreline conditions or visual character.

Policy 2.5: Require that public facilities and associated structures be sited, designed, and operated to minimize visibility from public viewpoints and integrate landscaping that visually connects new development with the surrounding environment.

Goal 3: Promote Compatibility and Balanced Use of Private and Public Lands.

Policy 3.1: Ensure adjacent land uses are compatible in scale, intensity, and function to prevent conflicts and preserve community cohesion.

Policy 3.2: Require that structures and site design protect both private use and adjoining public spaces, ensuring that activities on private property do not detract from appropriate public use and that public uses are regulated to respect adjacent private development.

Goal 4: Support Visitor Accommodations While Encouraging Compact Development and Diverse Housing Options.

Policy 4.1: Recognize that visitor accommodations, including STRs, play an important role in Stehekin's visitor economy and provide supplemental income for many property owners. Any future regulations should balance these economic benefits with the community's need for long-term housing, year-round residency, and essential workforce housing.

Policy 4.2: Develop Stehekin-specific STR regulations through a future public process rather than applying the County's general STR regulations. Future regulations should reflect Stehekin's unique access constraints, limited housing supply, infrastructure capacity, seasonal economy, and the goals of this Community Plan.

Policy 4.3: Encourage future STR regulations that support compact development by allowing greater flexibility for visitor accommodations within designated village, mixed use, or other appropriate development areas where housing and services are intended to be concentrated.

Policy 4.4: Consider allowing additional flexibility for STRs or other visitor accommodations when they are incorporated into new development that increases the overall supply of housing or lodging without displacing existing long-term residences.

Goal 5: Advance Sustainable Economic Activity Compatible with Natural Resources.

Policy 5.1: Acknowledge the uniqueness of Stehekin’s natural resources and ecologically oriented recreational amenities in zoning decisions.

Policy 5.2: Support ecotourism and community-led tourism initiatives that enhance economic viability while maintaining environmental sustainability and resource protection.

Policy 5.3: Apply building and development standards that address energy efficiency, fire safety, and site design features that preserve the forested community.

Policy 5.4: Permit seasonal or temporary visitor-serving uses that support local economic activity and ecotourism, provided they operate at a scale consistent with environmental carrying capacity and community infrastructure limitations.

Policy 5.5: Consider applying RV zoning in the areas surrounding the Stehekin Landing to allow for private recreation-based commercial development.

8 Implementation

The Stehekin Community Plan provides policy guidance to inform decisions by Chelan County, partner agencies, and the community. Implementation will occur through a combination of regulatory actions, capital planning, interagency coordination, and community-led efforts. Because land ownership, infrastructure, and services in Stehekin are distributed across multiple entities, successful implementation depends on clearly defined roles and ongoing coordination.

This Plan does not assign regulatory authority beyond existing jurisdictional responsibilities. Instead, it is intended to guide how existing authorities, programs, and investments are applied within the Stehekin Valley. This section describes initial priorities for funding planned improvements, based on community input in the development of this Plan.

This section is intended to be further developed as local changes are made so that it can be used in the preparation of County capital facilities plans, annual budgeting and other funding decisions affecting the Stehekin Community. The primary responsibility for implementation will be Chelan County, in compliance with compliance with RCW 36.70A and the WAC 365-196 provisions. However, the ownership of the Plan and the primary responsibility for plan maintenance, review, and monitoring lies with the community—residents, the NPS, the PUD, business owners, property owners, and other stakeholders in addition to Chelan County.

8.1 Priority Actions

To achieve the goals of this plan, several planning efforts must be pursued in the near, medium, and long term.

- Near-term Actions (0 to 6 years)
  - Establish a Stehekin Roundtable and strengthen ongoing communication and further develop Plan implementation.
  - Integrate the Stehekin Community Plan into the Chelan County Comprehensive Plan.
  - Evaluate and, if appropriate, adopt zoning updates or overlays consistent with community priorities.
  - Continue coordination with Chelan PUD on power system upgrades and capacity planning.
  - Improve clarity around development constraints, including floodplain and critical areas requirements.
  - Support efforts to assess housing needs, including:
    - Number and type of units needed
    - Workforce and seasonal housing demand
  - Identify opportunities to improve transportation and circulation at the Stehekin Landing.

  - Maintain and support reliable passenger and barge transportation services.
  - Coordinate with NPS on near-term infrastructure and facility needs.
- Medium-term Actions (6–10 years)
  - Implement zoning or policy changes adopted through the Comprehensive Plan process.
  - Support development of housing solutions appropriate to the Stehekin context.
  - Evaluate opportunities for infrastructure improvements, including:
    - Water and wastewater systems
    - Transportation circulation and safety
  - Continue coordination with NPS regarding land management, access, and facility planning.
  - Explore potential partnerships or pilot projects (for example, shared housing or infrastructure improvements).
- Long-term Actions
  - Monitor long-term trends in:
    - Housing availability
    - Population and workforce
    - Land ownership patterns
  - Evaluate the effectiveness of zoning and policy changes.
  - Continue to align infrastructure capacity with community needs.
  - Reassess long-term opportunities related to:
    - Land-use patterns
    - Housing supply
    - Economic sustainability

8.2 Coordination and Partnerships

Effective implementation of this Plan requires ongoing coordination among agencies and the community. No single entity has full control over land use, infrastructure, and services in Stehekin, making collaboration with Chelan PUD, NPS, and other parties essential. Interagency coordination should emphasize information sharing, alignment of planning and investment decisions, and avoidance of conflicting policies or actions.

8.3 Monitoring and Adaptive Management

The Stehekin Community Plan is intended to be a living document that can respond to changing conditions over time. Monitoring progress and adapting strategies will help ensure that the Plan remains relevant and effective.

Progress may be evaluated using qualitative and, where available, quantitative indicators such as:

- Housing availability and occupancy trends

- Changes in land ownership patterns
- Infrastructure capacity and reliability
- Community feedback and engagement
- Implementation of priority actions

A combination of formal data and community input may be used to assess progress.

8.3.1 Plan Review and Updates

The Plan should be reviewed periodically in coordination with updates to the Chelan County Comprehensive Plan, which is on a 10-year cycle. A general review cycle of approximately every 5 to 10 years may be appropriate, or sooner if significant changes occur (for example, major infrastructure changes, natural hazards, or shifts in land ownership).

8.3.2 Adaptive Management

Adaptive management allows the County, agencies, and community to:

- Adjust strategies based on new information.
- Respond to changing environmental, economic, or regulatory conditions.
- Refine implementation approaches over time.

This approach recognizes that conditions in Stehekin are dynamic and that flexibility is necessary to support long-term community viability. The work from the Community Advisory Group that was formed to provide recommendations and oversight for this plan could be supported in the long term by the creation of a Stehekin Roundtable. The Roundtable would include representatives from Stehekin residents, property owners, the Chelan PUD, the County, and the NPS to participate in this adaptive management strategy. The Roundtable should prepare an annual written report or verbal presentation to the County Council by June 30 each year. The report should include recommended projects for timely consideration in the annual budgeting process.

9 Community Engagement Summary

Community input has been a fundamental part of the Community Plan drafting process to identify community priorities, early goals and policies, and directions for the Comprehensive Plan. Due to Stehekin's remote location, engagement often occurs through a mix of in-person interactions, posted notices, word-of-mouth, and, increasingly, through digital communication.

9.1 Engagement Process

Community engagement for the Stehekin Community Plan has been an iterative process shaped by coordination between Chelan County, Chelan PUD, and the Stehekin community. The effort originated from a shared need to plan for the future of the electrical system alongside the County's broader comprehensive planning process, resulting in a jointly funded initiative.

Initial outreach began in 2024 but was delayed due to the Pioneer Fire. Engagement efforts resumed in May 2025, beginning with a public meeting to reintroduce the planning process, provide an overview of the project, and initiate community dialogue. Following this meeting, the project team began building an email distribution list, identifying key stakeholders, and preparing for more structured community engagement.

A broader community meeting was held in October 2025 to gather input on key topic areas and priorities and to share the project team's approach to forming a community advisory group. The advisory group was formally established and began meeting in November 2025. While flooding in December created minor delays, the advisory group continued to meet regularly with the project team and Chelan PUD through early 2026.

Ongoing engagement has included regular coordination with project partners, consistent collaboration with the advisory group, and periodic updates to the broader community, including a public update in February 2026. Input gathered through the October and November community engagement efforts, along with ongoing advisory group discussions and feedback, directly informed the development of the draft Plan, which was prepared in March 2026.

9.2 Ongoing Engagement

Following the release of the draft Plan, the community engagement process will continue through multiple opportunities for review and input, including advisory group feedback, broader community outreach, and formal public processes associated with Plan adoption.

9.2.1 Upcoming Engagement and Review Timeline

- March 31, 2026 – Draft Plan shared with Advisory Group for review and feedback
- April 17, 2026 – Deadline for Advisory Group feedback
- Late April/Early May 2026 – Project team incorporates feedback and refines Plan

- Early May 2026 – Final draft shared with Advisory Group and broader community (via website)
- Mid-May 2026 – Community meeting to present final Plan and outline additional comment opportunities
- Late May/Early June 2026 – Plan submitted to Chelan County Planning Commission and Board of County Commissioners
- Early July 2026 – Plan submitted to Washington State Department of Commerce for 60-day review
- July/August 2026 – State Environmental Policy Act (SEPA) environmental review and 30-day public comment period
- September–December 2026 – Comprehensive Plan adoption process, including public meetings with the Planning Commission

While the formal planning process for the Stehekin Community Plan will conclude following submission to the Washington State Department of Commerce, the Plan itself is intended to serve as an ongoing resource for the community. The joint funding provided by Chelan County and Chelan PUD supports the development of the Plan through this phase; however, long-term implementation and continued engagement will extend beyond the duration of the project.

The Plan represents a compilation of community input, technical analysis, and collaborative discussion. While not all elements of the Plan will be directly incorporated into Chelan County's Comprehensive Plan, the document provides a foundation of ideas, priorities, and strategies that can be used by community members, local organizations, and partner agencies moving forward.

Ongoing community engagement will rely on the same values that shaped this planning process—local leadership, collaboration, and shared stewardship. Community members, organizations, and partners are encouraged to continue discussions, advance priority projects, and use the Plan as a guiding resource for future efforts. Opportunities for engagement may include community-led initiatives, coordination with Chelan County and other agencies, and participation in future planning or implementation processes as they arise.

By providing a clear record of community priorities and perspectives, the Stehekin Community Plan is intended to support continued dialogue, informed decision-making, and community-driven action over time.

Notes on the Above Data and Associated Map

Map Name: NPS_LACH_CORRECTED_040826
Created by Hannah Pygott, Chelan County Natural Resources Department
April 8th, 2026

Primary Goal:
Illustrate as of final date of map creation ~ April 2026 (1) current private parcels, (2) federal (NPS) parcels that were once private and acquired by NPS and (3) original NPS boundary that part of the 1968 acquisition.

- Park was established October 2nd, 1968
- There was a boundary change September 23rd, 1998
- LACH data updated by the park December 2016 and provided to Chelan County Community Development early 2017.

Processing:
1. CCNRD received historic LACH shapefile and PDF deed files from Community Development, as it was received from NPS in 2017. This was reviewed and updated by individual parcel as there have been acquisitions since its creation and we identified some errors within the original data set.
2. CCNRD cross checked all parcels listed in the original LACH dataset against the PDF LACH Deeds, LACH Segment Maps and Chelan County Parcel GIS Data.
3. For ease of tracking updates and to avoid damage to the original dataset, we added a series of new attributes to a new shapefile. The original NPS data/ attributes remain intact. Discrepancies between the NPS original attributes and the CCNRD added ones illustrate the updated parcels/ changes from the original dataset. Additional attributes include:

CCNRD Added Attributes	Description/Data Legend
Date_NPS_Acquisition	YYYY- Date based on LACH Deed information. N/A value for parcels that we could not find the information for, or were not "acquired."
NPS_Acq_Prev_Priv	TRUE, FALSE, N/A *(Primary symbology source)* TRUE= previously private parcel acquired by the park, FALSE= part of original park boundary, not previously private, N/A= always was & still in private, PUB= Public, OTHER= Scenic or Easement
Owner_Name	Not necessarily current- based on a mix between LACH Deed at time of purchase & Current Chelan County Parcel Data
ESTATE_Rev	None= private, FEE= purchased, EASEM= Easement
STATUS_Rev	Fed= Federal, PRIV= Private, PUB= PUD Public
ATTRIBUTE_Rev	FEDEASEM= NPS Easement, FEDFEE= NPS Acquisition, PRIVnone= Private, PUBnone= PUB Public
Interest_Rev	Federal, Private, Public
Acreage	Calculated using the LACH dataset datum

Notes/Disclaimers:

1. Data not necessarily "Complete."
2. Chelan County Parcels Layer:
    a. The federal ownership in Stehekin is inaccurate and unreliable in the attributes of that data. Per Chelan County Community Development, any federal property in that dataset should be owned NPS. Currently there are a number of different federal entities listed. In theory, anything listed as private should be accurate though.
    b. Some of the parcel sizes and therefore boundary lines do not match between NPS_LACH data and Chelan County Parcel Layer. In general, the County's layer is showing more individual parcels than the NPS data. This would make the number of individual parcels acquired hard to quantify, and could account for some of the discrepancies in total acreage.
3. LACH Data/ Deed Files:
    a. There are multiple records that say multiple parcels were acquired, but there is only one parcel boundary. It is unknown if NPS did boundary line adjustments, or which data is correct (i.e., the County layer that shows more property lines versus NPS LACH data).
    b. There are no parcels that are tied to LACH 60 in the GIS data, but there is a LACH60 in the files.
    c. There was no LACH9 deed on file.
    d. LACH87 deed was "damaged" and not able to be opened.
    e. There were a number of "exchanges" that occurred. These were accounted for by showing what current ownership is for the private properties that were exchanged. Was not a 1:1 exchange for property size.
4. It is unknown if there was ever "Final" version of the NPS LACH maps created. The versions provided from the 2017 effort were labeled as "draft." Frank Soninno is the NPS Cartographer that Erin Fonville with Chelan County Community Development worked with on original data acquisition. This person no longer works with NPS, and the new point of contact is unknown. Final versions of these maps may have accounted for some of the errors found/ questions asked.

2017 LACH PDF Segment Maps:

1. Total Acres Acquired: 59,333.21
2. Total Acres Authorized: 61,948.70

2026 Corrected LACH: NEEDS TO BE VERIFIED BY USER BEFORE PUBLISHING

Ownership	Acreage CCNRD GIS
Federal, Original Park Boundary	59,128.17
Private	382.06
Federal Fee, Private Acquisitions	1,320.32
Public	2,059.21

Ownership	Acreage CCNRD GIS
Other: Easement/Scenic	12.80
Total Area	**62,902.58**

NEEDS TO BE VERIFIED BY USER BEFORE PUBLISHING

Ownership	Acreage CCNRD GIS	Acreage NPS LACH PDF
Total Federal (All FEDFEE)	60,429.51	59,333.21
Easement/Scenic	12.80	11.83

FID	Notes
151	This needs to be verified further as there may be a property line that is not showing on NPS data and part of that would be private, part would be NPS. Cross check with Chelan County GIS accordingly.
243, 169, 312, 292	Examples of parcels that are showing as smaller than what is shown on NPS Data boundary

Introduction

Executive Summary

Chelan County sits at the intersection of mountain snowpack, river systems, productive agricultural land, and growing communities—a geography that makes it both ecologically rich and increasingly exposed to the effects of a changing climate. This Climate Resilience Assessment represents the County's most comprehensive effort to date to understand how a changing climate is reshaping the conditions on which residents, businesses, and ecosystems depend, and to chart a path forward.

Key takeaways

Climate-exacerbated natural hazards are a present and ongoing threat to Chelan County. Residents and land managers have already witnessed its effects: shrinking snowpack that feeds irrigation systems and rivers, more frequent and severe wildfires that blanket communities in smoke and consume forests, extreme heat events that stress crops and outdoor workers, and flooding that damages roads, homes, and infrastructure. The findings of this assessment confirm that these trends will intensify in the decades ahead.

Several themes emerge consistently across the assessment:

- **Wildfire and wildfire smoke represent the most pervasive climate risk** facing the county. 99% percent of properties in Chelan County face some risk from wildfire over the next 30 years (First Street, 2026). Wildfire emissions from county lands averaged approximately 1.44 million metric tons of CO_2-equivalent per year between 2016 and 2024—by far the largest single source of the county's greenhouse gas inventory (Parametrix, 2025).
- **Drought and snowpack decline threaten the foundation of the county's economy and ecology.** Agriculture, hydropower, fisheries, recreation, and municipal water supplies all depend on reliable snowmelt. Spring snowpack in the Cascades has declined by 30–60% since the 1950s, and projections suggest continued and accelerating loss.
- **Flooding poses serious risks to infrastructure, housing, and community safety**, particularly in low lying areas along rivers, steep canyons, and downhill of recent wildfires. 73 county-owned bridges are located in floodplains; 14.9% of residential land sits within 100-year floodplains; peak streamflows are projected to increase by 7–30% by mid-century; and rainstorms are projected to become more intense (Raymond & Rogers, 2022).
- **Vulnerable populations bear disproportionate risk.** Farm workers, unsheltered individuals, people with disabilities, low-income residents, and those living in inadequately heated or cooled housing face the greatest exposure and have the least capacity to adapt. Nearly a third of county residents earn less than $49,999 per year; 29.2% identify as Hispanic or Latino, many of whom work in outdoor agricultural settings (U.S. Census Bureau ACS 5-Year Estimates, 2019–2023).

DRAFT

- **The county has significant existing resilience assets**, including strong natural resources management programs, an engaged stakeholder community, active hazard mitigation planning, and a public utility committed to long-term climate adaptation (Vision 2075).

History of climate resilience efforts in the County

Chelan County's engagement with climate and resilience planning has grown substantially in recent years. In 2020, Chelan County developed a Climate Resiliency Strategy in partnership with the University of Washington and many stakeholders. In 2022, the Board of County Commissioners adopted Resolution 2022-09, amending the 2017 Comprehensive Plan to integrate climate resilient goals and policies across multiple plan elements. The county has maintained active Hazard Mitigation Plans, updated in 2019 and 2024, and adopted an updated Community Wildfire Protection Plan in 2025. The county has also participated in collaborative regional efforts, including watershed planning, the Voluntary Stewardship Program, and the Our Valley Our Future regional sustainability initiative, which produced the Community Greenhouse Gas Inventory published in July 2025.

The development of this Climate Resilience Assessment in support of the 2026 Comprehensive Plan update represents the next step in that ongoing arc of work.

How to use this information

This assessment is designed to serve multiple audiences and purposes. For county planners and department staff, it provides a systematic foundation for incorporating climate risk into capital facilities planning, transportation investment decisions, land use regulations, and emergency preparedness. For elected officials, it offers a clear picture of where the county's greatest exposures lie and what actions and policy responses are most urgently needed. For community members, agricultural producers, businesses, nonprofit organizations, and tribal partners, it provides shared language and shared facts from which collaborative action can grow. For all audiences, it is intended as a living document—one that should be revisited as conditions evolve, and new science becomes available.

Hopes for this work moving forward

This assessment is intended to catalyze meaningful, coordinated action across sectors and communities. The hazards documented here do not respect jurisdictional boundaries or economic sectors. Effective responses will require sustained partnership between county departments, municipal governments, tribal partners, agricultural producers, conservation organizations, utilities, businesses, and residents. This document is offered in that spirit—as a shared foundation for building a more resilient Chelan County.

DRAFT

Acknowledgments

This Climate Resilience Assessment was developed by Perteet Inc. and EK Consulting, working in close partnership with the Chelan County Natural Resources Department and a broad coalition of community stakeholders.

Core Project Team: Elle Robinson and Mike Kaputa (Chelan County Natural Resources), Jason Detamore (Chelan County Public Works), Stan Smoke (Chelan County Emergency Management), and Susan Dretke (Chelan County Community Development).

Climate Advisory Team: Many individuals contributed time, expertise, and community perspective to the development of this assessment. Advisory team details are listed in Appendix C: Community Engagement and Public Outreach.

Consultant Team: Christina Wollman (Perteet Inc.) and Mandy Maxwell (EK Consulting).

GHG Inventory: The Community Greenhouse Gas Inventory was conducted by Parametrix, with support from Sustainable NCW, Chelan County Natural Resources, and Our Valley Our Future.

The Climate Resilience Assessment was supported with funding from Washington's Climate Commitment Act. The CCA supports Washington's climate action efforts by putting cap-and-invest dollars to work reducing climate pollution, creating jobs, and improving public health.

The Greenhouse Gas Inventory was supported by Grant No. DE-SE0000236 awarded by U.S. Department of Energy, State and Community Programs. The points of view in this inventory are those of the author and do not necessarily represent the official position or policies of the U.S. Department of Energy, State and Community Programs. Grant funds are administered by the Clean Buildings Program, Washington State Department of Commerce.

Relationship with the 2026 Comprehensive Plan Update

This Climate Resilience Assessment is a foundational document supporting the development of resilient goals and policies in the 2026 Chelan County Comprehensive Plan. It is prepared in accordance with Washington State's Growth Management Act (GMA) as amended by House Bill 1181 (2023), codified at RCW 36.70A.070(9), which requires all fully planning counties and cities to incorporate a Climate Element into their Comprehensive Plans.

The GMA requires that the climate element address climate resilience across the required plan elements, including Land Use, Housing, Capital Facilities, Utilities, Rural (for counties), and Transportation. This assessment provides the evidence base—climate hazard analysis, asset inventory, vulnerability and risk assessment, and policy audit—that informs goals, policies, and actions incorporated into those plan elements.

This Climate Resilience Assessment was developed in parallel with the Comprehensive Plan update, coordinating where possible, and sharing a public participation framework. Climate

DRAFT

resilient measures will be adopted as part of the 2026 Comprehensive Plan update, subject to approval by the Chelan County Board of Commissioners.

Assessment Process

This assessment was developed through a structured, five-step planning process guided by the Washington State Department of Commerce's (WA Commerce, 2025).

Step 1 – Explore Climate Impacts: The consulting team, working with the Climate Advisory Team, identified and analyzed climate hazards, indicators, and impacts specific to Chelan County.

Step 2 – Audit Plans and Policies: Existing County plans and policies were reviewed for their treatment of climate resilience and hazard mitigation, identifying both strengths and gaps that should be addressed in the 2026 Comprehensive Plan update.

Step 3 – Assess Vulnerability and Risk: Asset-hazard pairs were evaluated for sensitivity and adaptive capacity to determine vulnerability ratings. Vulnerability was combined with hazard probability and consequence data to produce risk scores.

Step 4 – Pursue Pathways: Based on the vulnerability and risk assessment, the team identified priority areas for action and developed directional policy recommendations.

Step 5 – Draft Plan with Goals and Policies: Resilient goals and policies were developed for each Element in the 2026 Comprehensive Plan.

Glossary of Key Terms

Adaptive capacity: A system's ability to adjust to climate change and minimize damage, influenced by governance, available resources, technologies, and social networks.

Air Quality Index (AQI): A system used by the EPA to communicate how clean or polluted the air is and whether it poses any health concerns.

Asset-hazard pair: A combination of a specific asset category (e.g., transportation infrastructure) and a specific climate hazard (e.g., extreme precipitation and flooding) that is analyzed for climate impacts, vulnerability, and risk.

Chill hour loss: Chill hours are the number of hours spent below 45°F. Chill hour loss is the cancellation of accumulated winter cold hours due to unseasonably warm daytime temperatures. When winter or early spring days heat up, deciduous fruit trees temporarily reverse their dormant state, throwing off their internal clocks and negatively impacting the upcoming season's blossoming and fruit set.

Climate Element: A required element of the Comprehensive Plan under RCW 36.70A.070(9), addressing climate resilience across land use, housing, capital facilities, utilities, rural lands, and transportation.

DRAFT

Exposure: The degree to which a system or asset is subject to climate-related hazards, such as rising temperatures or extreme weather events.

Greenhouse gas (GHG): Gases that trap heat in the atmosphere, contributing to climate change. Measured in metric tons of carbon dioxide equivalent (MT CO_2e).

Hazard: A climate-related event or condition that poses a threat to people, property, or ecosystems. In this assessment, the priority hazards are drought and snowpack decline, extreme temperatures and severe weather, extreme precipitation and flooding, and wildfire and wildfire smoke.

HB 1181: Washington's 2023 House Bill 1181 updates the state's Growth Management Act, requiring local governments to integrate climate change adaptation and emissions reduction into their comprehensive plans.

Magnitude: The extent of damage or loss associated with a climate hazard event, factoring in vulnerability, redundancy, cost, and criticality.

MT CO_2e: Metric tons of carbon dioxide equivalent. The standard unit for measuring greenhouse gas emissions.

Priority hazard: A climate hazard identified as most relevant to Chelan County based on frequency, consequence, and alignment with existing planning documents.

Probability: The likelihood of a climate hazard event occurring, based on historical data and future projections.

RCP 8.5: A higher greenhouse gas concentration scenario used in climate modeling, representing continued high emissions through the end of the century. Used as the primary scenario for this assessment because it does not differ significantly from RCP 4.5 prior to 2050.

Redundancy: The duplication of systems or components to ensure continued operation in the event of a failure.

Resilience:

Risk: The product of probability (likelihood of an event occurring) and magnitude (the extent of damage). Risks are categorized as Low, Medium, or High.

Scour Critical: A bridge that has been evaluated as having foundations that are unstable or at risk due to scour—the erosion of riverbed sediment by fast-flowing water.

Sensitivity: How inherently affected a system or asset is by climate impacts, considering characteristics such as age and condition of infrastructure, or socioeconomic factors like poverty.

Vulnerability: A function of a system's exposure, sensitivity, and adaptive capacity to climate change.

DRAFT

Wildland-Urban Interface (WUI): The geographical zone where human development and structures meet or intermingle with undeveloped wildland vegetation.

DRAFT

Chelan County Profile

Economic Base

Chelan County's economy is closely tied to its natural environment. Agriculture—centered on tree fruit production including apples, pears, and cherries—has historically defined the county's economic identity and continues to employ thousands of residents, including a significant seasonal farm worker population. The county is home to orchards, ranches, vineyards, and a growing array of food and beverage producers who depend on reliable water supplies, predictable growing seasons, and stable workforce conditions.

Hydropower is a major economic and environmental pillar of the county. The Chelan County Public Utility District (PUD) operates hydroelectric facilities on the Columbia River, Lake Chelan, and Company Creek, generating power that serves the county and the regional grid. Approximately 80% of the PUD's grid mix is supplied by hydropower, providing residents and businesses with some of the lowest electricity rates in the nation and a relatively low-emissions electricity supply. A privately owned natural gas distribution system serves the Wenatchee area, operated by Cascade Natural Gas Corporation.

Tourism and outdoor recreation form a significant and growing sector. Lake Chelan, the Wenatchee River, Mission Ridge, Leavenworth, Stehekin, and the extensive trail networks and wilderness areas of the North Cascades draw visitors from across the Pacific Northwest and beyond. The county's fairgrounds, parks, and open spaces support recreation for residents and visitors alike. Four-season recreation creates jobs but also exposes the economy to climate-related disruptions, including snowpack loss, wildfire and smoke, heat, and flooding.

The broader Wenatchee Valley serves as a regional commercial and services hub, with healthcare, retail, education, and government employment anchoring the local economy alongside agriculture, energy, and tourism.

Community Demographics and Social Vulnerability

Understanding who lives in Chelan County and which residents face the greatest barriers to adapting to worsening natural hazards is essential for designing equitable and effective resilience strategies. The following demographic profile draws on data from the Washington Office of Financial Management (2024) and the U.S. Census Bureau.

Key Demographics

Age distribution

Chelan County has a broadly distributed age profile, with notable concentrations in the working-age and older adult categories. Approximately 28% of residents are age 60 or older—a population segment that faces elevated health risks from extreme heat, wildfire smoke, and other climate

DRAFT

stressors. Children and youth (under 20) make up approximately 24% of the population. Full demographic data are provided in Appendix A: Community Demographics and Social Vulnerability.

Race and ethnicity

According to U.S. Census Bureau estimates, 92.8% of residents identify as White alone. Notably, 29.2% of residents identify as Hispanic or Latino—a population that is concentrated in the county's agricultural areas and includes many farm workers who face elevated occupational exposure to extreme heat and wildfire smoke.

Income and poverty levels

Poverty levels are moderate to high across the entire county, with the highest concentrations in the southern and eastern portions. Low-income residents face particular challenges in retrofitting housing for temperature resilience, relocating from flood-prone areas, or absorbing economic losses from climate-related disruptions to employment.

- 31.6% of households earn less than $49,999 per year
- 30.7% earn between $50,000 and $99,999
- 37.7% earn over $100,000

Rural characteristics

Chelan County is largely rural, with the majority of its 2,920 square miles consisting of agricultural lands, forests, and mountainous terrain outside of urban growth areas. While the Wenatchee Valley serves as the county's primary population and services hub, a significant share of residents live in smaller agricultural communities or dispersed rural settings where access to emergency services, healthcare, and public transportation is limited—factors that increase vulnerability to climate hazards like wildfire, extreme weather, and flooding.

Disability status

Residents with disabilities face heightened vulnerability to climate hazards, particularly during emergency events. Among county residents:

- 8.7% report cognitive difficulty
- 7.4% report ambulatory difficulty
- 6.1% report independent living difficulty
- 4.5% report hearing difficulty
- 3.7% report self-care difficulty
- 3.2% report vision difficulty

Primary language

Over 23% of Chelan County residents report Spanish as the language spoken at home. The prevalence of non-English speakers is highest in the agricultural portions of the county, where Spanish is the primary language for many residents and farm workers. This population may face

DRAFT

barriers to accessing emergency information, resources, and public engagement opportunities that are available only in English. All public engagement materials for this planning process were made available in both English and Spanish.

Housing tenure

Renters typically have less control over the physical condition of their housing and may face greater difficulty making energy efficiency improvements or weatherization upgrades.

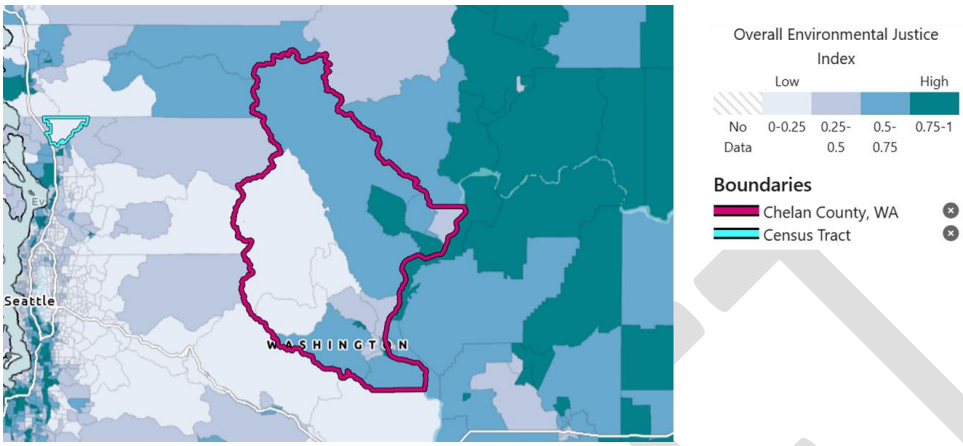
- 65.3% of housing units are owner-occupied
- 34.7% are renter-occupied

Environmental Health Disparities

The Washington Department of Health's Environmental Health Disparities (EHD) Map provides a census-tract-level picture of how environmental burdens, socioeconomic factors, and sensitive population characteristics overlap across the county. Key findings relevant to this assessment include:

- **PM2.5 concentration:** Particulate matter, including wildfire smoke, presents a greater burden in the more populated areas of the county, where higher concentrations of residents face respiratory health risks during smoke events.
- **Ozone concentration:** Ozone concentration presents a greater burden across the entire county, affecting air quality and respiratory health broadly.
- **Proximity to risk management plan facilities:** Burden is moderate to high in the southern and eastern portions of the county, where industrial facilities are located.
- **Proximity to hazardous waste storage/disposal:** Burden is moderate to high in the southeast portion of the county.
- **Primary language not English:** The predominance of non-English speakers is highest in the agricultural portions of the county, overlapping with areas of high farm worker concentration and outdoor occupational exposure.
- **People of color:** All areas of Chelan County are racially diverse, which creates the potential for climate-related environmental justice concerns throughout the county.
- **Populations living in poverty:** Poverty levels are moderate to high across the entire county, with the highest levels in the south and east areas that may also face elevated flood and wildfire exposure.

These overlapping vulnerabilities reinforce the importance of ensuring that actions and resources reach the populations with the greatest need.



Environmental Justice Index

The Environmental Justice Index (EJI) is a national, place-based tool developed by the Centers for Disease Control and Prevention (CDC) and the Agency for Toxic Substances and Disease Registry (ATSDR) to measure the cumulative impacts of environmental burdens on human health. In Chelan

DRAFT

County, the EJI highlights specific, localized vulnerabilities, with higher environmental and health burdens typically concentrated in the lower-elevation, heavily agricultural, and urbanized areas near the Wenatchee and East Wenatchee corridors (Ecology, 2025).

Exhibit 1 Environmental Justice Index for Chelan County (ATSDR, No Date)

Key Assets and Industries at Stake

The following categories of community assets and economic sectors face significant exposure to climate impacts and are analyzed in detail in the

DRAFT

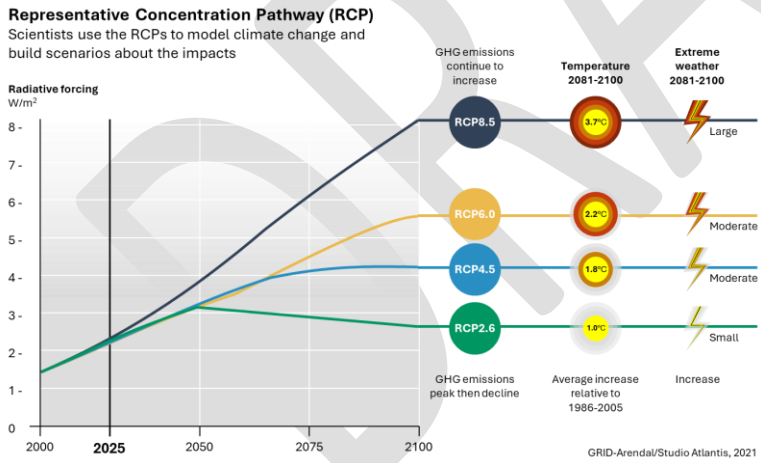
Climate Hazard Assessment:

- Agriculture dependent on irrigation supplied by surface water, including orchards, vineyards, and ranches
- Agriculture-related businesses, including fruit processing, cold storage, and equipment supply
- Hydroelectric generation and power infrastructure
- Transportation networks, including roads, bridges, and culverts vulnerable to flooding and heat/cold damage
- Water supply systems and irrigation infrastructure dependent on snowpack
- Residential and farm worker housing vulnerable to flooding, wildfire, and extreme weather
- Public and commercial buildings, schools, and medical facilities
- Cultural sites and resources of significance to Indigenous communities
- Sensitive aquatic and terrestrial habitats, including salmonid-bearing streams, wetlands, shrub-steppe, and forest ecosystems
- Tourism, recreation, and the businesses that depend on these industries
- Emergency services, communications infrastructure, and public safety facilities

DRAFT

Climate Hazard Assessment

Planning Horizon and Greenhouse Gas Scenarios



This assessment analyzes climate impacts across two primary timeframes:

- **Near-term (2020–2049):** The period most relevant to near-term capital investments, land use decisions, and policy development.
- **Mid-term (2050–2079):** The horizon for longer-range infrastructure and planning decisions.

Climate projections are drawn primarily from the **Climate Mapping for a Resilient Washington (CMRW)** webtool, which the Washington State Department of Commerce recognizes as a source of best-available science and scientifically credible projections. This assessment uses the **higher greenhouse gas scenario (RCP 8.5)** as the primary planning scenario. The higher and lower scenarios (RCP 8.5 and RCP 4.5) do not differ significantly prior to 2050, making RCP 8.5 the more appropriate planning scenario for the near-term period. RCP 8.5 also represents conditions consistent with current global emissions trajectories and provides a more conservative foundation for infrastructure and policy decisions.

Additional data sources are described below and listed in full in Appendix B: Primary Information Sources.

Exhibit 2 Representative Concentration Pathways

Primary Data Sources

The following primary sources informed the climate hazard analysis:

UW Climate Mapping for a Resilient Washington (CMRW): Climate projections database covering 11 sectors and providing indicators for Chelan County across temperature, precipitation, snowpack, streamflow, and fire conditions.

DRAFT

Washington Department of Health Environmental Health Disparities Map: Census-tract-level data on environmental burdens and population vulnerability.

NOAA National Centers for Environmental Information (NCEI): Historical climate data, severe weather records, and federal disaster declarations.

FEMA National Risk Index: Community-level risk data for 18 natural hazards.

Western Regional Climate Center (WRCC): Historical climate data for the western United States.

CDC Social Vulnerability Index: Place-based index identifying communities experiencing social vulnerability.

First Street: Property-level wildfire and flood risk data and projections.

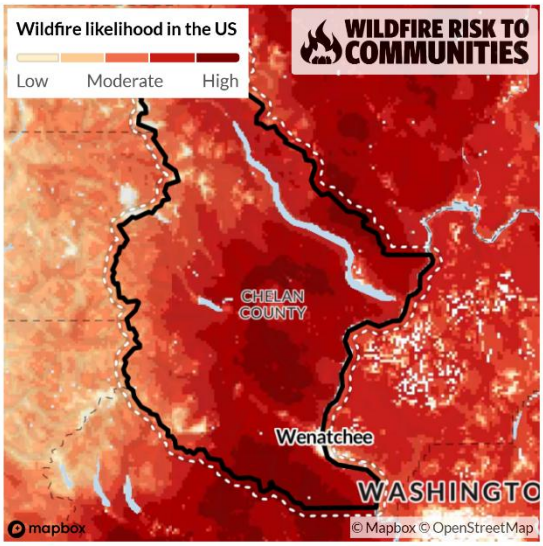
Wildfire Risk (USDA Forest Service): Community-scale wildfire risk maps and planning tools.

2024 Chelan County Hazard Mitigation Plan: County-specific hazard data, historical event records, and risk assessments approved by FEMA on December 6, 2024.

2025 Chelan County Community Wildfire Protection Plan: Wildfire risk assessment and mitigation strategies adopted by the Board of County Commissioners on March 31, 2025.

Wildfire and Wildfire Smoke

Historical Conditions



Chelan County experiences up to 70 wildfire ignitions each year (Chelan County, 2024), with an average of 1–6 major wildfires. The county has seen devastating fire seasons in recent years. In September 2025 alone, five fires started from dry lightning.

The 2023 Community Greenhouse Gas Inventory found that wildfire accounted for approximately 59% of the county's total local greenhouse gas emissions—far exceeding all other emission sources combined. From 2016 to 2024, annual wildfire emissions averaged approximately 1.44 million MT CO_2e, with 2018, 2021, 2022, and 2024 all exceeding 1.5 million MT CO_2e (Parametrix, 2025). More information on wildfire emissions can be found in the Greenhouse Gas Inventory.

Exhibit 3 Wildfire Likelihood and Risk to Homes (USDA Forest Service, 2026)

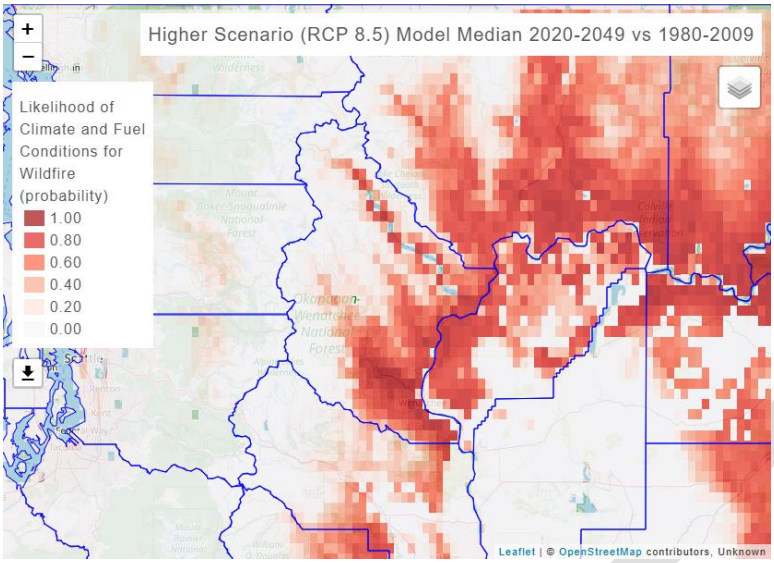
Wildfire Risk to Homes in Chelan County, WA

Selected place Risk calculation area

County line State line



Sources: USDA Forest Service. Wildfire Risk to Communities v2. 2026.

Projected Future Conditions

Building on an already active fire history, the county can expect more frequent and severe wildfire conditions in the coming decades:

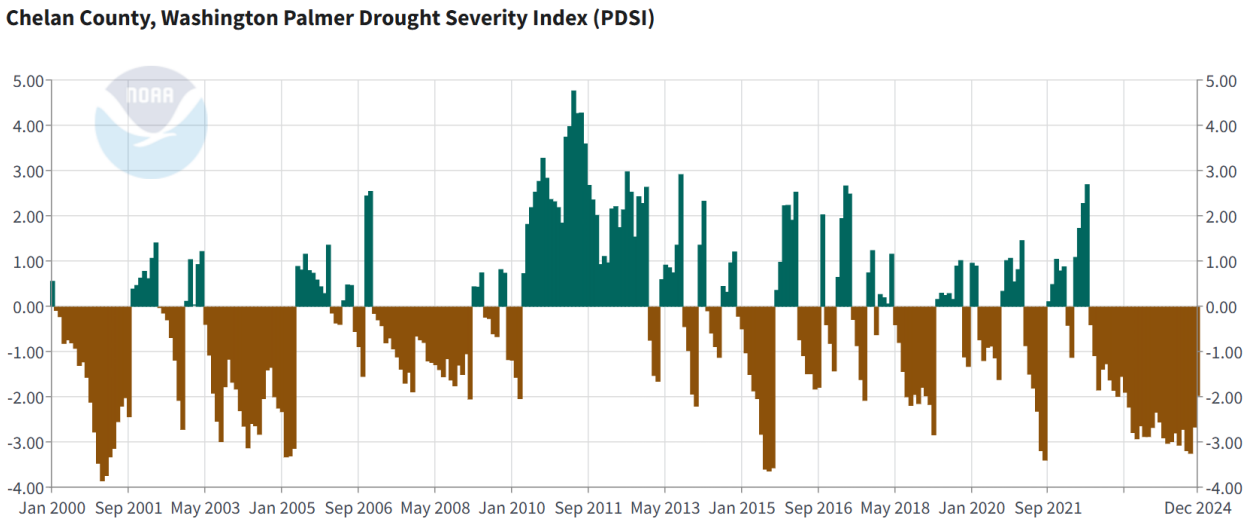
- Up to a 100% chance that any given year (2020–2049) will have climate and fuel conditions favorable for wildfire (Raymond & Rogers, 2022)
- Up to 20% more high fire days in some areas of the county (Raymond & Rogers, 2022)
- Up to 201 dry days per year, with up to 31 consecutive dry days (NOAA, No Date)
- The number of smoke days is projected to increase across the county, exacerbated by smoke from other states and Canada
- More unpredictable weather patterns can increase winds that spread fires and embers, accelerating fire behavior
- 99% of properties in Chelan County are at risk of wildfire over the next 30 years (First Street, 2026)

Exhibit 4 Wildfire Likelihood 2020-2049, RCP8.5 (Raymond & Rogers, 2022)

Implications for Chelan County

Hot, dry spells create the highest fire risk, and increased temperatures and drought intensify wildfire danger by warming and drying out vegetation. As climate changes fuel loads and moisture conditions, the landscape's susceptibility to wildfire changes as well. Development in the wildland-urban interface increases both wildfire potential and the probability of fire starts. Faster-moving fires are more likely to expand into residential neighborhoods. The risk to human health, especially for vulnerable and exposed populations, will increase as the county faces more smoke days. Agricultural producers face crop damage, market disruption, and labor challenges during active fire and smoke events. Wildfire smoke also disrupts tourism, recreation, and outdoor events. Natural ecosystems, including wildlife habitats, watersheds, and culturally significant sites, face recurring damage.

Drought and Snowpack Decline



Historical Conditions

Chelan County has experienced significant and measurable changes in snowpack over the past several decades. Between 1955 and 2016, spring snowpack in the Cascades declined by an average of approximately 30% (Roop, 2020). In Chelan County and other parts of the Cascades, declines ranging from 50% to 60% have been recorded since the 1950s. Extreme drought (D3) conditions have affected Chelan County in 8 of the last 25 years (2000–2025).

The county faces a probability of more than one drought occurrence per year. Drought conditions threaten forested and grassland areas, drive up water demand, and stress both agricultural producers and natural ecosystems.

Exhibit 5 Palmer Drought Severity Index for Chelan County (Drought.gov, No Date)

DRAFT

Projected Future Conditions

Looking ahead, drought and snowpack decline are expected to intensify (Raymond & Rogers, 2022):

- A 20% annual chance of snowpack drought on average, with some areas of Chelan County facing a 100% likelihood in any given year
- Up to a 37% chance of a summertime precipitation drought in any year
- Some parts of the county may experience up to 18% less late summer precipitation
- More streamflow will occur in winter and early spring rather than the summer months, changing the availability of surface water historically relied upon for irrigated agriculture and hydropower

Exhibit 6 Projected Change to April 1st Snow Water Equivalent (Climate Toolbox, No Date)

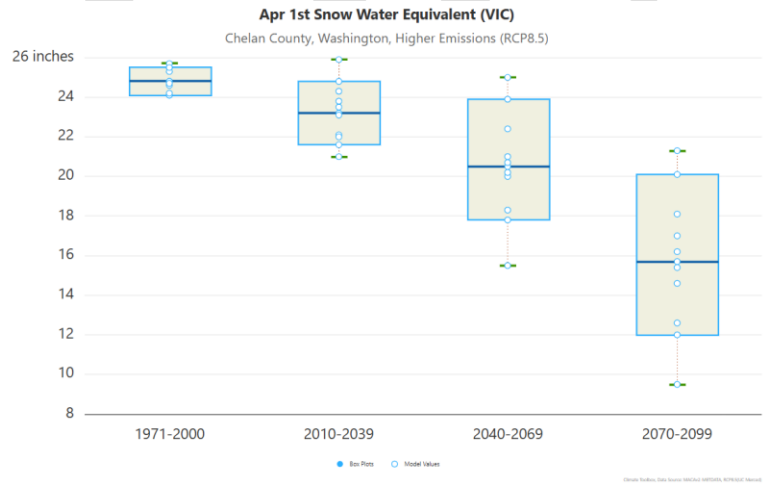


Exhibit 7 Projected Change to Spring Snow Water Equivalent (Climate Toolbox, No Date)

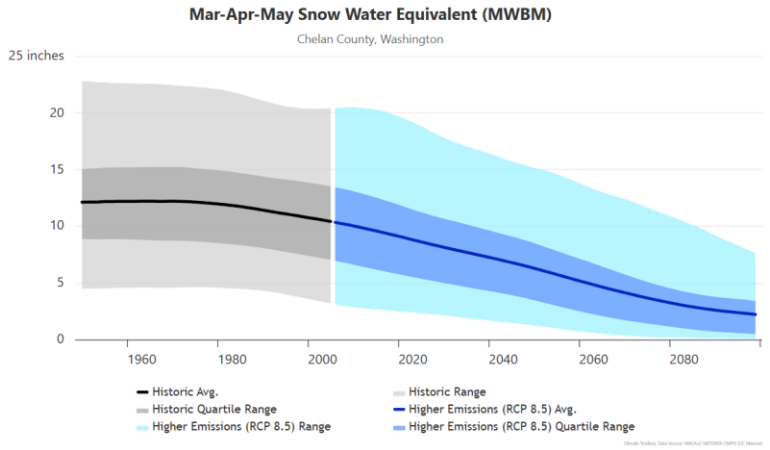

Exhibit 8 Map of Projected Change to April 1st Snow Water Equivalent (Raymond & Rogers, 2022)

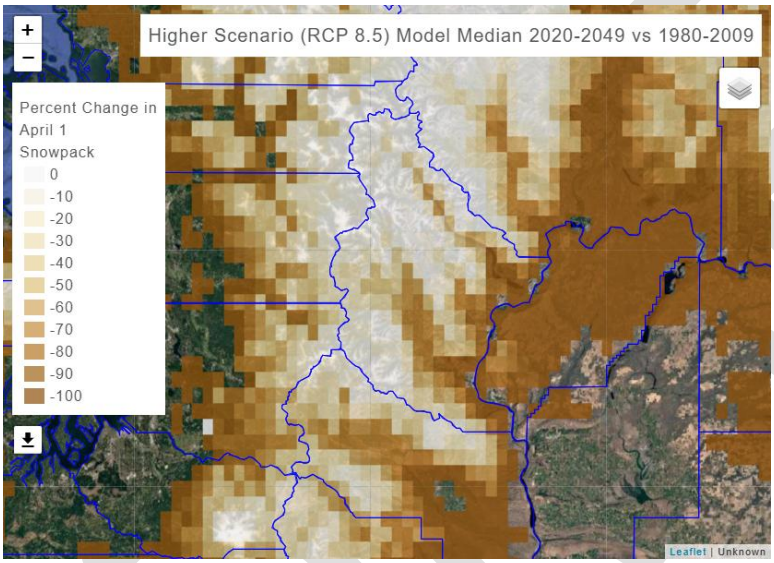

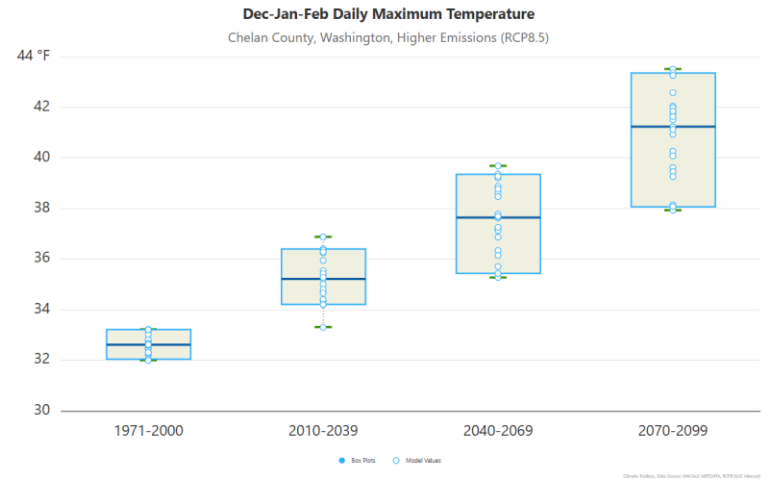

Exhibit 9 Project Change to Winter Daily Maximum Temperature (Climate Toolbox, No Date)

Implications for Chelan County

The shift in snowpack and streamflow timing has cascading consequences across the county's economy and ecology. Irrigated orchards and farms dependent on surface water supplied by snowmelt face increased water scarcity during peak growing season demand. Hydropower production capacity at PUD facilities may decrease as river flows decline and timing shifts. Freshwater temperatures may rise, increasing mortality of salmonids and other aquatic species. Groundwater recharge is projected to be offset by precipitation droughts during summer months. The growing potential for heat stress on crops, greater pest survival rates, and increased irrigation demand further compound the agricultural challenge.

Extreme Temperatures and Severe Weather

Historical Conditions

Over a 55-year period, Chelan County has experienced 153 severe weather events, averaging 2–3 per year (Chelan County, 2024). Common event types include thunderstorms, hail, wind, and winter-related events. Between 1953 and 2023, the county experienced seven severe storm-classified federal disaster or emergency declarations. The current average cooling degree-day baseline for Chelan County stands at 444—a measure of air-conditioning demand that will grow substantially under warmer conditions (NOAA, No Date).

Exhibit 10 Cooling and Heating Degree Day Averages (NOAA, No Date)

	CDD Long-term Average (1981-2010)	HDD Long-term Average (1981-2010)
Wenatchee, WA US	841	5444
Leavenworth 3 S, WA US	444	6559
Chelan, WA US	684	5865
Entiat Fish Hatchery, WA US	460	6245
Plain, WA US	169	7223
Holden Village, WA US	61	8791
Stehekin 4 NW, WA US	455	6474
County Average	444.8571429	6657.285714

Projected Future Conditions

- Summer maximum temperatures in some parts of the county may increase by up to 5.2°F (Raymond & Rogers, 2022)
- Demand for air conditioning is projected to more than double during mid-century (Raymond & Rogers, 2022)
- Frequency and duration of heatwaves will increase
- More unpredictable storms and severe weather events, including wind, are projected

Exhibit 11 Days with a Maximum Temperature above 86 ℉ (Climate Toolbox, No Date)

DRAFT

Implications for Chelan County

Extreme heat poses direct risks to human health, particularly for outdoor agricultural workers, elderly residents, unsheltered individuals, and those without access to adequate cooling. The urban heat island effect will intensify in areas that lack shade and tree coverage. Heat stress on crops and increased pest survival rates threaten agricultural productivity. Power infrastructure—designed primarily for winter peak loads—faces growing strain from summer cooling demand, and extreme heat can slow maintenance and restoration efforts. Roads and bridges are vulnerable to heat-related damage, while freeze-thaw cycles also degrade pavement and structure integrity.

Extreme Precipitation and Flooding

Historical Conditions

Chelan County has received six presidential disaster declarations for flooding since 2000 including the December 2025 storm. Large, damaging floods typically occur every 2–5 years. Flash flooding occurs regularly, especially in the county's steep canyon areas where rapid runoff and debris flows are common. Areas that have been recently burned by wildfire face elevated flash flood risk due to the loss of ground cover and the accumulation of loose debris. December 2025's Pineapple Express atmospheric river caused record-setting rainfall and subsequent damage across the county. Rapid snowmelt, severe flooding, and dangerous mudslides impacted communities including Wenatchee, Leavenworth, Cashmere, and Stehekin.

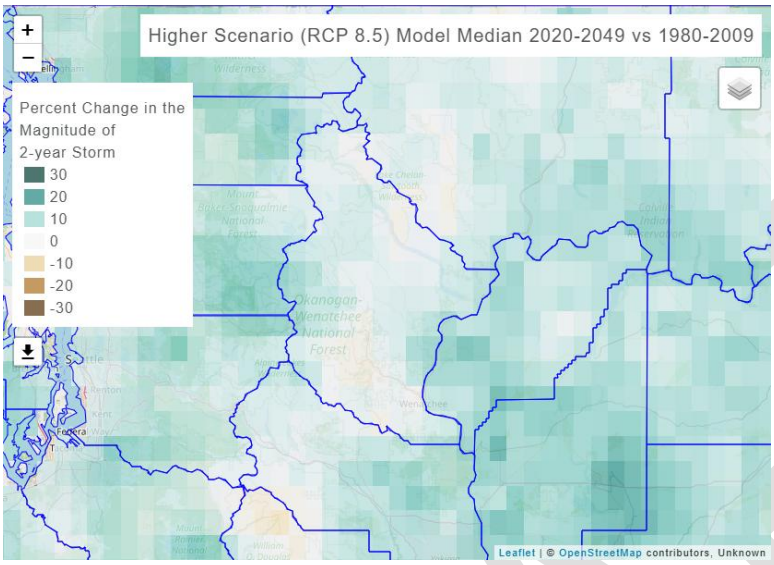
Projected Future Conditions

- Peak streamflow in Chelan County rivers and streams is anticipated to increase 7–30% by mid-century (Raymond & Rogers, 2022)
- The likelihood of a 2-year storm event rises to 11% by mid-century (Raymond & Rogers, 2022)
- Up to 63% of rivers and streams may flood more frequently (Raymond & Rogers, 2022)

DRAFT

- Precipitation and runoff patterns are changing, increasing uncertainty for water supply, flood management, and ecosystem functions
- Atmospheric rivers are predicted to become longer, wider, and more intense

Exhibit 12 Change in 2-Year Storm Magnitude, 2020-2049 RCP8.5 (Raymond & Rogers, 2022)



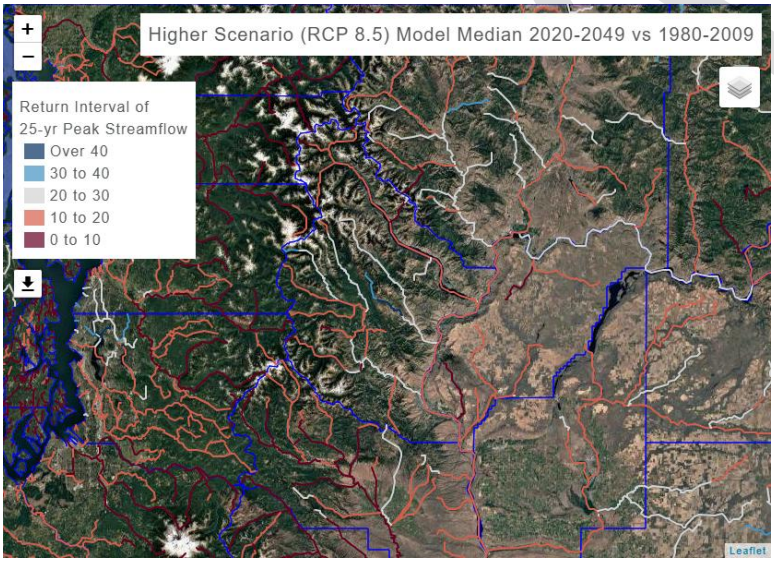


Exhibit 13 Change in 25-Year Return Interval, 2020-2049, RCP8.5 (Raymond & Rogers, 2022)

Implications for Chelan County

Flooding threatens a wide range of county assets. Seventy-three county-owned bridges—including ten identified as scour critical—are located in floodplains, increasing their risk during storms. Steep canyons and canyon mouths throughout the county are at elevated risk of flash flooding and debris flows. Development in floodplains reduces natural water storage capacity and increases runoff. Natural, historic, and cultural resources in floodplain areas are repeatedly exposed to flooding. Infrastructure, including stormwater and sewer, faces flood damage risks. Communities including

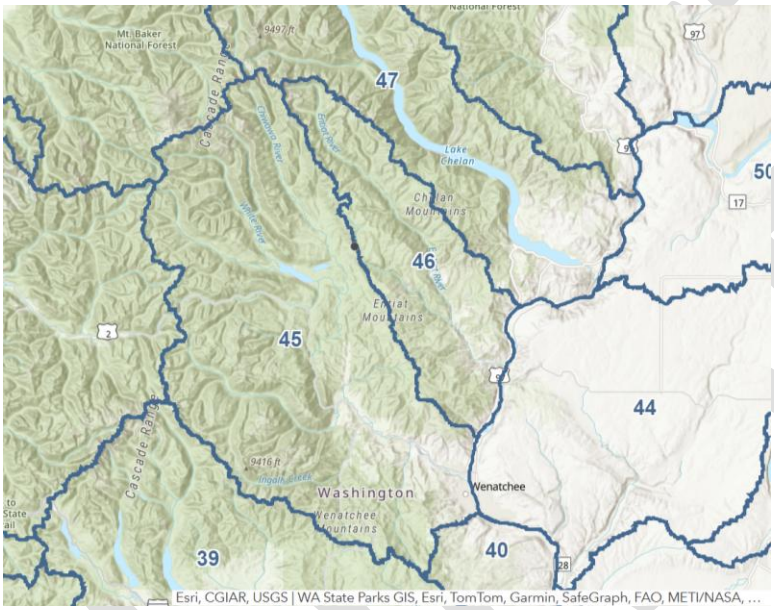
Cashmere, Leavenworth, and Wenatchee face the highest cumulative flood exposure. Increases in impervious surfaces—roads, buildings, and paving—continue to amplify flood risk during heavy rainfall events.

DRAFT

Asset Inventory and Climate Impacts

The following matrix summarizes the 16 asset categories analyzed in this assessment and the climate hazards to which each is exposed. An "X" indicates that the asset category was found to be exposed to climate change exacerbated impacts from that hazard.

Asset Categories	Drought & Snowpack Loss	Extreme Temps	Flooding & Precipitation	Wildfire & Smoke
Orchards, ranches, vineyards, and other food producers	X	X	X	X
Agriculture-related businesses (fruit processing, storage, equipment suppliers)	X	X	X	X
Power infrastructure (transmission lines, substations), hydroelectricity, natural gas system	X	X	X	X
Emergency radio and radio communications, other communication systems		X	X	X
Commercial buildings & businesses, county buildings, medical facilities, schools, churches, community centers, historical buildings		X	X	X
Cultural sites, culturally significant activities	X	X	X	X
Recreation areas, tourism, fairgrounds, open spaces, parks	X	X	X	X
All sensitive aquatic and terrestrial species and habitats, including waterways, water bodies, wetlands, shrub-steppe, ESA, forest ecosystems	X	X	X	X
Sheriff Department, Fire Stations, Emergency Management		X	X	X
Community members, vulnerable populations, visitors, farm workers	X	X	X	X
Transportation infrastructure including roads, sidewalks/pathways, bridges/culverts		X	X	X
Waste hauling, waste management, recycling			X	X
Water supply, water infrastructure, irrigation infrastructure	X		X	X
Sewer and wastewater infrastructure, stormwater infrastructure			X	X
Industrial land, undeveloped land, LAMIRDs			X	X
Residential buildings, farm worker housing		X	X	X



DRAFT

Natural Resources

Sensitive Aquatic and Terrestrial Species and Habitats

Description: This category includes waterways, water bodies, wetlands, shrubsteppe habitat, riparian habitat, ESA-listed species and state priority species and their habitats, and forest ecosystems throughout Chelan County. Chelan County contains the Wenatchee, Entiat, Lake Chelan, and Stemilt-Squilchuck watersheds, defined as WRIA 45, 46, 47, and 40A, respectively. Many of these habitats hold deep cultural significance for Native American communities, particularly the Yakama Nation, whose ceded lands include Chelan County, the Confederated Tribes of the Colville Reservation, and Wenatchi-P'Squosa people.

Exhibit 14 Map of Water Resource Inventory Areas (WA Ecology, No Date)

Climate Hazards: Wildfire and Wildfire Smoke, Drought and Snowpack Decline, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Development pressure in and adjacent to sensitive habitat areas, invasive species, historic land use changes, and agricultural water withdrawals increase baseline vulnerability.

Consequences: Non-irrigated ecosystems and riparian communities are highly sensitive to decreased precipitation, streamflow, and increased temperatures. Drought and snowpack loss threaten habitat complexity and species survival—particularly for aquatic species and migratory fish—while promoting the spread of invasive species over native flora and fauna with low adaptive capacity. Earlier spring snowmelt and changes in streamflow timing may alter migration timing and survival rates for salmonids. Flooding can introduce pollutants into rivers and soils, disrupt natural stream courses, and endanger critical habitats and life stages of fish. Lower stream flows and increased temperatures can increase fish mortality.

Existing Adaptive Measures: The county manages the impacts of development on riparian and upland habitat through the critical areas ordinance and Shoreline Management Program. Collaborative efforts in watershed planning, such as the Icicle Strategy, identify and support multiple-benefit projects. Organizations such as the Cascadia Conservation District, Cascade Fisheries, and the Yakama Nation are implementing habitat restoration and enhancement projects. Active habitat projects include the Peshastin Fishway, Cashmere Pond, and Nason Creek Oxbow. Local fish hatcheries support salmonid populations. The Voluntary Stewardship Program supports conservation of agricultural land with habitat value.

Cultural Sites and Culturally Significant Activities

Description: Riparian areas, culturally significant sites, and sensitive habitats including Stehekin, The Icicle, Peshastin Pinnacles, Lake Chelan, the Wenatchee Foothills, and Mission Ridge. This category includes archaeological sites, historic structures, and activities such as tribal fishing, gathering of culturally important plants, and traditional land stewardship.

Climate Hazards: Wildfire and Wildfire Smoke, Drought and Snowpack Decline, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Development pressure, recreational overuse, limited resources for site documentation and monitoring, and the inherent irreplaceability of cultural resources increase vulnerability.

Consequences: Drought, reduced streamflow, snowpack loss, and changing water temperatures stress plant and animal species (such as huckleberry, balsamroot, and deer) and impact salmonid migration and tribal fishing. Extreme weather events increase the risk to archaeological sites and historic structures, particularly those in floodplains. Wildfire can damage or destroy irreplaceable cultural sites and disrupt traditional gathering and fishing activities.

Existing Adaptive Measures: Locations managed by local, state, or federal agencies—such as the Leavenworth National Fish Hatchery, Peshastin Pinnacles State Park, and Cashmere Museum—would benefit from adaptive management protocols. Tribal Nations maintain their own stewardship practices and have deep traditional ecological knowledge. More natural, undisturbed sites often have lower institutional adaptive capacity and may benefit from partnerships with Tribal Nations, conservation organizations, and county agencies. The 2025 Community Wildfire Protection Plan and the 2024 Hazard Mitigation Plan both identify cultural resource protection as a priority. New development, especially those occurring on undisturbed sites and areas with a high likelihood of encountering cultural sites, are often required to conduct a cultural resources study prior to ground disturbance activities.

Water Supply, Water Infrastructure, and Irrigation Infrastructure

Description: This category includes municipal water systems, rural domestic water systems, groundwater wells, surface water diversions, irrigation canals and ditches, dams and reservoirs, and the broader network of infrastructure that delivers water to farms, homes, and businesses

DRAFT

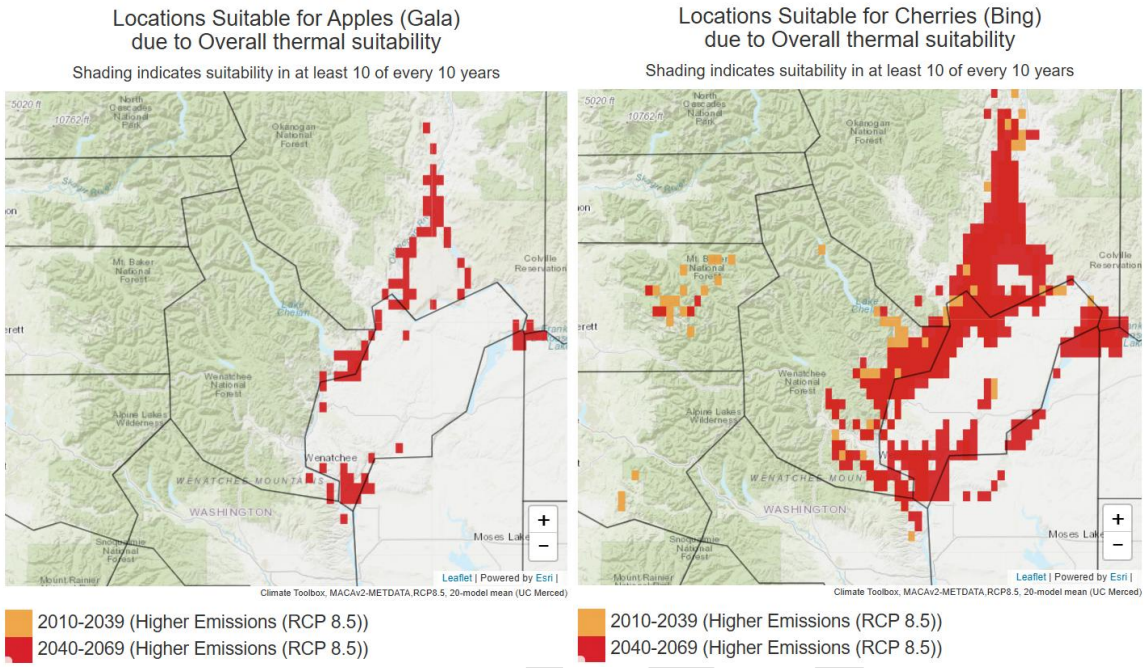
throughout Chelan County. These water systems are managed by major irrigation districts in the Wenatchee, Entiat, Lake Chelan, and Stemilt-Squilchuck watersheds, cities, water associations, special purpose districts, and private owners. The county's surface and groundwater supply are fundamentally dependent on snowpack accumulation in the Cascades and the timing and volume of spring and summer snowmelt.

Climate Hazards: Wildfire and Wildfire Smoke, Drought and Snowpack Decline, Extreme Precipitation and Flooding

Non-Climate Stressors: Aging infrastructure, population growth, increasing agricultural and industrial (e.g., datacenter) water demand, limited storage, groundwater depletion, inefficient water use, and competing water rights increase baseline vulnerability. The county's aging irrigation systems were built decades ago and were not designed to accommodate changes in the timing of snowmelt and increased winter rainfall.

Consequences: Water supply is among the most fundamental and far-reaching climate vulnerabilities in Chelan County. Reduced snowpack and earlier snowmelt will shift peak water availability to late winter and early spring, creating critical shortages during the summer months when agricultural and municipal demand is highest. Irrigation reservoirs designed to capture the slowly melting snowpack do not have sufficient storage to capture heavy winter rainfall and save it for late season irrigation needs. Groundwater recharge may increase in wet years but is offset by increased evapotranspiration and precipitation droughts. Flooding can damage dams and water intake structures, contaminate surface water supplies and wells, and breach irrigation canals. Post-wildfire runoff introduces sediment, ash, and debris into surface water sources, degrading water quality, overwhelming water treatment plants, and damaging intake infrastructure. Rising water temperatures threaten the suitability of surface water for both human consumption and aquatic ecosystems.

Existing Adaptive Measures: Chelan PUD's Vision 2075 initiative includes water resource planning and adaptation strategies for hydroelectric operations. Cities are updating and implementing water conservation programs. Local irrigation districts have begun evaluating system efficiency upgrades. The Washington State Department of Ecology administers water rights and has programs supporting water use efficiency. The USDA Natural Resources Conservation Service (NRCS) offers financial assistance for irrigation efficiency improvements through programs such as the Environmental Quality Incentives Program (EQIP). Some water purveyors have developed drought contingency plans.



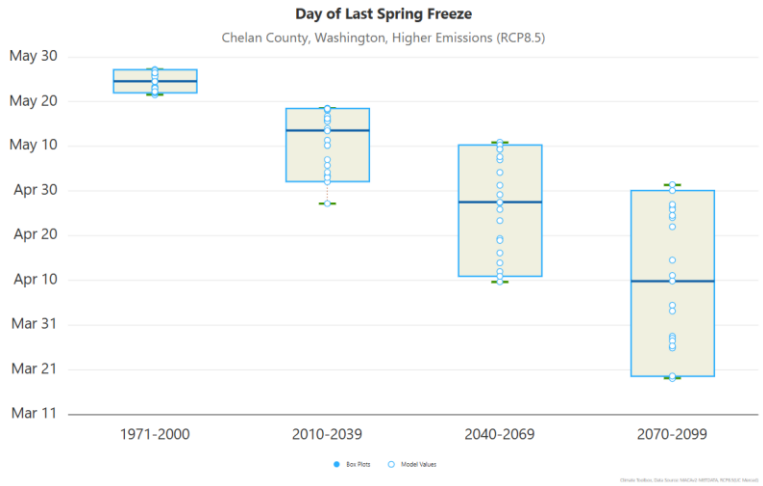
Agriculture and Economy

Orchards, Ranches, Vineyards, and Other Food Producers

Description: Chelan County's agricultural landscape is defined primarily by tree fruit—apples, pears, and cherries—grown on irrigated orchards throughout the Wenatchee, Chelan, and Entiat valleys. The county is one of the top pear- and apple-producing counties in the nation. Ranches, vineyards, and specialty crop producers round out a diverse agricultural economy that supports

thousands of direct and indirect jobs and defines the cultural identity of many communities in the county.

Exhibit 15 Projected Changes in Land Suitability for Gala Apples and Bing Cherries (Climate Toolbox, No Date)



Climate Hazards: Wildfire and Wildfire Smoke, Drought and Snowpack Decline, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Labor availability and cost, market consolidation in the fruit industry, land conversion to non-agricultural uses, aging orchard infrastructure, and rising input costs all increase financial stress on agricultural producers and reduce their ability to invest in adaptation.

Consequences: Drought and snowpack decline directly reduce the water available for irrigation at the time it is most needed. Extreme heat during bloom or harvest can reduce fruit quality and yield, while late spring frosts—which may become more variable—can destroy entire harvests. Reduced chill hours (cold temperatures in winter needed for fruit tree dormancy) already pose a growing challenge for tree fruit producers and will worsen significantly as winter temperatures rise. Flooding can inundate orchards, deposit sediment, and damage farm roads and infrastructure. Hailstorms can bruise tree fruit. Wildfire smoke can interfere with fruit photosynthesis, affecting fruit flavor, market access, and labor productivity. Farm workers who perform outdoor labor face severe heat and smoke exposure, creating health risks and labor availability challenges. Agricultural insurance costs are rising, and some producers report difficulty obtaining coverage for climate-related losses.

Exhibit 16 Projected Change in Last Day of Spring Freeze (Climate Toolbox, No Date)

Existing Adaptive Measures: Some producers have begun planting lower-chill-hour variety trees as a proactive adaptation strategy. Irrigation efficiency upgrades, including drip irrigation, have been adopted on some operations. The Cascadia Conservation District and WSU Extension provide technical assistance on irrigation management, soil health, and crop adaptation. USDA NRCS and EQIP programs support conservation practices on agricultural lands. Evaporative coolers and fans are used on some operations to reduce heat stress on workers and crops. The Voluntary Stewardship Program supports conservation alongside agricultural production.

Agriculture-Related Businesses

Description: This category includes the broader network of businesses that support agricultural production and the farm-to-market supply chain: fruit packing and processing facilities, cold storage warehouses, agricultural equipment suppliers, crop consultants, farm labor contractors, and related service providers. Many of these businesses are located in or adjacent to the agricultural valleys and are themselves exposed to climate hazards, while also experiencing indirect effects when farm production is disrupted.

Climate Hazards: Wildfire and Wildfire Smoke, Drought and Snowpack Decline, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Supply chain vulnerabilities, workforce availability, market competition, and dependence on continued agricultural production all affect resilience in this sector.

Consequences: When orchard production is disrupted by drought, wildfire smoke, flooding, or extreme temperatures, the downstream effects on packing sheds, cold storage facilities, and equipment dealers can be swift and significant. Processing facilities face direct exposure to flooding—many are located in lower valley areas near rivers—and may face power disruptions during extreme weather events. Smoke and heat events reduce worker productivity and increase health risks for indoor and outdoor workers alike. Cold storage facilities face increased energy costs as summer temperatures rise.

DRAFT

Existing Adaptive Measures: Many larger agricultural businesses have business continuity plans and some have invested in backup power systems. Industry associations such as the Washington State Tree Fruit Association provide resources on workforce safety and adaptation. Cold storage facilities have historically invested in energy efficiency.

Industrial Land, Undeveloped Land, and LAMIRDs

Description: This category includes industrially zoned and used land, industrial buildings, undeveloped parcels, and Limited Areas of More Intensive Rural Development (LAMIRDs)—clusters of rural development that exist outside of urban growth areas and are governed by specific development regulations under the GMA.

Climate Hazards: Wildfire, Extreme Precipitation and Flooding

Non-Climate Stressors: Development pressure in wildland-urban interface areas, inadequate fire-resistant building standards in rural areas, and aging stormwater infrastructure increase vulnerability, extent of existing impervious surfaces and stormwater facilities.

Consequences: Industrial sites located in floodplains face increasing flood risk and may store hazardous materials that pose contamination risks if flooded or burned. Undeveloped land and LAMIRDs in wildland-urban interface areas face elevated wildfire risk, and development in these areas can increase ignition potential and complicate evacuation. Impervious surface associated with industrial and commercial development increases stormwater runoff, and more intense precipitation may overwhelm stormwater systems and downstream flood risk.

Existing Adaptive Measures: Chelan County's critical areas ordinance provides some flood protection through development restrictions in floodplains. The 2025 Community Wildfire Protection Plan addresses ignition reduction in high-risk areas. New construction and reconstruction is required to comply with the county's stormwater regulations.

Recreation and Tourism

Description: Chelan County's recreation and tourism economy draws on a rich portfolio of natural assets: Lake Chelan, the Wenatchee River, the Icicle Corridor, North Cascades wilderness, Mission Ridge Ski Area, the Bavarian Village of Leavenworth, and an extensive network of trails, campgrounds, parks, and open spaces. Visitors come for skiing, rafting, fishing, wine tasting, biking, hiking, and a wide range of seasonal events and festivals. In 2024, the county drew in almost 2.6 million visitors who contributed $675.5 million to the economy and supported 6,700 jobs, which is about 11% of the county's workforce (BERK Consulting, 2026).

Climate Hazards: Wildfire and Wildfire Smoke, Drought and Snowpack Decline, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Tourism infrastructure capacity constraints, potential water rights for recreation uses, housing availability and costs for seasonal and full-time workforce, and competition with other regional destinations all affect resilience.

DRAFT

Consequences: Reduced snowpack directly threatens winter recreation opportunities. Lower summer streamflows threaten whitewater rafting on the Wenatchee River and fishing in its tributaries. Wildfire smoke displaces visitors, cancels outdoor events, and creates negative perceptions that linger beyond the immediate fire season. Extreme heat deters some visitors from outdoor recreation and creates health risks at outdoor venues. Flooding can close parks, trails, campgrounds, and recreation facilities. Tourism-dependent businesses—lodging, restaurants, retail, and outfitters—face revenue losses that ripple through the local economy. The loss of natural scenic values due to repeated wildfire or drought stress on vegetation may have long-term effects on the county's appeal as a recreation destination.

Existing Adaptive Measures: Some recreation businesses have diversified their offerings across seasons to reduce dependence on any single activity. Tourism marketing organizations have begun developing messaging that acknowledges climate variability. Mission Ridge has explored snowmaking investments. The county and Washington State Parks have invested in recreation infrastructure resilience in some areas.

Built Environment

Residential and Farm Worker Housing

Description: This category includes single-family homes, multifamily housing, mobile homes, and farm worker housing throughout Chelan County. Approximately 14.9% of residential land is within 100-year floodplains. Farm worker housing, which may include employer-provided housing or temporary housing, mobile home parks, and informal arrangements, is often located in agricultural areas with elevated wildfire and heat exposure and may be of older construction with limited cooling capacity. Much of the county’s rural housing is in areas that already have a high (2% annual chance) to very high (>2% annual chance) wildfire probability, and more development continues in these areas (WA DNR, 2026).

Climate Hazards: Wildfire and Wildfire Smoke, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Housing affordability challenges, aging housing stock, limited financial resources to install cooling equipment, inadequate weatherization, and the vulnerability of farm workers to eviction or displacement all increase baseline vulnerability.

Consequences: Residential housing in floodplains faces increasing flood frequency, flood depth, and associated property damage. Wildfire threatens homes in the wildland-urban interface, especially those that are not constructed using fire-resistant materials and methods or that do not maintain defensible space. Extreme heat in homes without adequate cooling poses serious health risks, particularly for elderly residents, young children, and farm workers. Farm worker housing, often of lower construction quality and density, may concentrate heat exposure and smoke inhalation risks for one of the county's most climate-vulnerable populations. Mobile homes and manufactured housing are particularly vulnerable to both flooding and high winds during severe weather events.

DRAFT

Existing Adaptive Measures: FEMA's National Flood Insurance Program and private flood insurance providers offer financial protection for homeowners that are concerned about flooding or located within high-risk flood areas. The state's weatherization assistance programs support energy efficiency upgrades in lower-income housing. Some agricultural employers have invested in cooling upgrades for farm worker housing in response to state labor regulations. Outreach and educational programs teach homeowners how to reduce wildfire hazards on their homes and properties, and grant programs fund wildfire risk reduction projects. The 2024 Hazard Mitigation Plan identifies acquisition and elevation of flood-prone properties as a mitigation strategy.

All Public, Commercial, and Historic Buildings

Description: This category includes county government buildings and facilities, school buildings, medical and behavioral health facilities, libraries, houses of worship, commercial and industrial buildings, and historic structures. Historic buildings, many of which are in older downtown districts and agricultural communities, may lack the structural resilience of newer construction and face challenges in adapting to changing conditions.

Climate Hazards: Wildfire and Wildfire Smoke, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Deferred maintenance, limited capital budgets, historic preservation restrictions, and the age of many public buildings increase vulnerability. Existing impervious surfaces and stormwater system function.

Consequences: Public buildings that serve as cooling centers, emergency shelters, or medical facilities are critical to community resilience during extreme heat and smoke events—but only if they are adequately cooled, ventilated, and equipped with backup power and emergency supplies. Heavy rainfall can overwhelm stormwater systems, and flooding can cause structural damage to buildings, displace community services, and damage irreplaceable historic resources. Historic structures in floodplains face recurring exposure and may be constrained in the types of flood-proofing measures they can employ. Rising energy costs from increased cooling demand will strain public, commercial, and industrial building budgets.

Existing Adaptive Measures: Some county facilities have been designated as cooling centers and emergency shelters. The Washington State Historic Preservation Office provides guidance on climate adaptation for historic resources. Some commercial buildings have invested in energy efficiency upgrades. The county's emergency management program coordinates the activation of public facilities as emergency shelters. New construction and reconstruction is required to comply with the county’s stormwater regulations.

Power Infrastructure

Description: This category includes the electrical generation, transmission, and distribution infrastructure operated by Chelan PUD and the natural gas distribution infrastructure operated by Cascade Natural Gas Corporation. The PUD serves approximately 52,000 customers in Chelan

DRAFT

County and provides power to the regional grid through its hydroelectric facilities on the Columbia River and Lake Chelan. The PUD provides power to the Stehekin area through a hydroelectric dam on Company Creek and diesel generators. Approximately 80% of the PUD's grid mix is supplied by hydropower, with wind and solar making up approximately 6% and 2%, respectively (Chelan PUD, 2025).

Climate Hazards: Wildfire and Wildfire Smoke, Drought and Snowpack Decline, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Aging transmission and distribution infrastructure, increasing peak demand, supply chain vulnerabilities for replacement equipment, and the geographic extent of the service territory increase baseline vulnerability.

Consequences: Drought and reduced river flows directly reduce hydroelectric generation capacity at a time when demand for cooling may be surging. Wildfire can damage transmission lines, substations, and distribution infrastructure across the county's vast rural service territory. High winds accompanying severe weather events can cause widespread outages. Extreme heat and slows outdoor maintenance and restoration work by line crews and increases the risk of equipment failure. Flooding can damage substations and other ground-level infrastructure. Power outages during extreme heat events create cascading life-safety risks for vulnerable populations dependent on electric cooling, electric powered medical devices, and refrigeration. Outages during wildfire can impede evacuation and emergency response. As electric vehicle adoption and electrification of heating and cooling systems grow, the grid will face increasing demand loads that must be managed alongside climate-related generation constraints.

Existing Adaptive Measures: Chelan PUD's Vision 2075 initiative is a comprehensive long-range planning effort that explicitly addresses climate adaptation for hydroelectric operations, including water resource planning, diversification of renewable energy sources, and grid resilience investments. The PUD has invested in vegetation management along transmission corridors to reduce wildfire ignition risk. Emergency mutual aid agreements with other utilities and on-call contracts support restoration following major events.

Transportation Infrastructure

Description: This category includes roads and bridges, state highways, airports, Link Transit facilities, and supporting infrastructure such as culverts, retaining walls, and signage. Chelan County's transportation network serves a geographically large and topographically complex service area, with many critical routes traversing steep canyons, river corridors, and mountainous terrain.

Climate Hazards: Wildfire and Wildfire Smoke, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Aging infrastructure, limited capital budgets, the geographic remoteness of many roads, and the difficulty of maintaining mountainous routes all increase baseline vulnerability.

DRAFT

Consequences: Flooding poses the most acute risk to transportation infrastructure in Chelan County. Seventy-three county-owned bridges are located in floodplains, including 10 identified as scour critical—meaning they are at risk of foundation failure due to flood-driven erosion. Roads within and at the mouth of canyons are vulnerable to flash flooding, debris flows, landslides, and erosion during extreme precipitation events. Post-wildfire terrain is particularly susceptible to debris flows that can overwhelm culverts and close roads for extended periods. Extreme heat softens and expands asphalt pavement causing buckles, warps, and rutting, damages steel bridge expansion joints, and impairs the structural integrity of roads and bridges. Freeze-thaw events cause severe pavement damage like potholes by allowing trapped water to repeatedly freeze and expand. During active wildfire events, wooden bridges, signposts, and guardrail can burn and evacuation route capacity and access for emergency responders may be compromised. The loss of key roads or bridges can isolate communities, particularly in the more rural areas of the county.

Existing Adaptive Measures: Chelan County Public Works performs regular bridge inspections and has prioritized scour-critical bridges for monitoring and remediation. The county has been awarded funding from FEMA's Hazard Mitigation Assistance grant programs for infrastructure mitigation projects. Road crews have protocols for responding to flooding, landslides, and wildfire-related closures. The 2024 Hazard Mitigation Plan identifies bridge scour and road flooding as priority mitigation actions.

Sewer, Wastewater, and Stormwater Infrastructure

Description: This category includes municipal sewer systems, septic systems, wastewater treatment plants, and stormwater collection and conveyance infrastructure serving urban and rural areas of Chelan County. Many of these systems were designed and built under historical precipitation and flow conditions that are likely to change significantly.

Climate Hazards: Wildfire and Wildfire Smoke, Extreme Precipitation and Flooding

Non-Climate Stressors: Aging infrastructure, undersized stormwater systems in developed areas, and the growth of impervious surfaces all increase vulnerability to flooding and system overload.

Consequences: Increased peak precipitation events can overwhelm stormwater systems designed to historical standards, causing flooding, erosion, and infiltration that can overwhelm sewer systems. Post-wildfire runoff carries significantly higher sediment loads that may overwhelm water quality treatment or conveyance in stormwater systems. Flooding can damage or inundate wastewater treatment facilities, potentially causing the release of untreated sewage into waterways. Septic systems in floodplain areas are subject to periodic inundation, which can impair function and pose public health risks. Long dry periods followed by intense precipitation events create episodic system stress that may be difficult to anticipate and manage.

Existing Adaptive Measures: The Washington State Department of Ecology regulates wastewater treatment and provides guidance on stormwater management. New construction and reconstruction is required to comply with the county's stormwater regulations. Some jurisdictions have invested in green infrastructure and low-impact development standards. The 2017

DRAFT

Comprehensive Flood Hazard Management Plan identifies stormwater management as a key flood mitigation tool.

Emergency Radio and Communications Infrastructure

Description: This category includes the county's emergency radio communications systems, public safety answering points (dispatch), cellular infrastructure, and broadcast media. Reliable communication is foundational to emergency response, evacuation, and public safety during all types of hazard events.

Climate Hazards: Wildfire and Wildfire Smoke, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Limited redundancy in some areas, topographic barriers to radio transmission, location of facilities, increasing use of internet phone services (VoIP) for homes and businesses, and the growing demand for communications capacity during large-scale emergencies increase vulnerability.

Consequences: Wildfire, landslides, debris flows, and wind can destroy radio repeater towers, communication nodes, and cell towers located in exposed locations. Flooding can damage communications infrastructure in valley bottoms. Power outages during any hazard event disable communications systems without backup power. Radio communication dead zones in canyon areas and remote portions of the county reduce the effectiveness of emergency response. During complex, multi-day events—such as a major wildfire combined with extreme heat—communication systems face peak demand at their most stressed moments.

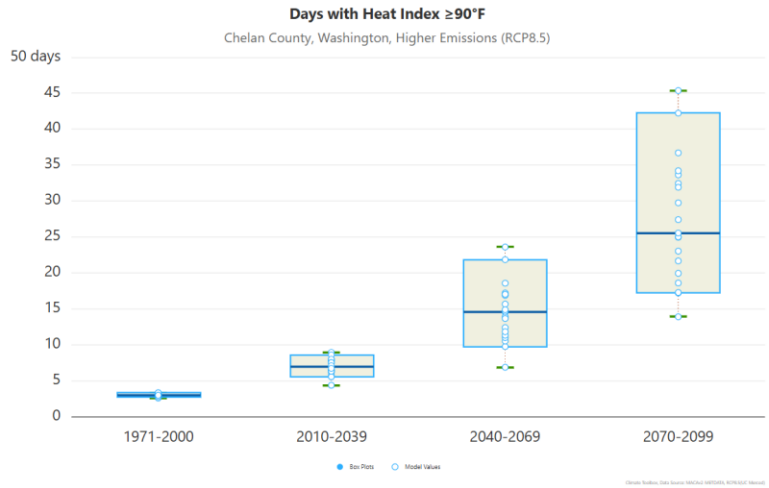
Existing Adaptive Measures: The county's emergency management program maintains backup communications systems and participates in regional emergency communications networks. The county’s emergency alert system can send messages to all cell phones within a targeted location or to all users who have signed up for the program. Some communications infrastructures have backup power provisions. The 2024 Hazard Mitigation Plan identifies communications resilience as a priority.

Community and Services

Community Members, Vulnerable Populations, Visitors, and Farm Workers

Description: This category encompasses the people of Chelan County—full-time residents, seasonal residents, visitors, and temporary workers—with particular attention to those who face the greatest barriers to protecting themselves from climate impacts. Vulnerable populations include elderly residents, children, people with disabilities or medical conditions, low-income households, people experiencing homelessness, non-English speakers, and farm workers. Farm workers represent a particularly significant and exposed population in Chelan County, given their outdoor work conditions, often limited access to cooling and medical care, and, in some cases, unstable housing and immigration status. Climate impacts on people extend beyond health and

DRAFT



safety. They extend to economic security, livelihood stability, and the long-term vitality of the communities and workforce that underpin the county's economy.

Climate Hazards: Wildfire and Wildfire Smoke, Drought and Snowpack Decline, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Poverty, social isolation, language barriers, inadequate housing, lack of health insurance, limited transportation access, dependence on medical care, and lack of awareness of available resources all increase vulnerability and reduce adaptive capacity.

Consequences: Extreme heat poses direct threats to human health, with the greatest risks for outdoor workers, elderly residents, very young children, people with chronic medical or mental health conditions, and people without access to air conditioning. Heat-related illness and death can increase dramatically during prolonged heat waves. Wildfire smoke and poor air quality caused by drought causes respiratory illness and exacerbates cardiovascular disease and other pre-existing conditions; those who cannot avoid outdoor exposure or have poor indoor air quality face the greatest risk. Flooding displaces residents and visitors from homes, campgrounds, and recreational areas, with the highest risks for those in mobile homes or older housing in low-lying high risk flood areas. Power outages during extreme heat events create life-threatening conditions for people who depend on electric medical equipment or who lack the means to seek cooling elsewhere. Evacuation during wildfire or flood events creates disproportionate challenges for people without vehicles and people with disabilities. Hazard events can reduce worker productivity, disrupt tourism-dependent livelihoods, and can force temporary business closures, with economic losses concentrated on hourly and seasonal workers who have no paid sick leave or income replacement.

Exhibit 17 Projected Number of Days with a Heat Index over 90 ℉ (Climate Toolbox, No Date)

Existing Adaptive Measures: The Chelan-Douglas Health District operates public health programs addressing heat-related illness and air quality. The county and its partners maintain a network of cooling centers and air filtration sites that are activated during extreme events. Link Transit provides

free transportation access. The 2024 Hazard Mitigation Plan addresses vulnerable population protection as a priority. Outreach in Spanish and other languages supports non-English-speaking residents. Washington State's Farmworker Heat Rule establishes workplace protections for agricultural workers.

Sheriff Department, Fire Stations, and Emergency Management

Description: This category includes the Chelan County Sheriff's Office, county fire districts and volunteer fire departments, Chelan County Emergency Management, and mutual aid partners. These agencies serve as the county's primary institutions for emergency response, evacuation coordination, and disaster recovery.

Climate Hazards: Wildfire and Wildfire Smoke, Drought and Snowpack Decline, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Volunteer firefighter recruitment and retention challenges, aging equipment, location of facilities, limited staffing in rural areas, staff capabilities, and the increasing frequency and complexity of climate-driven emergency events strain emergency service capacity.

Consequences: As changing conditions increase the frequency and severity of wildfires, floods, and extreme weather events, emergency service agencies face growing demand with limited resources. Extended and higher risk wildfire seasons mean that personnel and equipment are deployed to fire starts more frequently and for longer periods. Simultaneous or compound events—such as a wildfire occurring during a heat wave or flooding immediately following a wildfire—stretch response capacity to its limits. Evacuation coordination for large, geographically dispersed populations is increasingly complex, especially in areas with challenging terrain or limited access. Volunteer fire departments, which serve many rural areas of the county, face recruitment challenges that may worsen as the demands of firefighting increase. Emergency facilities, including fire stations, emergency operations centers, and communication hubs, must remain operational under the very hazardous conditions they are designed to manage.

Existing Adaptive Measures: Chelan County Emergency Management maintains the county's multi-hazard emergency operations plan and coordinates with state and federal partners. The county and fire districts participate in mutual aid agreements with neighboring districts, counties, and state agencies. The 2024 Hazard Mitigation Plan and 2025 Community Wildfire Protection Plan provide strategic frameworks for wildfire and flood mitigation and preparedness. Fire district training programs address wildfire behavior and protective actions. Outreach and educational programs teach homeowners how to reduce wildfire hazards on their homes and properties, and grant programs fund wildfire risk reduction projects.

Fairgrounds, Open Spaces, and Parks

Description: This category includes the Chelan County Fairgrounds, county and state parks, community forests, open space areas, recreational trails, and publicly accessible natural areas throughout the county. These assets provide community gathering space, recreation, ecological

DRAFT

services, and economic value to the tourism and recreation economy. Open spaces can provide protection from natural hazards, such as preserved floodplain and tree canopy.

Climate Hazards: Wildfire and Wildfire Smoke, Drought and Snowpack Decline, Extreme Temperatures and Severe Weather, Extreme Precipitation and Flooding

Non-Climate Stressors: Deferred maintenance, location, limited operating budgets, and increasing recreational demand all affect the resilience and capacity of these assets.

Consequences: Flooding can damage park facilities, trails, and fairground infrastructure, particularly in river-adjacent locations. Wildfire can burn through parks and open spaces, destroying vegetation, infrastructure, habitat, and cultural values, and displacing events and visitors for extended periods. Extreme heat reduces the usability of outdoor spaces during peak summer months, particularly for vulnerable populations who depend on parks and public spaces for cooling relief. The Chelan County Fairgrounds serves as an emergency staging area during disaster events and must remain accessible and operational under hazard conditions. Open spaces and parks that provide urban cooling, stormwater management, and habitat connectivity contribute to community resilience if they are maintained and expanded.

Existing Adaptive Measures: Some parks have invested in shade structures and water access to support heat resilience. The county's parks programs maintain facilities and responds to storm damage. Natural open spaces managed through conservation easements or county ownership provide long-term ecological and natural hazard resilience benefits.

Waste Hauling, Waste Management, and Recycling

Description: This category includes solid waste collection services, transfer stations, landfill operations, and recycling and composting programs serving Chelan County residents and businesses. Waste management infrastructure must remain operational during and after hazard events when debris, ash, and disaster-related waste generation spike significantly.

Climate Hazards: Wildfire and Wildfire Smoke, Extreme Precipitation and Flooding

Non-Climate Stressors: Rising disposal costs, limited landfill capacity, workforce availability, and supply chain disruptions for recycling markets all affect resilience.

Consequences: Transfer stations may be inundated during certain hazard events, disrupting waste collection and disposal services. Wildfire generates large volumes of ash, debris, and demolition waste that overwhelm normal disposal systems and Public Works resources. Post-disaster debris management is logistically complex and requires coordination among county agencies, state regulators, and private haulers. Smoke events can disrupt outdoor waste collection operations and create health risks for waste collection workers.

Existing Adaptive Measures: The county has procedures for emergency debris management in coordination with state and federal agencies. Waste Management, the county's primary hauler, has operational protocols for maintaining service during disruptions.

DRAFT

Vulnerability and Risk Assessment

Understanding where climate risks are greatest—and why—is essential for directing limited resources toward the people, assets, and systems most in need of protection. This section presents the vulnerability and risk assessment findings that form the analytical foundation for the recommended policies and actions that follow.

Methodology

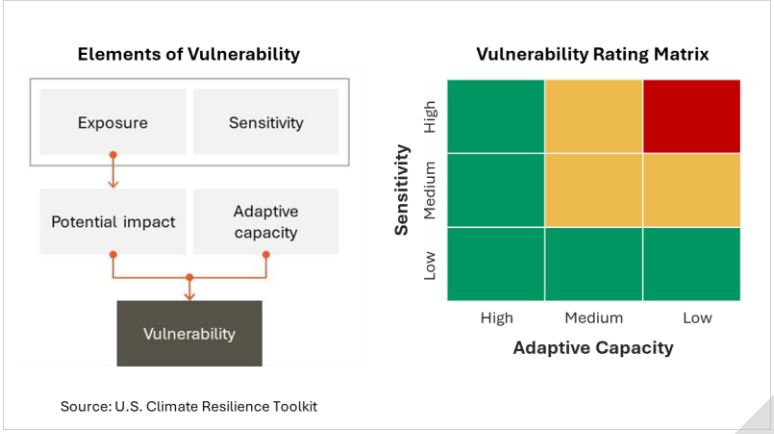
Vulnerability and Risk Frameworks

This assessment uses established frameworks to evaluate the vulnerability and risk associated with each asset-hazard pair. The assessment draws on guidance from the Washington State Department of Commerce, FEMA's Hazard Mitigation Planning methodology, and the Intergovernmental Panel on Climate Change (IPCC) framework for vulnerability assessment.

Vulnerability is evaluated as a function of three components:

- **Exposure:** The degree to which an asset is subject to a given climate hazard, based on the geographic, physical, or operational characteristics of the asset.
- **Sensitivity:** How inherently affected an asset is by a climate impact, considering characteristics such as age, condition, design standards, or socioeconomic factors.
- **Adaptive Capacity:** The ability of the asset, system, or population to adjust to changing conditions and minimize damage, drawing on governance structures, financial resources, institutional capacity, and community knowledge.

Risk is evaluated as a function of two components:

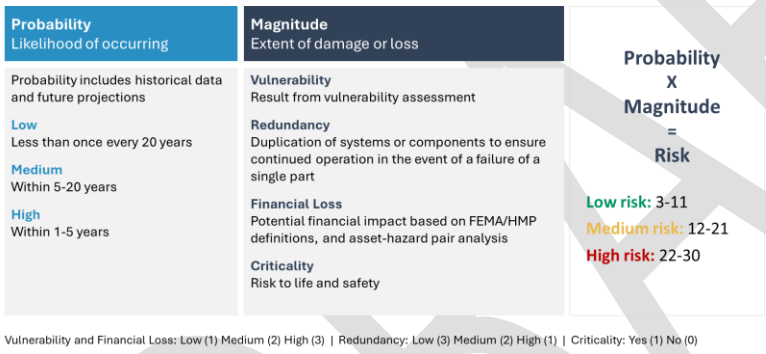


- **Probability:** The likelihood of a climate hazard event affecting the asset category, based on historical data and future projections.
- **Magnitude:** The extent of damage or loss expected if a hazard event occurs, considering vulnerability, redundancy, replacement cost, and criticality.

How vulnerability ratings were determined

Vulnerability ratings for each asset-hazard pair were determined through a structured scoring process using the following criteria:

Exhibit 18 Vulnerability Assessment Criteria



DRAFT

How risk scores were calculated

Risk scores were calculated by combining probability and magnitude ratings using a quantitative approach:

Exhibit 19 Risk Assessment Criteria

Risk categories are defined as:

- **Low Risk:** Impacts are unlikely or manageable; lower priority for immediate action.
- **Medium Risk:** Impacts are possible and could be significant; moderate planning priority.
- **High Risk:** Impacts are likely and could be severe; highest planning priority.

Relationship between vulnerability and risk

Vulnerability and risk are related but distinct concepts. An asset may be highly vulnerable but face low risk if the probability of the relevant hazard is low. Conversely, an asset with moderate vulnerability may face high risk if it is exposed to a high-probability hazard. In Chelan County, several asset categories face the combination of high vulnerability AND high probability across multiple hazards. These represent the most urgent priorities for resilience investment.

Limitations and Assumptions

This assessment is subject to the following limitations and assumptions that users should be aware of when interpreting results:

DRAFT

- **Compound and cascading impacts are not fully modeled.** This assessment evaluates asset-hazard pairs individually. The real-world interactions between simultaneous hazards—for example, a wildfire occurring during a heat wave, or a flood following a wildfire—may produce impacts greater than the sum of their parts. Compound and cascading risks, such as a power outage caused by wildfire, represent an important area for further analysis.
- **Climate projections carry inherent uncertainty.** Future climate conditions are projected based on modeled scenarios that represent a range of possible futures. This assessment uses the higher emissions scenario (RCP 8.5) as a planning tool, not a prediction.
- **Asset-level data are uneven.** Detailed condition and inventory data are more available for some asset categories (e.g., county-owned bridges) than others (e.g., farm worker housing). Vulnerability assessments for asset categories with limited data carry greater uncertainty.
- **Adaptive capacity is dynamic.** The adaptive capacity of institutions, communities, and systems will change over time as policies, priorities, investments, and social conditions evolve. Ratings reflect conditions as of the date of this assessment.
- **This assessment does not constitute site-specific engineering or environmental analysis.** Findings are intended to inform policy and planning decisions and should be supplemented with site-specific analysis for capital investment decisions.

Vulnerability and Risk Results

The following tables present vulnerability and risk ratings for each asset category and climate hazard combination identified. Asset categories are organized by theme.

Natural Resources

Asset Category	Climate Hazard	Vulnerability	Probability	Magnitude	Risk
Sensitive aquatic and terrestrial species and habitats	Drought & Snowpack Decline	High	High	High	**High**
	Extreme Temperatures	Medium	High	Medium	**Medium**
	Extreme Precipitation & Flooding	Medium	Medium	Medium	**Medium**
	Wildfire & Smoke	High	High	Medium	**Medium**
Cultural sites and culturally significant activities	Drought & Snowpack Decline	Medium	High	Medium	**Medium**
	Extreme Temperatures	Medium	High	Medium	**Medium**
	Extreme Precipitation & Flooding	Medium	Medium	High	**Medium**
	Wildfire & Smoke	High	High	High	**High**

DRAFT

Water supply, water infrastructure, and irrigation infrastructure	Drought & Snowpack Decline	Medium	High	High	**High**
	Extreme Precipitation & Flooding	High	Medium	High	**Medium**

	Wildfire & Smoke	Medium	High	Medium	**Medium**

Priority Risk Areas

The following table summarizes the highest-priority asset-hazard combinations identified through this assessment. These combinations reflect cases where both vulnerability and risk ratings are High, representing the most urgent priorities for resilience planning and investment in Chelan County.

Asset Category	**Climate Hazard**	**Vulnerability**	**Risk**	**Key Concern**
Orchards, Ranches, Vineyards, and Other Food Producers	Drought & Snowpack Decline	High	**High**	Reduced irrigation water availability during peak growing season; chill hour loss threatens tree fruit viability
	Wildfire & Smoke	High	**High**	Smoke impacts on fruit quality, labor productivity, and market access; direct fire losses
	Extreme Temperatures	High	**High**	Heat stress on crops and farm workers; bloom and harvest disruption

DRAFT

Water Supply, Water Infrastructure, and Irrigation Infrastructure	Drought & Snowpack Decline	High	**High**	Fundamental threat to water availability for agriculture, municipal use, and ecosystems
Sensitive Aquatic and Terrestrial Species and Habitats	Drought & Snowpack Decline	High	**High**	Altered streamflow, warming water temperatures, and habitat loss threatening salmonids and other species
	Wildfire & Smoke	High	**High**	Repeated fire cycles degrading watershed function, habitat, and ecosystem services
Residential Housing and Farm Worker Housing	Wildfire & Smoke	High	**High**	99% of county properties face some wildfire risk; farm worker housing concentrated in high-exposure areas
	Extreme Temperatures	High	**High**	Heat risk in inadequately cooled housing; farm worker housing density amplifies risk
Transportation Infrastructure	Extreme Temperatures	High	**High**	Pavement damage, bridge joint failure, and heat-related work restrictions
	Extreme Precipitation & Flooding	High	**High**	73 bridges in floodplains, 10 scour-critical; canyon road closures and debris flows
Power Infrastructure	Drought & Snowpack Decline	High	**High**	Reduced hydroelectric generation capacity coinciding with peak cooling demand
	Wildfire & Smoke	High	**High**	Transmission and distribution infrastructure damage; extended outages during fire events
Community Members, Vulnerable Populations, Visitors, and Farm Workers	Extreme Temperatures	High	**High**	Heat-related illness and death risk for outdoor workers, elderly, and people without cooling access
	Wildfire & Smoke	High	**High**	Respiratory health impacts; evacuation challenges for populations without transportation or language access

DRAFT

Emergency Radio and Communications Infrastructure	Wildfire & Smoke	High	**High**	Loss of communications infrastructure during events when it is most needed
Cultural Sites and Culturally Significant Activities	Drought & Snowpack Decline	High	**High**	Threats to culturally significant species, water sources, and traditional land use practices
	Wildfire & Smoke	High	**High**	Irreplaceable cultural and archaeological resources destroyed by wildfire

Summary Observations

Several cross-cutting themes emerge from the priority risk analysis:

1. **Wildfire and wildfire smoke generate high-risk ratings across nearly every asset category.** No asset group in Chelan County is immune to wildfire risk, and the combination of high probability and high magnitude makes this the county's single most pervasive climate exacerbated threat.
2. **Drought and snowpack decline threaten the foundational systems that support the county's economy and ecology.** Water is the connective tissue linking agriculture, hydropower, aquatic ecosystems, and community health. Changing water availability and timing affects virtually every other asset category.
3. **Vulnerable and underserved populations face the intersection of multiple high-risk hazards** with limited adaptive capacity. Addressing their needs is both a moral imperative and a practical prerequisite for equitable community-wide resilience.
4. **Infrastructure assets (transportation, power, and communications) face high risk across multiple hazards,** and failures in any one system cascade across others. A flood that closes a bridge, a wildfire that damages a transmission line, or a heat event that causes a power outage each sets off a chain of consequences that affects homes, businesses, emergency services, and communities.
5. **Natural and cultural resources face risks that are largely irreversible.** Unlike built infrastructure, the loss of species, destruction of habitat, and damage to cultural sites by climate exacerbated natural hazard may not be replaceable. This irreversibility warrants preventive investment.

DRAFT

Assessment of Existing Plans and Policies

The following Chelan County plans and policies were reviewed to assess the current state of climate resilience integration and identify gaps to be addressed in the 2026 Comprehensive Plan update.

Existing County Plans

2017 Chelan County Comprehensive Plan (including Resolution 2022-09)

The 2017 Comprehensive Plan provides the foundational land use and policy framework for Chelan County. As originally adopted, the plan addressed natural hazards primarily through its Critical Areas Ordinance and resource and rural lands policies, with limited explicit treatment of climate. Resolution 2022-09, adopted by the Board of County Commissioners in 2022, amended the Comprehensive Plan to incorporate climate resilience goals and policies across multiple plan elements. This amendment represented a significant step forward in integrating climate resilience into the county's planning framework and demonstrated proactive leadership ahead of the HB 1181 mandate. Key areas of strength from the 2022 amendment include recognition of wildfire risk in rural lands policies, water resource conservation language, and acknowledgment of climate impacts as a driver of hazard risk.

Gaps include: limited policy specificity for adaptation actions; limited integration with the Hazard Mitigation Plan, insufficient integration of equity and vulnerable population considerations; the absence of climate risk metrics tied to capital facilities planning; and no systematic monitoring or adaptive management framework.

2017 Comprehensive Flood Hazard Management Plan

The 2017 Comprehensive Flood Hazard Management Plan provides detailed flood risk analysis and mitigation strategies for the county's floodplains and other flood hazard areas. The plan provides a strong technical foundation for flood risk management and identifies specific properties, bridges, and infrastructure at elevated risk. Strengths include detailed floodplain mapping, identification of scour-critical bridges, and policies supporting floodplain acquisition and preservation.

Gaps include: flood risk projections based on historical data—much of which pre-dates 1980—rather than climate-adjusted future conditions; limited integration with wildfire risk in the context of post-fire flooding; and the need for updated flood frequency analysis that reflects projected increases in peak streamflow.

2021 Shoreline Management Program

The Shoreline Management Program (SMP) governs development and uses along shorelines of the state within Chelan County's, including the Columbia River, Lake Chelan, the Wenatchee River, and other water bodies meeting the state's shoreline definition. The SMP includes provisions protecting riparian habitat and function, limiting shoreline armoring, and regulating development in flood-

DRAFT

prone shoreline areas. These provisions provide meaningful co-benefits for climate resilience by protecting natural shoreline systems that buffer flooding, filter runoff, and support aquatic habitat.

Gaps include: limited explicit treatment of climate impacts on shoreline processes and habitat; the need for updated guidance on lake-level change; and opportunities to strengthen provisions supporting natural shoreline restoration and floodplain connectivity.

2024 Hazard Mitigation Plan

The 2024 Chelan County Hazard Mitigation Plan, approved by FEMA on December 6, 2024, is the county's primary planning tool for identifying and reducing risks from natural hazards. The plan covers 18 natural hazard types, with emphasis on wildfire, flooding, and severe weather. It includes detailed risk assessments, vulnerability analyses, and a comprehensive list of mitigation actions prioritized by cost-effectiveness and feasibility. The 2024 plan explicitly incorporates changing climate conditions as a factor influencing future hazard risk—a significant advancement over prior plan iterations. It identifies bridge scour, wildfire in the wildland-urban interface, and drought as top priorities.

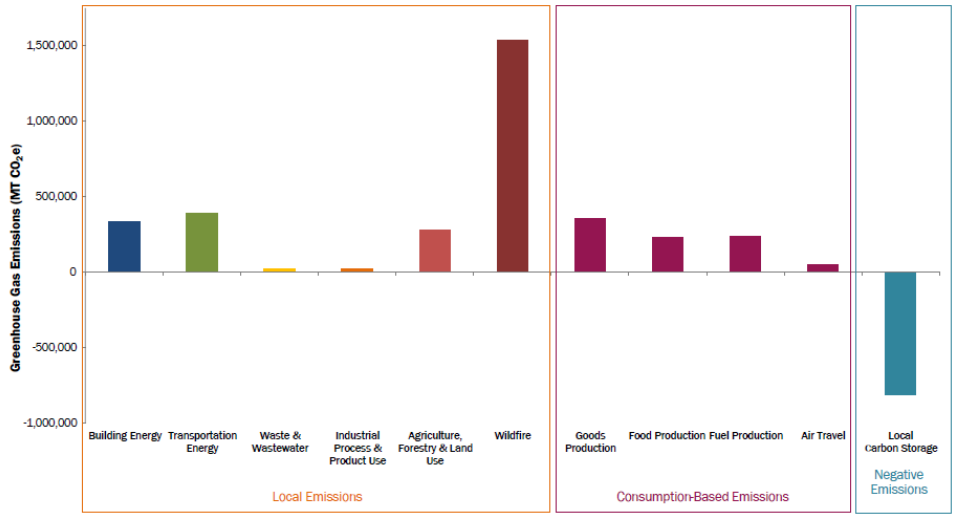
Gaps include: limited integration with land use and development planning tools; insufficient focus on vulnerable population protection in the mitigation action plan; and the need for stronger linkages between the HMP and the Comprehensive Plan to ensure mitigation actions are reflected in capital facilities planning and development regulations.

2025 Community Wildfire Protection Plan

The 2025 Community Wildfire Protection Plan (CWPP), adopted by the Board of County Commissioners on March 31, 2025, provides a strategic framework for wildfire risk reduction across Chelan County. The CWPP identifies high-risk communities, prioritizes fuel treatment areas, and recommends actions for improving structural ignitability, evacuation capacity, and community preparedness. It reflects extensive collaboration among fire districts, state and federal land management agencies, community organizations, and residents. The plan provides a current, data-driven wildfire risk assessment, identification of priority fuel treatment zones, and a strong community engagement foundation.

Gaps include: limited integration with housing policy and land use planning in the wildland-urban interface; insufficient focus on vulnerable population evacuation; and the need for sustained funding commitments to implement recommended fuel treatments and other wildfire mitigation projects at scale.

Greenhouse Gas Inventory



Summary and Key Insights

Chelan County participated in the development of a Community Greenhouse Gas Inventory published in July 2025 as part of the broader Our Valley Our Future regional initiative. The inventory

DRAFT

covers multiple emission sources across the county for the years 2016 through 2022, including electricity, natural gas, transportation, agriculture, waste, and critically, wildfire.

Exhibit 20 Summary of Greenhouse Gas Emissions by Sector (Parametrix, 2025)

Key findings include:

- **Total estimated community GHG emissions in 2022 were approximately 2.6 million metric tons of carbon dioxide equivalent (MT CO_2e)**, when wildfire emissions are included.
- **Wildfire emissions dominate the inventory.** From 2016 to 2024, annual wildfire emissions averaged approximately 1.44 million MT CO_2e, representing approximately 59% of total local emissions in the inventory baseline year. Wildfire emissions are highly variable year to year depending on the severity of the wildfire season; 2021 emissions were approximately 2.6 million MT CO_2e, while 2023 emissions were approximately 95,000 MT CO_2e.
- **Transportation is the largest non-wildfire emission source**, accounting for approximately 35% of non-wildfire emissions, followed by electricity (approximately 15%), natural gas (approximately 14%), and agriculture (approximately 10%).
- **The PUD's hydropower-dominant electricity mix results in relatively low electricity-related emissions** compared to many Washington counties, providing a significant co-benefit of the county's existing energy infrastructure.
- **Wildfire emissions from fires burning within Chelan County are largely outside the county's direct control**, but local land management practices, including fuel reduction, restoration forestry, and wildland-urban interface management, can reduce the risk and severity of fires and thereby reduce associated emissions.

DRAFT

The full Community Greenhouse Gas Inventory report is available at sustainablencw.org/climate. The wildfire emissions component of the inventory is summarized in detail in the Wildfire Emissions Supplemental Report.

The GHG inventory underscores the importance of wildfire as both a climate hazard and a significant source of emissions in Chelan County. A dynamic in which climate change drives conditions that increase wildfire risk, and wildfires in turn accelerate greenhouse gas emissions, potentially creating a self-reinforcing feedback loop.

Summary of Policy Audit

What Is Working

Taken together, Chelan County's existing plans and policies reflect a meaningful and growing commitment to climate resilience. Key strengths include:

- **A strong hazard mitigation foundation.** The 2024 Hazard Mitigation Plan and 2025 CWPP together provide a robust, technically credible framework for understanding and reducing the county's most significant hazard risks.
- **Proactive Comprehensive Plan amendment.** Resolution 2022-09 demonstrates that the county has already recognized the need to integrate climate resilience into its land use framework ahead of the HB 1181 mandate.
- **Shoreline and critical areas protections.** The SMP and Critical Areas Ordinance provide meaningful protections for natural systems that contribute to climate resilience, including floodplain conservation and riparian habitat protection.
- **Active cross-agency collaboration.** The development of multiple overlapping plans—flood, wildfire, hazard mitigation, shoreline, watershed—has fostered collaborative relationships among county departments and with state and federal partners that provide a foundation for integrated resilience planning.

DRAFT

Looking Ahead – Pathways for Action

Comprehensive Planning

Comprehensive plan updates provide an opportunity to address these gaps by embedding climate resilience throughout the plan's required elements. Specific opportunities include:

- **Land Use:** Strengthening wildland-urban interface development standards; updating floodplain development restrictions based on climate-adjusted flood projections; incentivizing conservation of natural lands that provide climate buffering and habitat connectivity.
- **Housing:** Requiring climate risk disclosure for new housing in high-risk areas; promoting weatherization and cooling upgrades in affordable and renter-occupied housing; establishing minimum climate resilience standards for residential and farm worker housing.
- **Capital Facilities:** Incorporating climate risk screening into infrastructure investment decisions; establishing level-of-service standards that account for future hazard conditions; prioritizing repair and replacement of flood- and fire-vulnerable infrastructure. Establishing a post-wildfire recovery framework that addresses temporary housing, water quality protection, debris management, and rebuilding standards in affected areas.
- **Transportation:** Prioritizing climate-proofing of vulnerable bridges and roads, including the county's scour-critical bridges; incorporating evacuation route analysis for wildfire and flood scenarios into transportation planning.
- **Utilities:** Coordinating with Chelan PUD on grid resilience, demand management, and backup power for critical facilities; addressing water supply planning under future snowpack conditions in coordination with irrigation districts and water purveyors.
- **Rural:** Updating rural development standards to reduce wildfire ignition risk and improve climate resilience in agricultural and resource lands areas; supporting conservation of working lands that provide natural climate buffering.
- **Economic Development:** Supporting agricultural producers in accessing technical and financial assistance for crop adaptation, irrigation efficiency, and market diversification; developing strategies to maintain tourism and recreation economic vitality during smoke, low snowpack/drought, and extreme weather events; ensuring that economic recovery planning accounts for climate-related disruptions.
- **Natural Resources:** Strengthening protections for riparian areas, wetlands, and floodplains that provide natural flood buffering, water quality filtration, and aquatic habitat; supporting landscape-scale habitat restoration that accounts for climate-driven shifts in species distribution; and aligning county natural resource policies with watershed-scale salmon recovery and water resource planning efforts.
- **Parks and Recreation:** Incorporating climate risk into parks capital planning, including flood and wildfire exposure assessments for park facilities and trails; expanding shade, cooling infrastructure, and water access at heavily used recreation sites to protect visitors during extreme heat and smoke events.

DRAFT

Resilient Policy Opportunities

The following policy directions are organized by theme and reflect both gaps identified in the policy audit and priorities identified through the vulnerability and risk assessment. These directions are intended to inform the development of Comprehensive Plan goals and policies.

Agriculture and Food System Resilience

- Support the transition to irrigation technologies that improve water use efficiency, particularly drip irrigation and soil moisture monitoring systems.
- Develop policies that support crop diversification and variety adaptation as a hedge against chill hour loss and shifting growing season conditions.
- Ensure that farm worker housing meets minimum standards for heat and smoke resilience, including access to cooling, shade, air filtration, and clean drinking water.
- Coordinate with the Cascadia Conservation District and WSU Extension to expand technical assistance for climate adaptation on agricultural lands.
- Recognize and support the role of small farms, diversified agriculture, and local food systems in building regional food security resilience. For example, supporting farm-to-school purchasing programs or shifting away from monoculture operations.

Housing and Vulnerable Population Protection

- Establish standards for climate-resilient design in new residential construction, including broad adoption of the WUI code.
- Promote weatherization and energy efficiency assistance for low-income households, elderly residents, and other vulnerable community members.
- Develop policies addressing housing location in high-risk areas, like the wildland-urban interface, with particular attention to vulnerable populations.
- Support expansion of cooling centers, air filtration sites, and emergency shelter capacity for vulnerable populations during extreme heat and smoke events.
- Ensure all climate resilience communications, programs, and resources are available in Spanish and other languages spoken by county residents.
- Work with wildfire response agencies to provide more information on evacuation routes and how to access emergency evacuation information.

Infrastructure Hardening and Redundancy

- Require climate risk screening for all major capital infrastructure investments, using projected future hazard conditions rather than historical baselines.
- Prioritize repair, replacement, or hardening of the county's 10 scour-critical bridges and other flood-vulnerable transportation infrastructure.
- Support investment in backup power systems for critical facilities, including emergency shelters, medical facilities, emergency operations centers, and communications infrastructure.

DRAFT

- Coordinate with Chelan PUD on grid resilience investments, particularly for transmission infrastructure in wildfire-prone areas.
- Update stormwater design standards to reflect projected increases in peak precipitation intensity.

Natural Systems Conservation and Restoration

- Strengthen critical areas protections for wetlands, riparian areas, and floodplains that provide natural flood buffering, water quality filtration, and habitat connectivity.
- Support riparian restoration projects that improve instream habitat conditions, alluvial water storage, and reduce water temperatures for salmonids and other aquatic species.
- Expand conservation of natural open spaces that provide cooling, carbon sequestration, and watershed protection functions.
- Develop policies that recognize and support the conservation and restoration goals of Tribal Nations, as partners in natural resource stewardship.
- Integrate habitat connectivity considerations into land use planning to support species migration and adaptation as climate conditions shift. For example, ensuring wildlife corridors and vegetated buffers.

Water Resource Management

- Update water supply planning frameworks to account for projected mid-century reductions in snowpack and summer streamflow availability.
- Support investment in water storage, aquifer recharge, and water supply diversification to reduce dependence on summer snowmelt.
- Coordinate with irrigation districts and water purveyors to develop drought contingency plans and water conservation programs.
- Protect source water areas through land use policies that reduce contamination risk, particularly in post-wildfire runoff scenarios.
- Address water rights allocation and management in the context of projected future scarcity, ensuring equitable access for agricultural, municipal, and instream flow needs.

Wildfire Preparedness and Community Adaptation

- Adopt and enforce defensible space and fire-resistant building material standards in the wildland-urban interface, using the 2025 CWPP as a foundation. Consider enforcing higher standards than the state building code.
- Incorporate wildfire risk analysis into land use decisions for new development in high-risk areas, including LAMIRDs and rural residential zones.
- Support sustained funding and implementation of the fuel treatment priorities identified in the 2025 CWPP.
- Develop comprehensive evacuation planning that addresses the needs of vulnerable populations, non-English speakers, people without vehicles, and farm workers.

DRAFT

- Establish policies that facilitate rapid, equitable post-wildfire community recovery, including temporary housing, debris management, and water quality protection.

Immediate Opportunities for Action

For County Departments

Capital facilities planning - incorporating future flood and fire risk

County capital facilities planning could be updated to systematically screen proposed investments against projected future hazard conditions. This means evaluating proposed infrastructure against mid-century flood frequency estimates, wildfire risk maps, and extreme heat projections—not just historical baselines. The 73 county-owned bridges in floodplains, and particularly the 10 identified as scour-critical, represent a near-term priority for targeted investment. New facilities could be sited and designed to remain operational under projected future conditions, and existing facilities could be evaluated for retrofitting where cost-effective.

Transportation network climate-proofing

Chelan County's transportation network is a critical lifeline for rural communities, agricultural operations, and emergency response. The county could develop a transportation resilience plan that inventories vulnerable road and bridge segments, prioritizes investments based on risk and consequence of failure, and incorporates climate projections into maintenance and design standards. Canyon road segments and bridge crossings in floodplains should receive particular attention. Evacuation route analysis for wildfire and flood scenarios could be integrated into transportation planning, with a focus on ensuring alternative routes exist for communities that could be isolated by a single road closure.

County fleet electrification and electric vehicle charging

Chelan County has an opportunity to reduce its operational greenhouse gas emissions and demonstrate climate leadership by transitioning its vehicle fleet to electric vehicles and providing electric vehicle charging in employee and public parking lots. A hydropower-dominant electricity supply means that electric vehicles charged in the county operate on some of the cleanest and lowest-cost electricity in the state, making the emissions and cost benefits of fleet electrification particularly strong. The county could develop a phased fleet electrification plan that identifies priority vehicle classes for early replacement, assesses charging infrastructure needs at county facilities, and leverages available funding through Washington's Climate Commitment Act and federal Inflation Reduction Act clean vehicle incentives. Any transition plan should ensure that vehicles used by emergency responders and public works remain operational during the power outages that frequently accompany wildfire and flood events, including investment in backup charging capacity at key county facilities.

Emergency management capacity for compound hazard events

DRAFT

Chelan County's emergency management program has demonstrated strong performance in responding to individual hazard events. As climate-related changes increase the likelihood of simultaneous or back-to-back events, such as wildfire during a heat wave, flood following a wildfire, and multiple concurrent fire starts, the program will need to expand its capacity for compound-event response. This includes updating the Comprehensive Emergency Management Plan to address compound scenarios, investing in mutual aid agreements that provide surge capacity, and ensuring that cooling centers and emergency shelters remain operational during the power outages that often accompany hazard events.

Updating stormwater and sewer infrastructure standards

Design standards for stormwater and wastewater infrastructure could be updated to reflect projected increases in peak precipitation intensity. New infrastructure could be designed using future climate-adjusted rainfall intensity values rather than historical recurrence interval data. Green infrastructure approaches, including bioswales, permeable paving, constructed wetlands, and floodplain reconnection, could be promoted as complements to traditional stormwater infrastructure, particularly in areas where post-wildfire runoff poses acute stormwater challenges.

For Agriculture and the Private Sector

Irrigation efficiency and water supply diversification

Agricultural producers in Chelan County face a fundamental water supply challenge that will intensify over the coming decades. The transition from flood and sprinkler irrigation to drip irrigation systems can reduce water use by 30–50% (Rahman, 2025) while maintaining or improving crop yields. The county and its partners could expand technical assistance and financial support for irrigation efficiency upgrades, leveraging USDA NRCS programs, Washington Department of Ecology water efficiency grants, and other available funding. Diversification of water supply sources—including groundwater development, water storage, and water trading arrangements—can reduce dependence on surface water flows that will become increasingly unreliable in summer.

Crop adaptation strategies

Agricultural producers could be supported in evaluating and implementing crop adaptation strategies, including planting of lower-chill-hour apple, pear, and cherry varieties; diversification into alternative crops better suited to warming conditions; and experimentation with shade netting, evaporative cooling, and other microclimate management tools. WSU Extension and the Cascadia Conservation District are well-positioned to provide leadership in agricultural climate adaptation research and technical assistance. Market development support for alternative and value-added crops can reduce the financial risk associated with diversification.

Wildfire risk reduction in residential and agricultural areas

Property owners in the wildland-urban interface—including both residential and agricultural landowners—can significantly reduce their wildfire risk through defensible space maintenance, use

DRAFT

of fire-resistant building materials, and participation in community-scale fuel management programs. The county and its fire districts could expand outreach and technical assistance for property-level wildfire risk reduction, building on the foundation established by the 2025 CWPP. Agricultural landowners could be supported in managing vegetation along irrigation canals, orchard edges, and ranch lands to reduce fuel loads and ignition risk.

Farm worker housing and health protection

Farm workers represent one of the county's most climate-exposed populations, facing simultaneous risks from extreme heat, wildfire smoke, and limited access to healthcare and emergency services. Agricultural employers could be supported in complying with state law (WAC Chapters 296-307 and 246-358) to provide adequate cooling, shade, hydration, and access to clean air during extreme events. Farm worker housing should meet minimum standards for thermal comfort, ventilation, and structural resilience. Culturally and linguistically appropriate health information should reach farm workers through trusted community channels, including community health workers and peer educators.

Seasonal diversification and snow-independent recreation

Winter recreation operators, including Mission Ridge, Leavenworth Ski Hill, and Plain Valley Ski Trails, face growing uncertainty as snowpack declines and the snow season shortens. Operators should continue evaluating snowmaking investments and developing snow-independent programming, such as winter hiking, Nordic fat biking, and shoulder-season events to reduce dependence on natural snow conditions. Tourism marketing organizations could expand promotion of spring and fall shoulder seasons and other forms of tourism to distribute visitor activity more evenly across the year and reduce the sector's concentration in the summer outdoor recreation window most vulnerable to smoke, heat, and drought.

River recreation and low-flow planning

Summer recreation businesses dependent on river flows could develop contingency plans for low-flow years and engage proactively in water conservation efforts that seek to reduce the amount of water diverted from the creek/rivers and preserve more instream flows. The county and its partners could work with the Washington Department of Ecology and river recreation stakeholders to establish clear communication protocols when flows drop below recreational thresholds, so that businesses and visitors can plan accordingly. The county, cities, and recreation partners should continue to collaborate on localized recreation management.

Visitor safety during extreme heat and smoke events

Outdoor recreation businesses and event organizers could establish heat and smoke action protocols that include adjusted operating hours during dangerous conditions, shaded rest areas and hydration stations, and clear and timely communication to visitors about health risks. Tourism marketing organizations could develop proactive smoke communication strategies that provide accurate air quality information to potential visitors (rather than allowing uncertainty to drive broad

cancellations) and promote indoor recreation alternatives to retain visitors during smoke events. Investment in cooling infrastructure for visitor-serving indoor and semi-outdoor spaces can help businesses remain competitive as summer temperatures rise.

Natural systems conservation as economic investment

The scenic landscapes, clean rivers, healthy forests, and abundant wildlife that draw visitors to Chelan County are themselves threatened by climate hazards, and investment in natural systems conservation is a direct investment in the long-term economic health of the tourism economy. The recreation and tourism sector should continue to engage as an active partner in trail maintenance, riparian restoration, open space conservation, and landscape-scale resilience efforts and advocate for sustained public funding for parks, recreation infrastructure, and watershed restoration as essential economic development investments.

For NGOs and Community Organizations

Vulnerable population outreach and cooling/smoke shelter coordination

Nonprofit, non-governmental, and faith-based organizations play critical roles in reaching vulnerable residents during climate emergencies. Community organizations could be supported in developing heat and smoke emergency mitigation and response plans that include regular check-ins with elderly, disabled, and socially isolated residents; transportation assistance to cooling centers; and multilingual communication. The network of cooling centers and air filtration sites could be expanded and better promoted, with particular attention to accessibility for people without vehicles and people with disabilities.

Habitat restoration and conservation prioritization

Conservation organizations, Tribes, and fish enhancement groups operating in Chelan County, such as Cascadia Conservation District, Cascade Fisheries, and the Chelan-Douglas Land Trust, are important partners in landscape-scale habitat restoration and conservation. Prioritization of restoration investments could increasingly account for climate resilience objectives, including projects that restore floodplain connectivity, improve riparian shade and water temperature conditions, reduce wildfire risk in forested watersheds, and provide habitat connectivity for species moving in response to changing conditions. Tribal participation in regional conservation planning will provide traditional ecological knowledge and support tribal conservation goals.

Advocacy for housing weatherization and retrofit programs

Housing advocates and community organizations should champion the expansion of weatherization and energy efficiency programs for low-income and renter-occupied housing in Chelan County. Existing state and federal programs, including the Weatherization Assistance Program, Community Development Block Grants, and Washington's Climate Commitment Act funding streams, as well as programs offered by Chelan PUD, provide opportunities that can be utilized to increase resilience to extreme weather and wildfire. Advocacy for simplified program

DRAFT

access, Spanish-language outreach, and landlord engagement can help ensure that the benefits of these programs reach the residents who need them most.

Tribal and cultural resource protection partnerships

Indigenous groups with interests in Chelan County hold deep knowledge of the landscape and its history, and face unique climate risks to culturally significant places, species, and practices. County agencies, conservation organizations, and other partners could pursue formal and informal partnerships with tribes on climate resilience planning, habitat restoration, cultural resource monitoring, and emergency preparedness. Government-to-government consultation could be the norm for planning decisions that may affect tribal interests or treaty rights.

For All Sectors

Continued monitoring of climate indicators

The hazard projections and vulnerability assessments presented in this document represent the best available science as of the time of writing. Climate science is advancing rapidly, and conditions in Chelan County will change in ways that are not fully predictable. All sectors should support ongoing monitoring of key climate indicators—snowpack, streamflow timing, wildfire frequency and severity, air quality index, extreme heat day frequency, and flood event magnitude—and should commit to revisiting and updating this assessment regularly (recommended: every Comprehensive Plan periodic update).

Participation in watershed and regional planning efforts

Climate resilience for Chelan County cannot be achieved through county action alone. Water supply, wildfire, and habitat resilience all require coordination at the watershed and regional scale, involving multiple counties, Tribal Nations, state and federal agencies, utilities, and private landowners. Active participation in watershed planning processes, including the Upper Columbia Salmon Recovery Board, the Chelan Basin Integrated Watershed Plan, and other collaborative forums, is essential for advancing county resilience goals within the broader regional context.

Cross-sector collaboration on overlapping risks

Many of the highest-priority risks identified in this assessment affect multiple sectors simultaneously. Wildfire smoke affects agriculture, tourism, and public health. Drought affects water supply, agriculture, hydropower, and aquatic habitat. Flooding affects transportation, housing, emergency management, and waste systems. Effective responses to these overlapping risks require coordination that crosses sector and jurisdictional boundaries. The Climate Advisory Team model developed for this planning process provides a useful template for ongoing cross-sector collaboration. Its continuation or evolution into a standing resilience coordination and collaboration body should be actively pursued.

DRAFT

Existing Resources and Programs

The following programs, funding sources, and technical assistance resources are available to support climate resilience action in Chelan County. This list is not exhaustive and is intended to highlight key opportunities identified through the planning process, including those discussed at the Chelan County Climate Resilience Summit on April 16th, 2026.

Federal Programs and Funding

FEMA Hazard Mitigation Assistance Grant Programs
FEMA offers several grants through their Hazard Mitigation Assistance (HMA) grant programs, including Building Resilient Infrastructure and Communities (BRIC), Hazard Mitigation Grant Program (HMGP), and Flood Mitigation Assistance (FMA), which provides funding for hazard mitigation projects such as property acquisition in floodplains, bridge hardening, wildfire risk reduction, and slope stabilization. Chelan County has successfully utilized HMA funding to reduce risk from natural hazards and should continue to develop a pipeline of shovel-ready projects to maximize future grant opportunities.

USDA Natural Resources Conservation Service (NRCS) Programs
NRCS offers multiple programs supporting agricultural climate adaptation and natural resource conservation:

- *Environmental Quality Incentives Program (EQIP):* Financial and technical assistance for irrigation efficiency, soil health, and conservation practices on agricultural lands.
- *Agricultural Conservation Easement Program (ACEP):* Supports permanent conservation easements on agricultural and wetland areas.
- *Emergency Watershed Protection Program (EWP):* Provides rapid response funding for watershed protection following natural disasters, including post-wildfire debris management.
- *Regional Conservation Partnership Program (RCPP):* Supports collaborative conservation projects at the landscape scale.

USDA Forest Service Community Wildfire Defense Grant Program
Supports at-risk communities in developing and implementing community wildfire protection plans and fuel reduction projects. Administered through the Washington State Department of Natural Resources.

HUD Community Development Block Grant (CDBG) Program
Flexible funding for community development activities, including housing rehabilitation, weatherization, and infrastructure improvements in low-to-moderate income communities.

EPA Environmental Justice Collaborative Problem-Solving Program
Supports community-based organizations in addressing environmental health disparities, including climate-related health risks in underserved communities.

DRAFT

State Programs and Funding

Washington Climate Commitment Act (CCA) Funding

The Climate Commitment Act's cap-and-invest program generates substantial revenue that is being directed to climate resilience, clean energy, and environmental justice priorities across Washington. Key funding streams relevant to Chelan County include:

- Transportation electrification and active transportation investments
- Wildfire prevention and forest health
- Salmon recovery
- Community resilience grants for vulnerable populations
- Clean Energy Transformation Act implementation support

Washington State Department of Ecology

Ecology administers multiple grant programs relevant to climate resilience, including:

- Flood Control Assistance Account Program (FCAAP): Supports flood hazard identification and mitigation projects.
- Stormwater Financial Assistance Program: Supports stormwater management infrastructure and planning.
- Water Efficiency Grant Program: Supports water conservation and efficiency in municipal and agricultural settings.
- Shoreline Planning Grants: Support shoreline management program updates.

Washington State Department of Natural Resources (DNR)

DNR programs supporting wildfire risk reduction and forest resilience include:

- Forest Health Revolving Account: Funds forest health treatments on state and private lands.
- Wildland-Urban Interface (WUI) Technical Assistance: Support for community wildfire risk assessment and CWPP development.
- Urban and Community Forestry Program: Supports tree canopy expansion and urban heat island mitigation.

Washington State Department of Commerce

Commerce administers planning grants under the Growth Management Act, including funding for Comprehensive Plan updates and Climate Element development. Commerce also administers the Community Economic Revitalization Board (CERB), which supports infrastructure investments in rural communities.

Washington State Department of Health

DOH programs supporting climate and health resilience include:

- Foundational Public Health Services funding for local health jurisdictions
- Environmental public health tracking programs
- Farm worker health programs and outreach

DRAFT

Washington Weatherization Assistance Program
State-administered program providing weatherization and energy efficiency upgrades for low-income households, reducing heating and cooling costs and improving climate resilience.

Local and Regional Programs

Chelan PUD – Vision 2075
The PUD's long-range planning initiative addresses the future of hydroelectric operations, grid resilience, renewable energy diversification, and customer programs in the context of climate change. Vision 2075 represents a major institutional commitment to climate adaptation that aligns closely with the goals of this assessment. Key initiatives include water resource planning, grid modernization, and demand response programs that can help manage peak summer cooling loads.

Voluntary Stewardship Program (VSP)
The Chelan County VSP is administered by the Cascadia Conservation District and provides technical and financial assistance to agricultural landowners who implement conservation practices that protect critical areas while maintaining agricultural viability. The VSP is particularly relevant to climate resilience because many of the conservation practices it supports also reduce vulnerability to drought, flooding, and wildfire. Agricultural landowners in Chelan County are encouraged to engage with the VSP as a primary entry point for conservation and climate adaptation assistance.

Cascadia Conservation District
The Cascadia Conservation District provides technical assistance, cost-share funding, and educational programs to agricultural producers, landowners, and local governments across Chelan and Douglas Counties. District programs address irrigation efficiency, soil health, riparian restoration, and farm planning, all of which contribute to agricultural climate resilience. The district is a key implementing partner for USDA NRCS programs in the region and serves as a trusted resource for the farming community. The district is also a significant partner in reducing wildfire risk on private property.

Our Valley Our Future
Our Valley Our Future is a regional sustainability initiative covering the greater Wenatchee Valley, encompassing Chelan and Douglas Counties and their incorporated cities. The initiative produced the 2025 Community Greenhouse Gas Inventory and has served as a platform for regional collaboration on sustainability and resilience. Our Valley Our Future provides a model for cross-jurisdictional coordination that can be leveraged for shared climate resilience planning, monitoring, and public engagement.

Sustainable NCW
Sustainable NCW is a local nonprofit organization focused on advancing sustainability and climate action in North Central Washington. The organization played a central role in coordinating the Community Greenhouse Gas Inventory and serves as a bridge between community members, local governments, and regional sustainability initiatives. Sustainable NCW can support public

DRAFT

engagement, education, and advocacy for climate resilience priorities identified in this assessment.

Chelan-Douglas Health District

The Chelan-Douglas Health District provides public health programs and services to residents of both counties, including environmental health monitoring, emergency preparedness, and community health education. The Health District is a critical partner for climate resilience efforts related to extreme heat, wildfire smoke, and the health of vulnerable populations, including farm workers. The district's existing relationships with agricultural employers, community health workers, and Spanish-speaking communities make it an essential partner for equitable climate resilience outreach.

Chelan-Douglas Community Action Council

The Chelan-Douglas Community Action Council is a nonprofit organization dedicated to reducing poverty and improving the self-sufficiency of low-income residents across Chelan and Douglas Counties. The CAC provides a broad range of direct services addressing the root causes of economic vulnerability, including housing assistance, food security programs, early childhood education, and emergency financial assistance. The organization offers programs for home energy assistance and weatherization.

CAFÉ (Community for the Advancement of Family Education)

CAFÉ is a nonprofit organization that advances family and community growth through education. They serve the county's culturally diverse community, providing opportunities in leadership, civic and social engagement, literacy development, and academic advancement. CAFÉ has supported the development of multiple community resources that enhance resilience to hazards such as wildfire and smoke. CAFÉ's deep relationships with Spanish-speaking residents and farmworker families make it an important partner in ensuring that climate resilience resources reach the county's vulnerable populations.

Chumstick Wildfire Stewardship Coalition

The Chumstick Wildfire Stewardship Coalition is a community-based organization working to reduce wildfire risk and build long-term landscape resilience in the Chumstick watershed. The coalition brings together landowners, fire districts, state and federal agencies, and community members to implement collaborative fuel reduction projects, support defensible space programs, and advance community wildfire preparedness at the neighborhood scale. The coalition plays an important role in translating county and regional wildfire risk-reduction goals into on-the-ground action and represents a model for community-led climate resilience that could be replicated in other high-risk areas of the county.

Washington State University Extension – Wenatchee

WSU Extension provides research-based education and technical assistance to agricultural producers, homeowners, youth, and communities across Chelan County. Extension programs on irrigation management, crop adaptation, integrated pest management, and farm business planning

DRAFT

are directly relevant to agricultural climate resilience. WSU's broader research capacity, including through the Center for Sustaining Agriculture and Natural Resources, provides access to cutting-edge science on climate adaptation for tree fruit and other agricultural sectors.

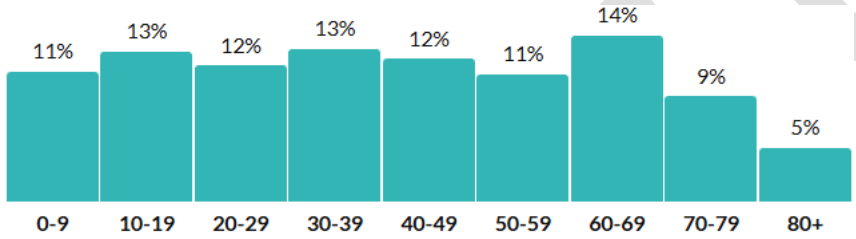
Upper Columbia Salmon Recovery Board

The Upper Columbia Salmon Recovery Board coordinates salmon recovery planning and investment across the upper Columbia River basin, including Chelan County. Salmon recovery and climate resilience are deeply intertwined—healthy, functioning watersheds that support salmon are also more resilient to drought, flooding, and wildfire. The recovery board's planning frameworks and funding streams represent important opportunities for aligned investment in natural systems resilience.

Link Transit

Link Transit provides public transportation services across Chelan and Douglas Counties, connecting residents to employment, services, and community resources. During climate emergencies, particularly extreme heat events, Link Transit can play a critical role in transporting vulnerable residents to cooling centers and emergency shelters. Link Transit's transition to a zero-emissions fleet also contributes to regional greenhouse gas reduction goals.

DRAFT



Appendix

Appendix A: Community Demographics and Social Vulnerability

Full Demographic Data Tables

The following tables present detailed demographic data for Chelan County drawn from the Washington Office of Financial Management (OFM) April 1, 2024, population estimates and the U.S. Census Bureau American Community Survey (ACS) 5-Year Estimates (2019–2023). These data provide a more complete picture of the county's population characteristics relevant to climate vulnerability assessment.

Figure A-1: Chelan County Population by Age Group

Source: Washington OFM April 1, 2024, Population Estimates

Table A-2: Chelan County Race and Ethnicity

Race/Ethnicity	Population	Percent
White alone	72,876	92.8%
American Indian and Alaska Native alone	1,649	2.1%
Asian alone	1,100	1.4%
Black or African American alone	864	1.1%
Native Hawaiian and Other Pacific Islander alone	157	0.2%
Some other race alone	943	1.2%
Two or more races	1,886	2.4%
Hispanic or Latino (any race)	22,931	29.2%

Source: U.S. Census Bureau ACS 5-Year Estimates, 2019–2023. Note: Hispanic or Latino is an ethnicity category that overlaps with racial categories above.

Table A-3: Chelan County Household Income Distribution

Income Range	Number of Households	Percent
Less than $25,000	4,218	14.5%
$25,000–$49,999	4,979	17.1%
$50,000–$74,999	5,012	17.2%
$75,000–$99,999	3,926	13.5%

DRAFT

$100,000–$149,999	5,611	19.3%
$150,000 or more	5,354	18.4%
Total	**29,100**	**100%**

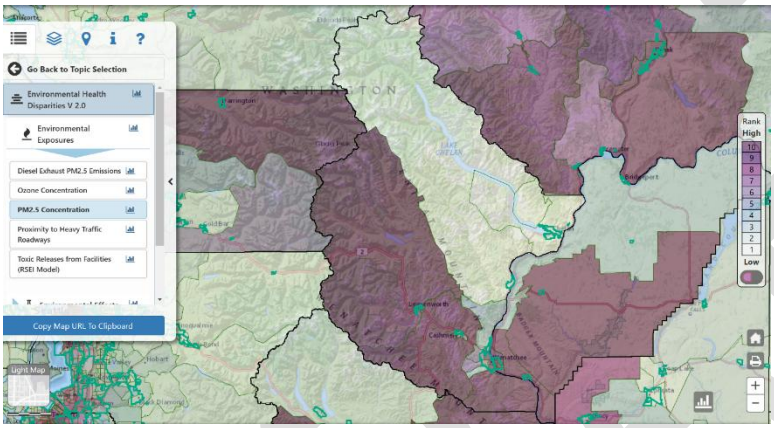
Washington DOH Environmental Health Disparities Maps

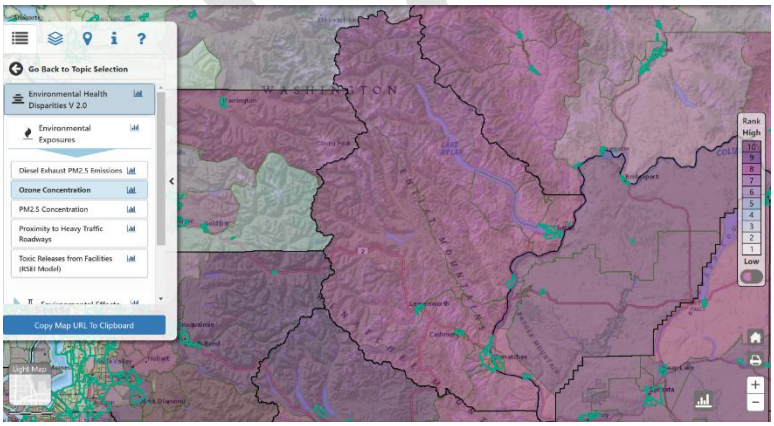
The Washington Department of Health's Environmental Health Disparities (EHD) Map tool identifies communities experiencing disproportionate environmental health burdens by combining environmental exposure indicators, health outcome data, and socioeconomic and sensitive



DRAFT

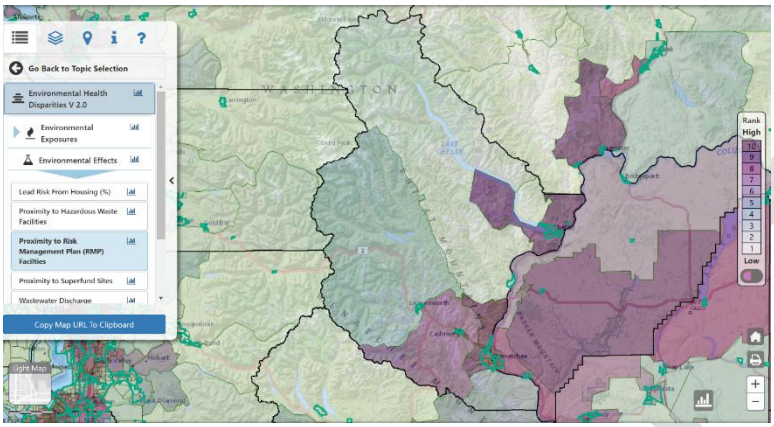
population factors at the census-tract level. The following summary describes key EHD findings for Chelan County census tracts relevant to climate resilience planning. Full interactive maps are available at the Washington DOH EHD Map website.

Environmental Exposure Indicators Relevant to Climate Resilience



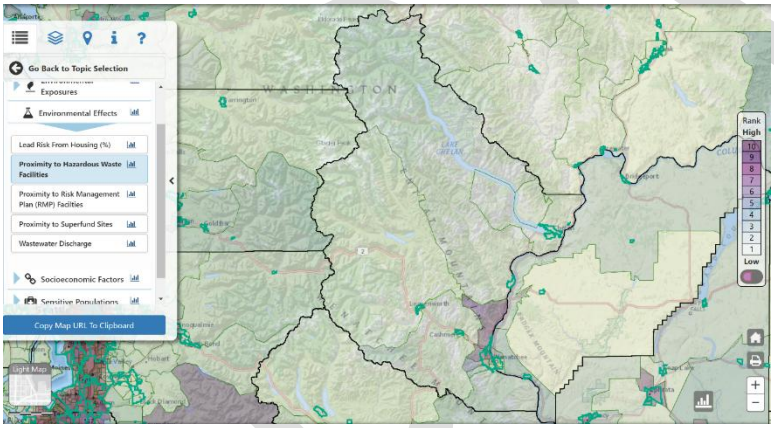
PM2.5 Concentration: Fine particulate matter, the primary pollutant associated with wildfire smoke, presents a greater burden in the more populated areas of Chelan County, including the Wenatchee Valley and Cashmere areas. These areas have higher population density, meaning more residents face respiratory health risks during wildfire smoke events. Census tracts in these areas score in the moderate-to-high range for PM2.5 burden.

Exhibit 21 PM2.5 Concentrations Across Chelan County (WA DOH, No Date)



Ozone Concentration: Ozone concentration poses a greater burden across the entire county, reflecting regional air quality conditions in the Columbia Basin and Cascade foothills. All census tracts in Chelan County score in the moderate to high range for ozone burden, indicating a county-wide air quality vulnerability that will be exacerbated by increasing temperatures and wildfire smoke.

Exhibit 22 Ozone Concentration Across Chelan County (WA DOH, No Date)



Proximity to Risk Management Plan Facilities: Burden is moderate to high in the southern and eastern portions of Chelan County, where industrial facilities subject to EPA Risk Management Plan requirements are concentrated. Flooding of these facilities during extreme precipitation events could create additional environmental health risks.

Exhibit 23 Proximity to Risk Management Plan Facilities in Chelan County (WA DOH, No Date)

Proximity to Hazardous Waste Storage and Disposal: Moderate to high burden is concentrated in the southeast portion of the county, near industrial and agricultural chemical storage areas.

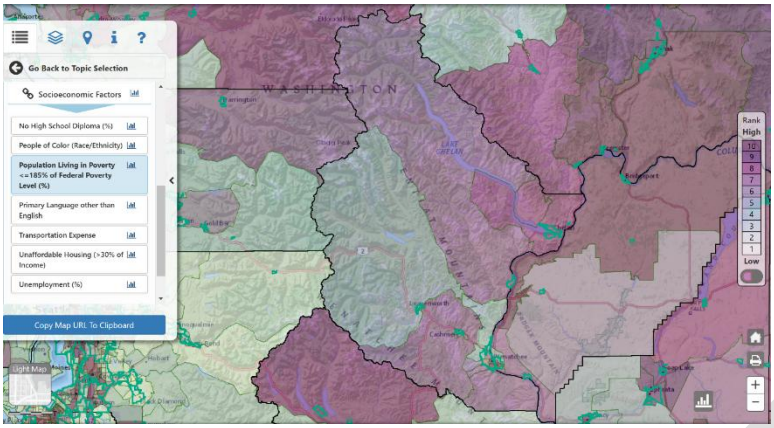


Exhibit 24 Proximity to Hazardous Waste Storage and Disposal in Chelan County (WA DOH, No Date)

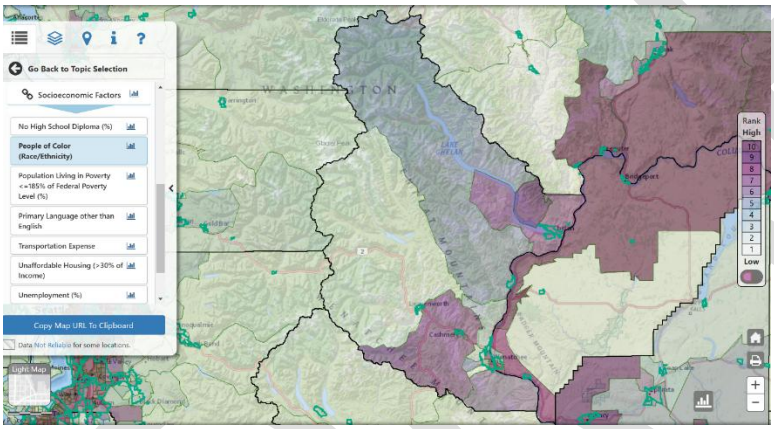
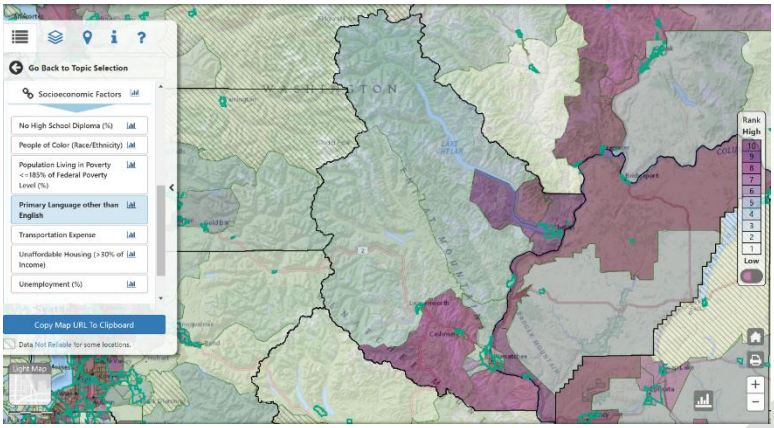
Socioeconomic and Sensitive Population Indicators



People Living in Poverty: Poverty burden is moderate to high across the entire county, with the highest concentrations in the southern and eastern portions. These areas overlap with agricultural employment centers where farm workers and low-income households face elevated climate exposure.

Exhibit 25 People Living in Poverty in Chelan County (WA DOH, No Date)



People of Color: All areas of Chelan County have moderate to high scores on this indicator, reflecting the county's significant Hispanic and Latino population and other communities of color. No part of the county is free from potential climate-related environmental justice concerns.

Exhibit 26 Concentration of People of Color in Chelan County (WA DOH, No Date)

Primary Language Not English: The predominance of non-English speakers is highest in the agricultural portions of the county, particularly in the Wenatchee Valley and surrounding agricultural communities, where Spanish-speaking farm workers and their families are concentrated. This population faces language barriers that can reduce access to emergency information, health services, and climate resilience resources.

Exhibit 27 Concentration of Non-English Speakers in Chelan County (WA DOH, No Date)

EHD Summary for Climate Planning

The EHD analysis reinforces the importance of an equity-centered approach to climate resilience planning in Chelan County. The populations facing the greatest environmental health burdens—low-income residents, communities of color, non-English speakers, and people in areas with elevated industrial and air quality exposure—are often the same populations with the least adaptive capacity to respond to climate hazards. Climate resilience investments and programs should be explicitly designed to reach these communities, and public participation in climate planning should actively engage them as partners in identifying priorities and solutions.

Appendix B: Primary Information Sources

The following table lists the primary data sources used in developing this Climate Resilience Assessment. Sources are organized by category.

Appendix C: Community Engagement and Public Outreach

Climate Advisory Team Overview

The Chelan County Climate Advisory Team (CAT) was established to provide community expertise, local knowledge, and stakeholder perspectives throughout the development of this Climate Resilience Assessment. The CAT was designed to represent the diverse sectors and communities with a stake in climate resilience planning in Chelan County, including agriculture, public health, Tribal Nations, conservation, energy, housing, and community development.

The CAT included representation from the following organizations and sectors:

Member	Organization	Sector Represented
Ryan Williams	Cascadia Conservation District	Conservation
Eric Torres	Chelan-Douglas Health District	Public Health

DRAFT

Nick Rohrback	Chelan-Douglas Regional Port Authority	Economic Development
Chad Kruger	Washington State University	Agriculture
Gerardo "Jerry" Perez	Community Health Plan of Washington	Healthcare and Vulnerable Populations
Kelli Scott	Chelan PUD	Energy and Utilities
Jim White	Chelan PUD	Energy and Utilities
Rowena St. Pierre	Colville Confederated Tribes	Tribal Nations
John Sirois	Colville Confederated Tribes	Tribal Nations

The Climate Advisory Team met regularly from December 2024 through December 2025, with meetings focused on the following topics:

Date	Primary Topics
December 2024	Project orientation, roles and responsibilities, planning process overview
January 2025	Climate hazard overview, local conditions and observed trends
February 2025	Asset inventory review, identification of additional assets and local context
April 2025	Vulnerability assessment methodology, review of draft vulnerability ratings; Policy audit findings, recommended policy directions
December 2025	Risk assessment results, priority risk combinations; Pathways for action

Meeting summaries and materials from all CAT meetings are available upon request from the Chelan County Department of Natural Resources.

Public Outreach Summary

Public engagement for the Climate Resilience Assessment was designed to complement the more technical work of the Climate Advisory Team by reaching a broader cross-section of Chelan County residents, businesses, and community organizations. Engagement activities were coordinated with the broader 2026 Comprehensive Plan public participation program.

Engagement objectives

The public engagement program was designed to:

- Build awareness of changing conditions in Chelan County and the purpose of the Climate Resilience Assessment
- Gather community input on perceived climate risks, local priorities, and potential resilience strategies
- Ensure that Spanish-speaking residents, farm workers, and other underrepresented communities had meaningful opportunities to participate
- Share findings and draft content with the public and incorporate feedback into the final assessment

Engagement activities

DRAFT

Project Webpage: A dedicated project webpage was established on the Chelan County website, providing project background, events and meeting schedules, resources, and contact information for questions and comments. The webpage was available in both English and Spanish.

Community Survey: A community-wide online survey was developed and distributed in both English and Spanish to gather input on residents' climate concerns, perceived vulnerabilities, and priorities for action. The survey was promoted through county communications channels, partner organization networks, social media, and direct outreach to agricultural and farm worker community organizations. Survey results were analyzed and incorporated into the vulnerability and risk assessment, particularly in the identification of locally significant assets and impacts.

Bilingual Outreach Materials: All public-facing materials—including the project webpage, survey, public outreach notices, and promotional materials—were made available in both English and Spanish. Outreach to Spanish-speaking communities was coordinated through CAFÉ.

Public Meetings and Outreach: Public meetings were held at key milestones in the planning process, in coordination with the Comprehensive Plan, to share findings and gather feedback. Meetings were held at accessible locations in the county and provided Spanish interpretation when needed. The Climate Resilience Assessment was also promoted at multiple community events, including Earth Day Fairs.

Resilience Summit: A community Resilience Summit on April 16th, 2026, brought together stakeholders from across sectors to discuss climate risks, existing resources, and opportunities for collaboration. The summit served as a platform for identifying existing programs and funding sources, and for building relationships among organizations that will be essential partners in implementing resilience strategies.

Engagement findings

Key themes that emerged from public engagement activities and informed the assessment include:

- Strong community awareness of and concern about wildfire and smoke as the most immediate and visible climate threat
- Deep concern among agricultural stakeholders about water availability and the long-term viability of irrigated agriculture under reduced snowpack conditions
- Recognition of farm workers and elderly residents as particularly vulnerable populations requiring targeted support
- Interest in practical, funded programs and technical assistance rather than regulatory requirements alone
- Desire for continued cross-sector collaboration and information sharing on climate resilience topics
- Support for coordination with tribal partners on natural resource stewardship and cultural resource protection

Engagement with tribes and vulnerable populations

DRAFT

Both the Colville Confederated Tribes and the Yakama Nation were invited to participate in the Climate Advisory Team. Traditional territories leaders, climate action specialists, and biologists from the Colville Tribes participated throughout the resilience assessment process—providing insight into how climate hazards affect culturally significant resources, places, and the tribal community. Vulnerable populations were reached primarily via CAFÉ, which works directly with the Spanish-speaking and farmworker communities. The Chelan-Douglas Health District represented the perspectives of other vulnerable populations through its participation on the Climate Advisory Team.

Additional information can be found on the Chelan County Department of Natural Resources website.

1. Introduction to Chelan County's LCA

The County of Chelan is in the process of updating its Comprehensive Plan to account for the population growth expected between 2027 and 2046. This report details the Land Capacity Analysis (LCA) for the County of Chelan. It's important to note that individual cities and their respective Urban Growth Areas (UGAs) within Chelan County are responsible for conducting their own LCAs. Findings from this study do not include any geographies within UGAs not under County jurisdiction, such as Cashmere, Entiat, Leavenworth, and Wenatchee. The unincorporated UGAs of Manson and Peshastin are included in this analysis, as they fall within County jurisdiction.

This report outlines the first step in the process undertaken by Chelan County to ensure sufficient land is available to meet future housing needs, based on projected population growth and the corresponding housing demand of all income segments through 2046. The contents of this process and report include:

Chapter 2: Executive Summary

- Key highlights from the assessment

Chapter 3: Population Estimates and Projections

- Historical population trends and projections provided by the Washington State Office of Financial Management (OFM) and adopted by Chelan County

Chapter 4: Future Housing Demand

- Projected future housing demand based on population projections, using the Housing for All Planning Tool (HAPT)
- Adjusted housing projections that account for new housing production from 2020 to 2026 to accurately reflect the full planning period

Chapter 5: Residential Land Capacity Analysis

- Assessment of residential land availability, which defines the County's capacity to accommodate future housing

Chapter 6: Housing Demand Vs. Supply

- Comparison of project housing demand with supply to determine whether Chelan County can meet future housing needs

Executive Summary

Chelan County is updating its Comprehensive Plan to accommodate projected population growth between 2027 and 2046 and to ensure an adequate housing supply across all income levels. This Land Capacity Analysis (LCA) focuses on unincorporated areas not managed by cities, such as the Manson and Peshastin Urban Growth Areas (UGAs). Under the Growth Management Act (GMA), counties must establish UGAs to concentrate urban development within designated boundaries and prevent urban-style growth in rural areas.

Manson and Peshastin are unique because neither contains an incorporated city, making Chelan County responsible for managing these areas. In contrast, each incorporated city in Chelan County is responsible for managing its own UGA. For this reason, PC does not include the other UGAs in the County in this analysis.

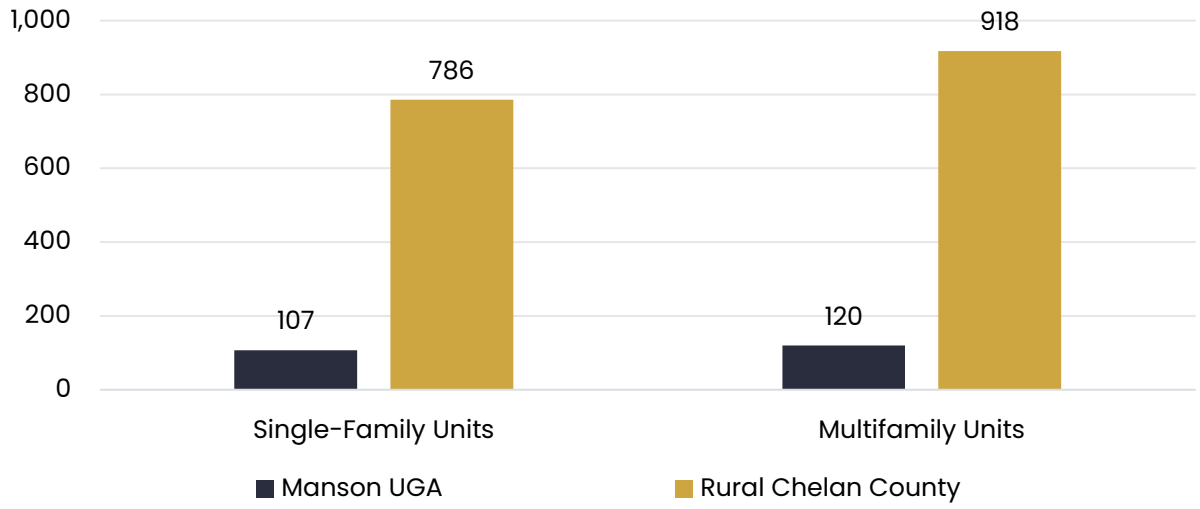
Population

On March 5, 2024, the Board of Chelan County Commissioners adopted population allocations from the Washington Office of Financial Management (OFM). These allocations forecast how population growth will be distributed across the Country over the next 20 years, based on OFM's medium growth model.

Between 2022 and 2046, rural Chelan County is expected to account for approximately 25% of the County's total population growth, reaching a population of 27,198 by the end of the planning period. The Manson UGA is projected to account for approximately 3% of growth, with a population of 2,592 in 2046. The Peshastin UGA is not expected to experience any growth, and its population is projected to remain stable at 655 through 2046.

Future Housing Needs

Like the population projections, future housing needs are determined by the population growth allocations adopted by Chelan County. To assess these needs, the Points Consulting (PC) team used a model provided by Chelan County that incorporates the Housing for All Planning Tool (HAPT), developed by the Washington State Department of Commerce. The HAPT model estimates housing needs from 2020 to 2046 by Area Median Income (AMI) level for each jurisdiction in the County based on the adopted population allocations. Chelan County selected a methodology aligned with "Method A" from the HAPT guidance.



The planning period for Chelan County's next Comprehensive Plan spans 2027 to 2046. To align the model's projections with this timeframe, PC adjusted the baseline using housing permit data collected by the University of Washington Center for Real Estate Research (WCRER) from 2021 to 2023, including a forecast through 2026. Following this

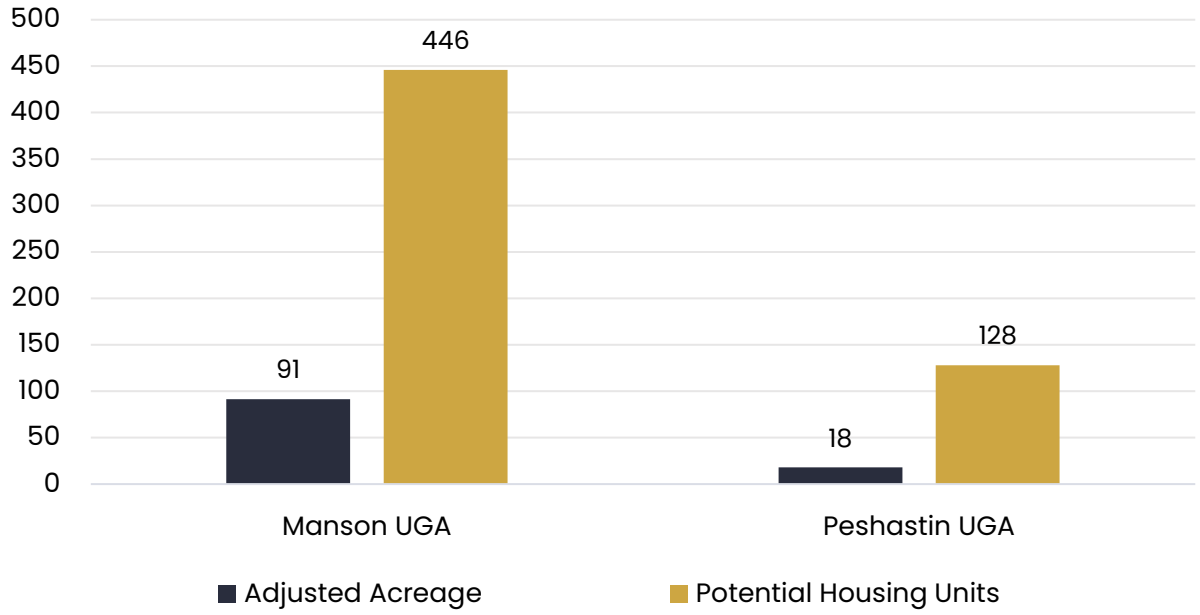
DRAFT

adjustment, the County's HAPT-based projections indicate the number of housing units needed in each jurisdiction by 2046.

It is also important to note that, due to Peshastin's projected lack of population growth, there are no additional housing needs forecasted for the Peshastin UGA.

Figure 1.1: Housing Needs, 2027-2046

Source: Housing for All Planning Tool, Method A; WCRER Housing Permit Data; HUD Area Median Incomes; HUD Fair Market Rents



Residential Land Capacity Analysis

Using parcel data from Chelan County, PC conducted a Residential LCA. Within zones permitting residential development, PC classified parcels as **Vacant**, **Potentially Redevelopable**, or **Underutilized** based on improvement values, land values, and Department of Revenue (DOR) codes. Following best practices, PC applied a 25% reduction to account for market factors and an additional 25% reduction to account for public use and right-of-way development on Vacant land.

Although findings for the rural county areas are detailed in Chapter 4, key results are summarized here where appropriate. Our analysis of Vacant parcels is shown in Figure 1.2.

DRAFT

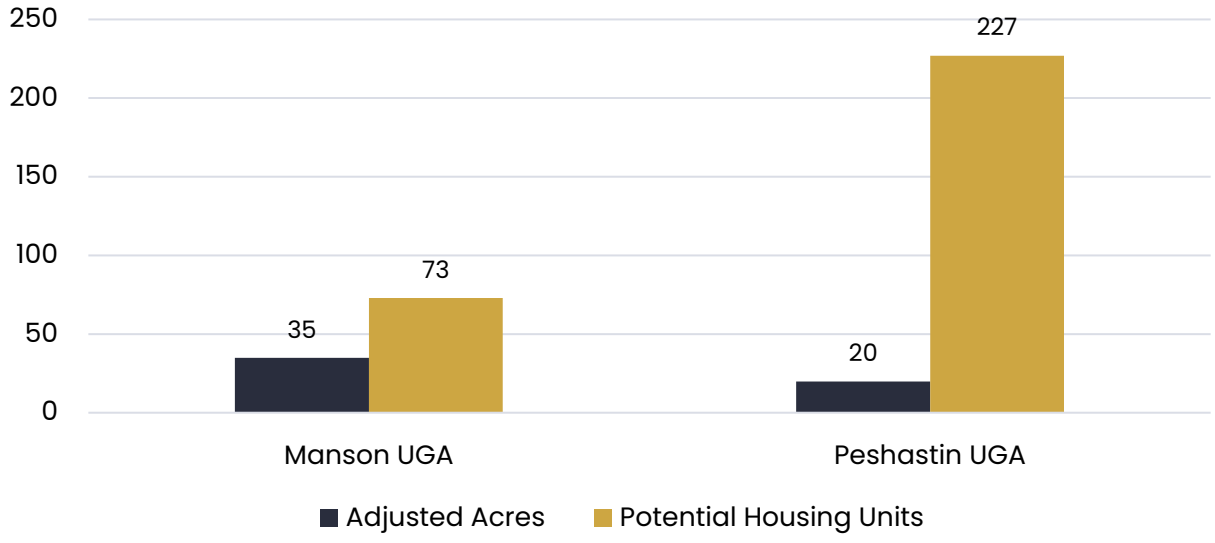


Figure 1.2: Chelan County Unincorporated Urban Growth Area Vacant Residential Land and Potential Units

Source: City and County of Chelan, 2024

PC defines Potentially Redevelopable parcels as those with improvement values lower than land values but exceeding $10,000. This captures properties with existing improvements that are significant yet still offer substantial land available for further development. Figure 1.3 shows the results of our analysis.

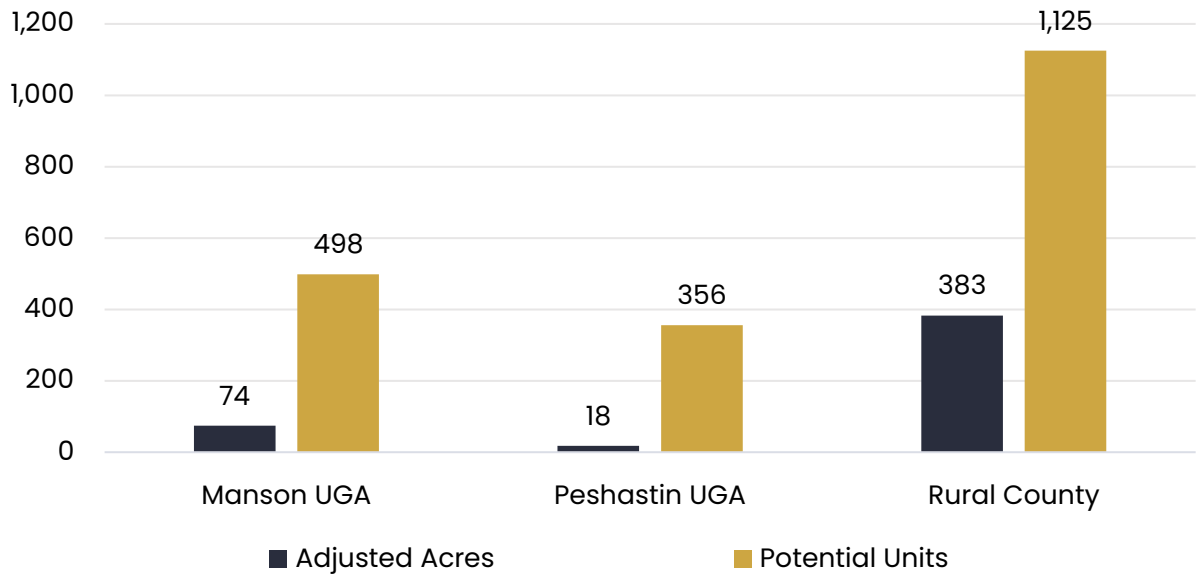

Figure 1.3: Redevelopable Residential Land in Unincorporated UGA Land

Source: City and County of Chelan, 2024

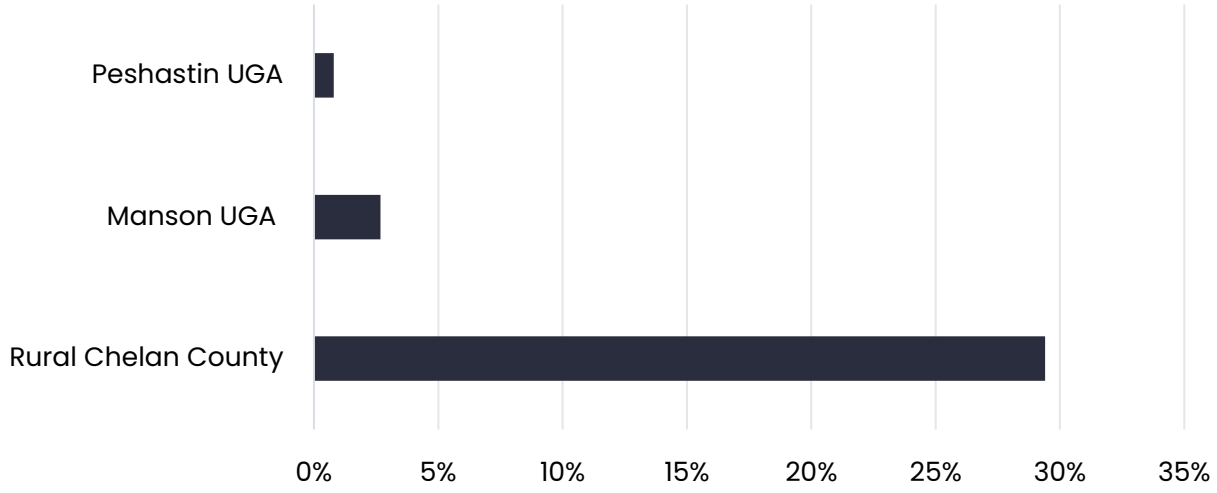
PC identified Underutilized parcels based on current use and zoning standards. Although these properties are already developed and have improvement values high enough to exclude them from the Potentially Redevelopable category, they remain candidates for redevelopment over the next 20 years to help meet housing demand. These properties have improvement values greater than their land values and exceed $10,000, but their current use reflects a lower density than what is allowed under current zoning. Figure 1.4 shows the results of our analysis.

Figure 1.4: Underutilized Land Inventory in Unincorporated UGAs and Rural County

Source: City and County of Chelan, 2024

Capacity Findings

PC's analysis of Vacant, Potentially Redevelopable, and Underutilized parcels shows that the total housing supply can meet projected housing demand through 2046. By strategically focusing on underutilized parcels (especially in Rural Village zones) policymakers can help ensure affordability and limit sprawl. Ongoing monitoring of market conditions and infrastructure investments will help keep growth aligned with long-term targets.



2. Population Estimates, Trends, and Projections

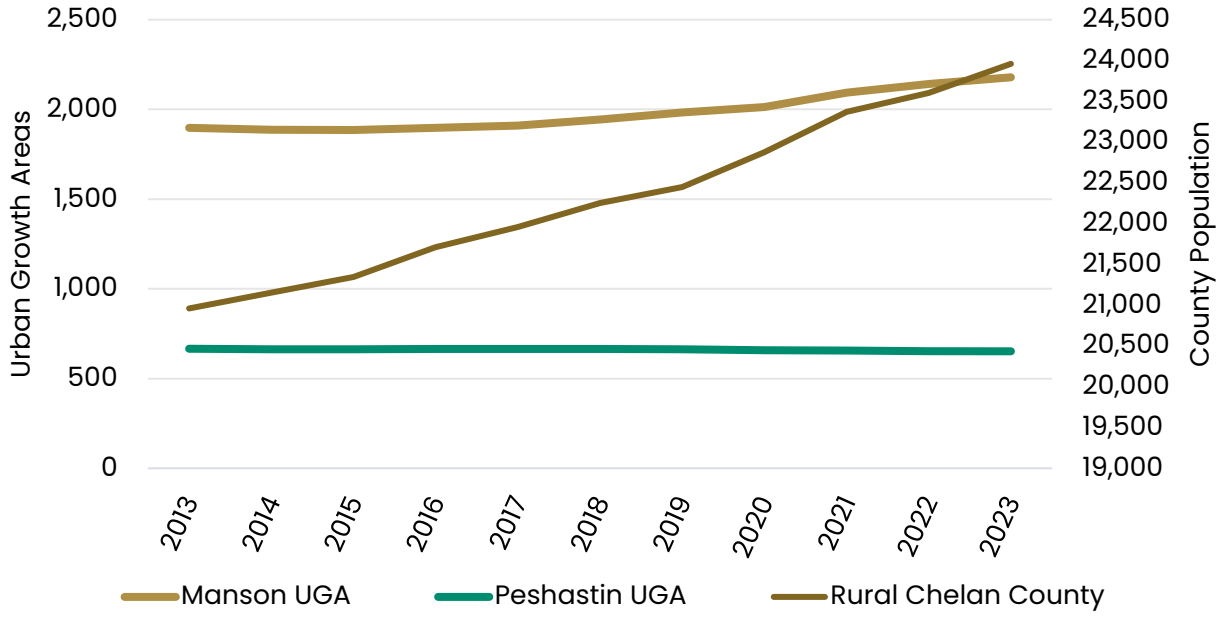
Population Estimates

In 2023, Chelan County's estimated population was 81,500. Approximately 40.4% of residents lived in unincorporated areas (land located outside city limits but within the Urban Growth Areas (UGAs)) designated for each city. Although not currently part of a city, these areas are eligible for annexation when the need arises.

Chelan County has two UGAs not associated with an incorporated city: Peshastin and Manson. In 2023, Peshastin accounted for 0.8% of the County's population, while Manson represented 2.7%. Rural Chelan County, located entirely outside both city and UGA boundaries, made up 29.4% of the total population (Figure 2.1).

Figure 2.1: Percent Share of Total County Population by Geographical Areas, 2023

Source: Small Area Estimates Program–Urban Growth Area Population Estimates, Washington State OFM



Population Growth Trends

In 2013, Chelan's County's population was estimated at 73,391. At that time, 28.6% of residents lived in rural Chelan County. By 2023, this share had grown, indicating an increasing proportion of the population living outside both city and UGA boundaries. In 2013, approximately 2.6% of the population lived in Manson and 0.9% in Peshastin

Overall, the County's population grew 11.4% between 2013 and 2023. The Chelan UGA and Leavenworth UGA experienced the highest percentage increases (5.8% and 12.3% respectively). However, in terms of total population growth, the Wenatchee UGA saw the largest increase.

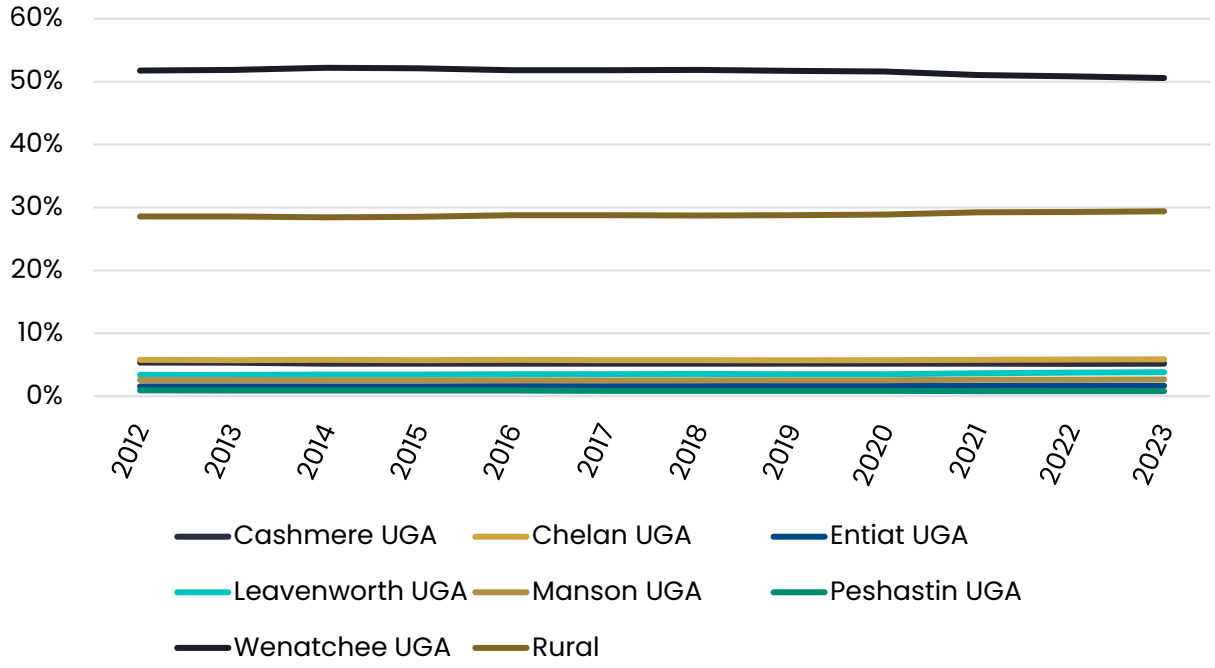


Figure 2.2 illustrates population changes in County-managed jurisdictions during this period. Figure 2.3 presents population trends for each area within Chelan County.

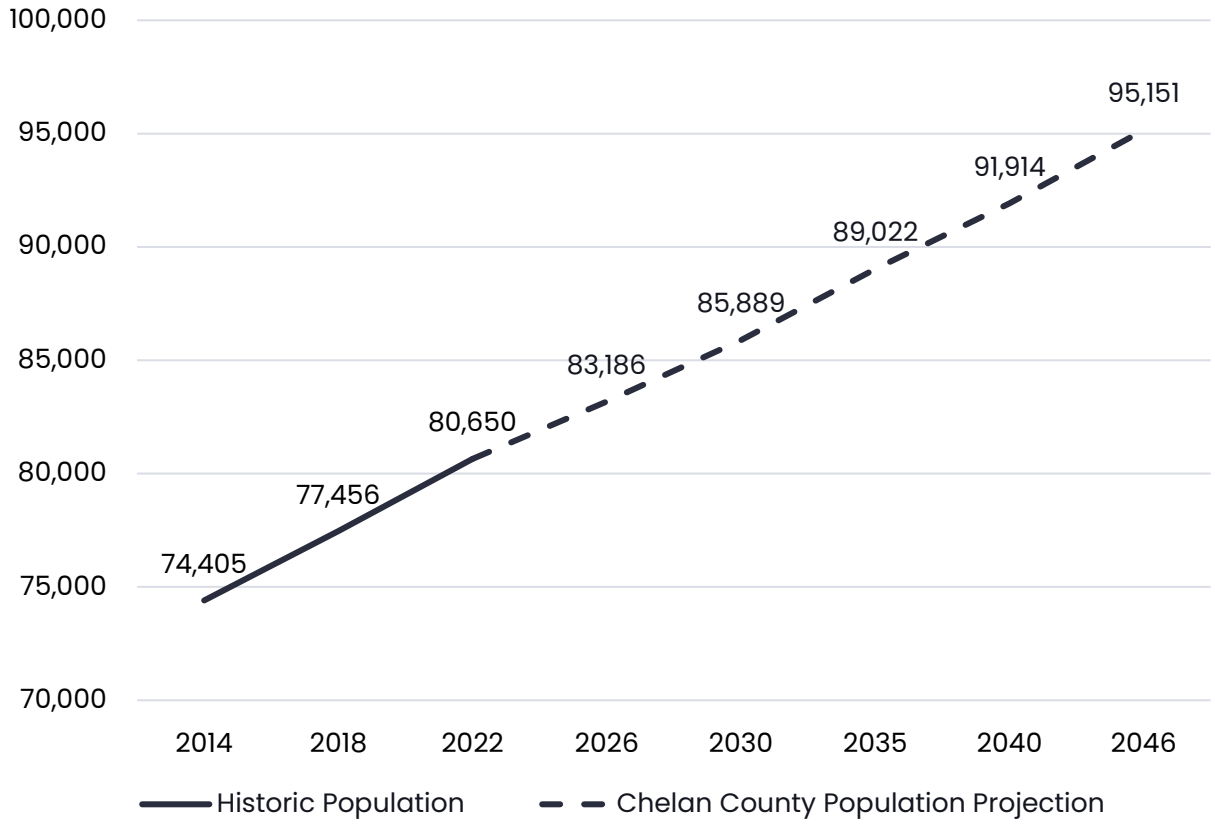
Figure 2.2: Unincorporated Urban Growth Area Populations, 2013-2023

Source: Small Area Estimates Program–Urban Growth Area Population Estimates, Washington State OFM

Figure 2.3: Chelan County Population Percentages



Source: Small Area Estimates Program–Urban Growth Area Population Estimates, Washington State OFM

On March 5, 2024, The Board of Chelan County Commissioners adopted a set of population projections based on the medium targets set by the Washington State

Office of Financial Management (OFM). Figure 2.4 shows the population projections that were chosen by the County, while Figure 2.5 displays the low, medium, and high population projections provided by the OFM. Also shown is the 2017 Chelan County Comprehensive Plan population projection in comparison to the new medium projection.

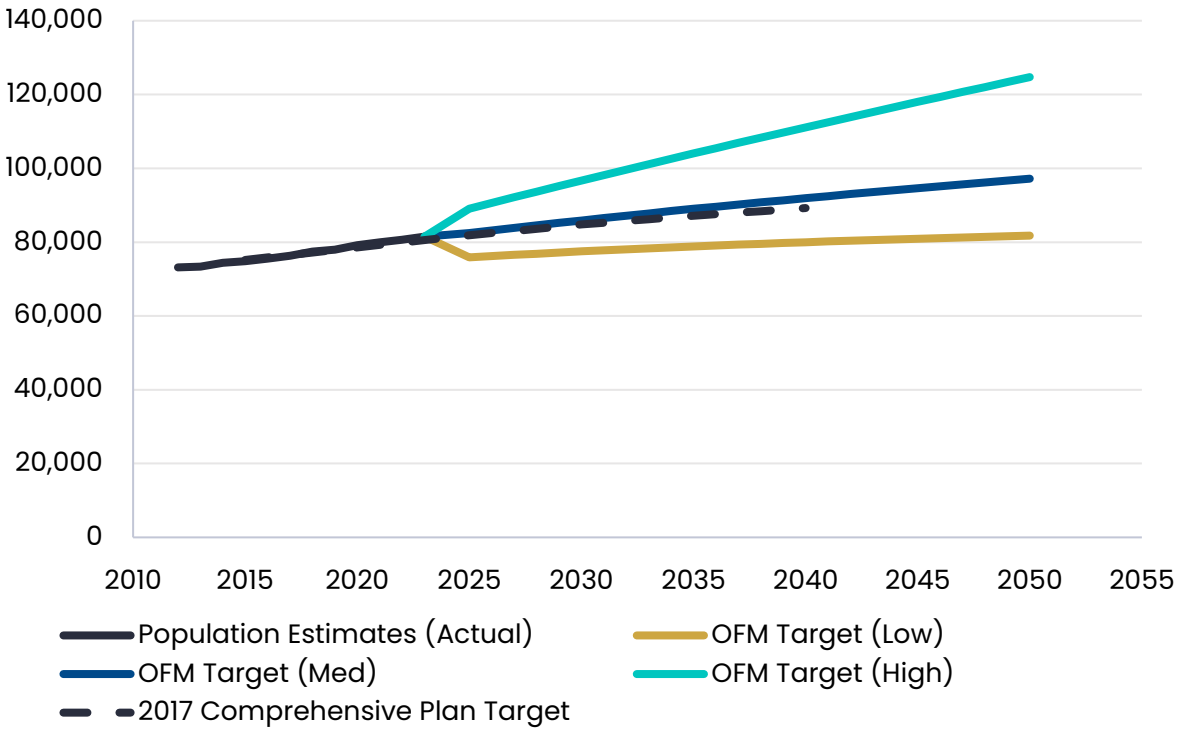


Table 2.1 shows the adopted projections broken down by each Urban Growth Area, as well as incorporated and unincorporated Chelan County.

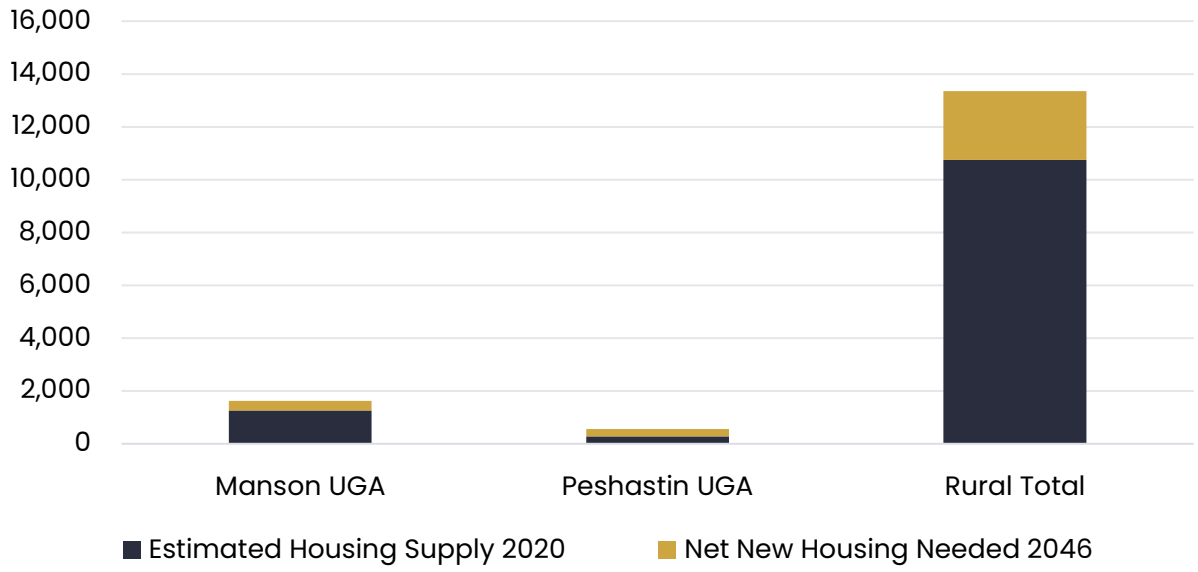
3. Future Housing Demand

The Housing for All Planning Tool (HAPT) is a product of House Bill 1220 (HB 1220), a revision to the Growth Management Act (GMA). This tool helps counties plan for population growth by accounting for housing needs across different income levels. Using population projections for 2046 from the Washington State Office of Financial Management (OFM), the HAPT breaks down housing needs by Area Median Income (AMI) using three allocation methods.

On March 5, 2024, Chelan County selected the medium population projection as the most accurate reflection of expected growth.

In conjunction with this, the County adopted housing need allocations for the planning period from 2020 to 2046. These projections, based on Method A of the Washington State Department of Commerce's HAPT, distribute housing needs to Urban Growth Areas (UGAs) and rural areas.

Allocation Method A:



- Assumes all housing needs are met through new housing production
- Applies uniform income-based percentage shares to each jurisdiction's net new housing growth target

To ensure consistency, both the County and its cities must use the same allocation method, so that all housing needed to support projected population growth is properly accounted for.

Figure 3.1 shows the estimated housing needs for Manson, Peshastin, and rural unincorporated areas. A full breakdown of housing needs for the entire County is provided in Appendix A. Notably, Peshastin is projected to need zero new housing units by 2046.

DRAFT

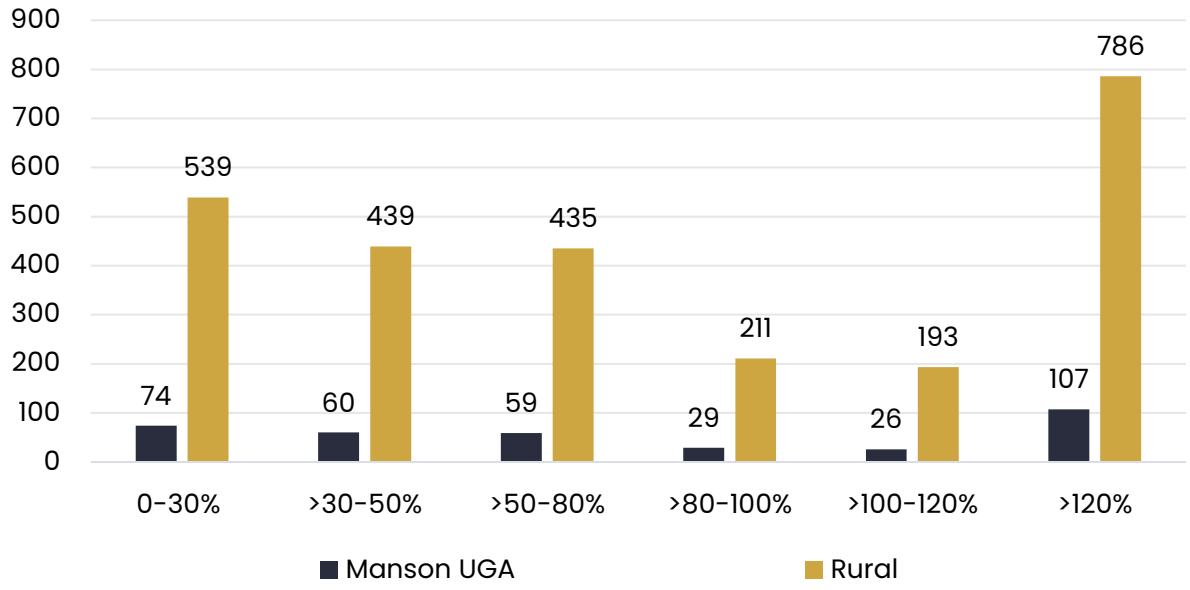


Figure 3.1: Projected Housing Need for Unincorporated County Areas

Figure 3.2 shows the demand for housing based on Area Median Income (AMI) level for the same period.

Figure 3.2: Housing Need by AMI Level for Unincorporated County

Source: Chelan County Population and Housing Allocations using the Housing for All Planning Tool, Washington State Department of Commerce

Estimated Housing Supply by Income Level and Region

The Comprehensive Planning Update covers a 20-year growth period. However, the HAPT model produces housing demand estimates for the years 2020 to 2046. To align with the 20-year planning horizon, housing supply is first estimated for the period from 2020 to 2026. These estimates are then subtracted from the total housing demand (2020–2026) to determine the remaining housing need for the 20-year period of 2027 to 2046.

Housing supply estimates for 2021 to 2026 are based on permit data collected by the University of Washington's Center for Real Estate Research (WCRER).

Residential Permits Issued, 2021–2023

The housing permit data from WCRER includes the number of housing permits issued by local jurisdictions, along with their corresponding permit values, for the years 2021 to 2023. These permit values were used to estimate the value of the housing units constructed during that period.

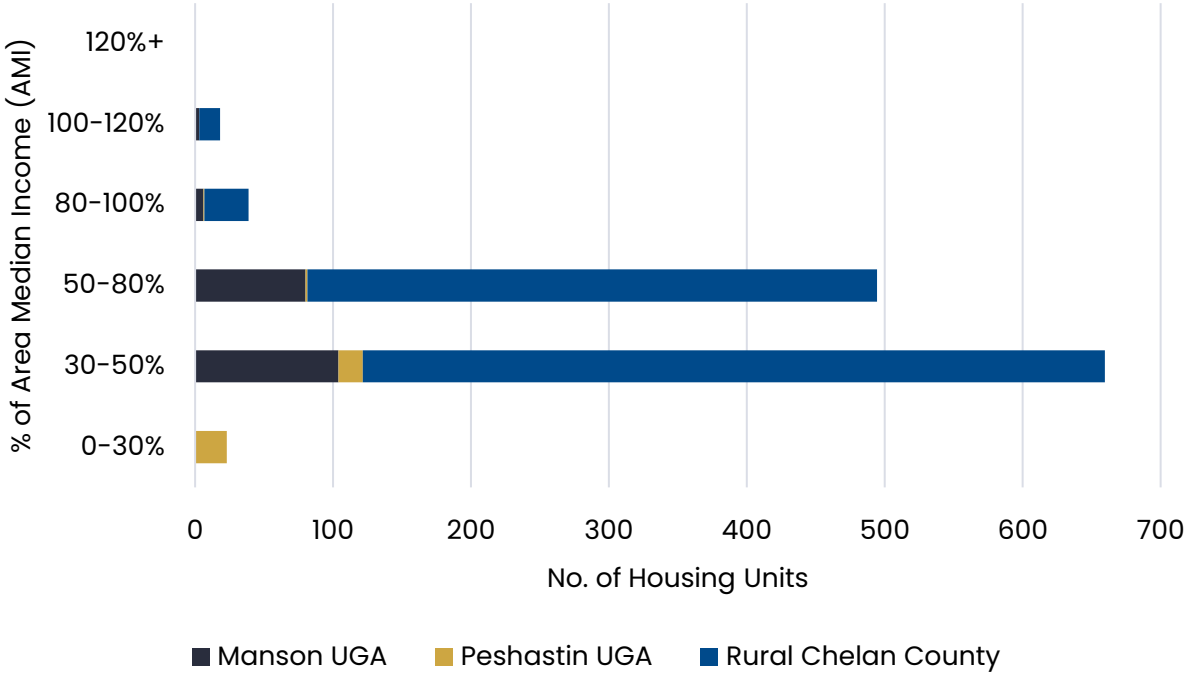
Estimating Housing Supply, 2024–2026

A three-year moving average of the total number of dwelling units built from 2021 to 2023 is used to forecast housing production in subsequent years. This average is applied as follows: the 2021–2023 average is used to estimate 2024 housing production; the 2022–2024 average informs the 2025 estimate; and the 2023–2025 average is used for the 2026 projection.

Estimated Housing Supply, 2021–2026

Figure 3.3 shows the estimated total housing supply by affordability level for the years 2021 to 2026. The graph indicates that the majority of housing during this period is expected to be built in rural areas of the County.

Determining Affordability of the Estimated Housing Supply



To estimate the affordability level of new housing units, the project team used different methods based on housing type. For single-family and two-unit structures, affordability was calculated using mortgage payment estimates. These were compared against income levels derived from the U.S. Department of Housing and Urban Development's (HUD) Median Family Income (MFI) data to determine affordability at various Area Median Income (AMI) levels.

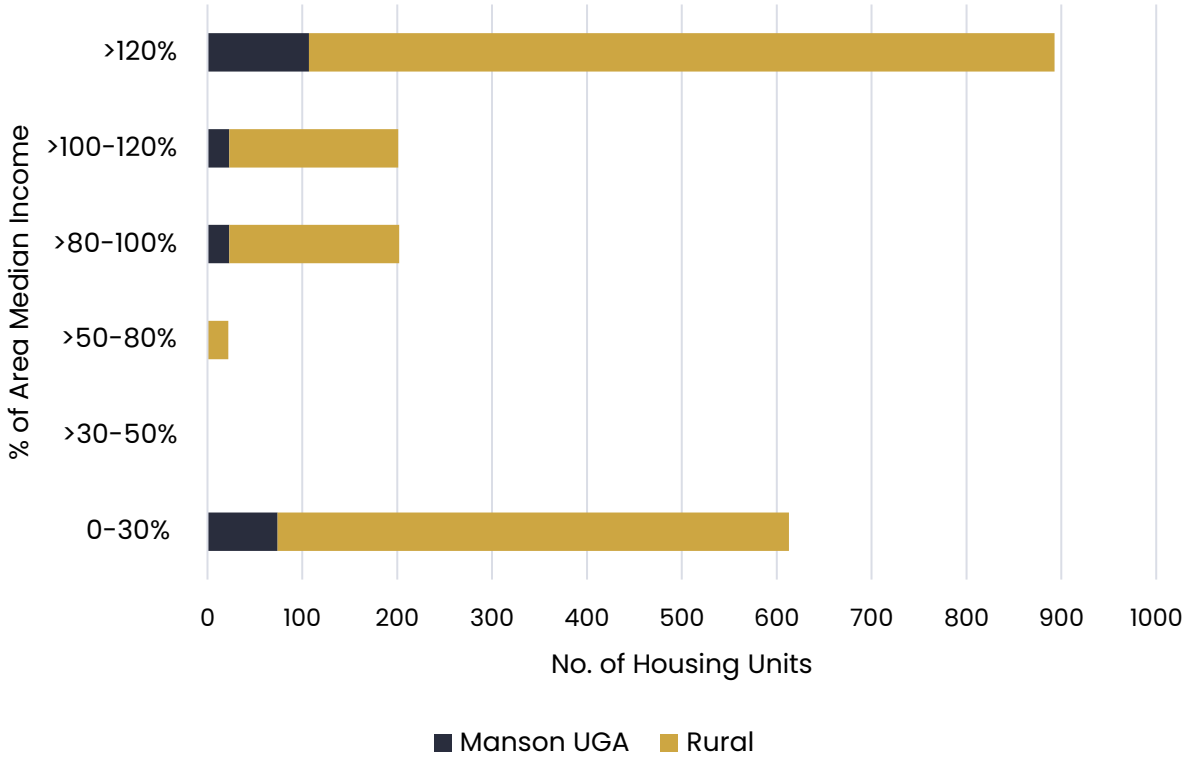
For structures with five or more units, the team used HUD's Fair Market Rents (FMRs) to assess affordability.

A detailed breakdown by unit count can be found in Appendix A.

DRAFT

Figure 3.3: Estimated Housing Supply by Region and Income Level, 2021–2026

Source: Housing for All Planning Tool, Method A; WCRER Housing Permit Data; HUD Area Median Incomes; HUD Fair Market Rents



Housing Demand by Income Level 2027–2046

The project team calculated housing demand for the planning period of 2027 to 2046 by subtracting the estimated housing supply built between 2020 and 2026 from the total projected housing demand for 2020 to 2046. The substantial number of units built in the 30–50% AMI range during 2021–2026 suggests that this need has been met, and therefore, no additional units are required in this income category over the next 20 years.

Based on the current housing supply, Manson will need approximately 74 low-income multifamily units and 107 single-family units between 2027 and 2046. The remainder of rural Chelan County will require 539 low-income multifamily units and 786 single-family units during the same period (Figure 3.4).

DRAFT

Figure 3.4: Housing Demand by Region and Income Level, 2027–2046

Source: Housing for All Planning Tool, Method A; WCRER Housing Permit Data; HUD Area Median Incomes; HUD Fair Market Rents

Temporary Emergency Housing Demand

The HAPT model produced housing unit needs for temporary, emergency housing. According to the model, the County will need 302 additional units by 2046. Approximately 10 of these will be located in the Manson UGA, and 75 will be located in the rural county.

DRAFT

4. Residential Land Capacity Analysis

Purpose

The Residential Land Capacity Analysis (LCA) identifies Vacant, Potentially Redevelopable, and Underutilized residential land in unincorporated Chelan County, which includes all rural areas of Chelan, as well as the Manson and Peshastin Urban Growth Areas (UGAs). The analysis identifies areas that have the potential to be developed with new or additional residential development to accommodate housing needs for the next twenty years (2027–2046).

An additional evaluation was conducted for the Malaga Limited Area of More Intense Rural Development (LAMIRD), which is recognized by the State of Washington as an area intended for:

- Intense rural development and the containment of low-density sprawl
- Small-scale commercial uses that rely on a rural location
- Small-scale economic development and employment consistent with rural character
- Redevelopment of existing industrial areas within rural areas

Findings from this analysis are shown in Appendix C.

This chapter outlines the key assumptions and the methodology the Points Consulting (PC) project team used to create an inventory of Vacant, Potentially Redevelopable, and Underutilized parcels. The geographic scope of the residential LCA includes all unincorporated land in Chelan County.

Assumptions

The study is based on the following assumptions:

1. The project team acquired the following densities from local zoning codes and the Comprehensive Plan. They serve as the baseline density assumptions for the LCA:
    - PC assumed that land in each zoning district will be developed to the highest allowable density. For example, a zone designated for multifamily housing is not assumed to develop single-family housing.
    - Each residential density has been adjusted downward to create an "assumed density," as it is unlikely that development will occur at the maximum allowed density in every zone. Many zones also include a range of densities, requiring reasonable assumptions.
    - Only one rural zone (rural village, RV) permits multifamily dwellings. While the density standards do not explicitly state that RV has the highest

DRAFT

residential density, PC assumed that the RV zone will develop at the highest density.

- See the Zoning Dictionary in Appendix A for detailed descriptions of each zone.

Table 4.1: Zoning Densities and Assumptions

Zone	Density	Density Assumption
Manson UGA		
UR1	4	3
UR2	8	6
UR3	12	9

RW	0.5-3.5	1.5
RRR	0.5-3.5	1
RV	0.4+	3
RC	No Limit	0.5

Source: Chelan County Zoning Code

2. PC assumed that land under certain types of ownership or existing uses will not be converted to residential use, even if it is zoned for residential development. when zoned for residential purposes. These ownership types or uses include the following:
    - Government-owned parcels
    - School District-owned parcels
    - Tribal-owned parcels
    - Fire District-owned parcels
    - Public/Quasi-Public land, Recreational land (parks, golf courses, etc.)
    - Cemeteries
    - Churches
    - Condominiums and Condo Public Spaces
3. **Market Factors:** PC assumed approximately 25% of the land will not develop due to market constraints such as unwilling sellers or buyers, lack of developer

interest, or landowners choosing to conserve property through land trusts. Therefore, PC made this reduction from the land inventory.

- **Potentially Redevelopable**: PC assigned these parcels an assumed market factor of 35%. They are less likely to be developed with additional housing compared to Vacant land due to the presence of existing residential structures.
- **Underutilized**: PC assigned these a higher market factor of 50%, as they are the least likely property classification to redevelop. While not used to their full potential, these parcels are already fully developed for residential purposes, making redevelopment less probable than for Potentially Redevelopable properties.
- **City of Chelan Adjustment:** PC made an additional, community-specific adjustment for the City of Chelan to account for a planned development at the Apple Blossom Center. This multifamily development allows a maximum density of 24 dwelling units per acre, with a total cap of 720 units. This special district is reflected in the City of Chelan's figures and tables as "ABMF."

4. **Public Infrastructure and Roads:** PC assumed that as development occurs, nearly 25% of the land in the inventory will be used to accommodate public infrastructure and public rights-of-way necessary to support future development.
5. **Vacant:** PC classified parcels with an improvement value of $10,000 or less as Vacant.
6. **Potentially Redevelopable:** PC classified residential parcels as Potentially Redevelopable if they are not considered Vacant (i.e., they have an improvement value greater than $10,000) and have an improvement-to-land value ratio of less than 1.0. This classification assumes that such parcels could be redeveloped to accommodate additional housing. The improvement-to-land ratio is equivalent to a 33% improvement-to-total assessed value ratio.
    - For instance, if the total assessed value of a parcel is $200,000, and the improvement value is $50,000, the land value would be $150,000. PC would classify this parcel as Potentially Redevelopable. It is not considered Vacant because the improvement value exceeds $10,000, but it qualifies as Potentially Redevelopable because the improvement value is less than the land value.
7. **Underutilized:** This category of land inventory includes residential parcels assumed to be underutilized (those that do not fall in either the Vacant or Potentially Redevelopable categories). Underutilized parcels are developed at a lower density than what is permitted by the zoning district in which they are located.

DRAFT

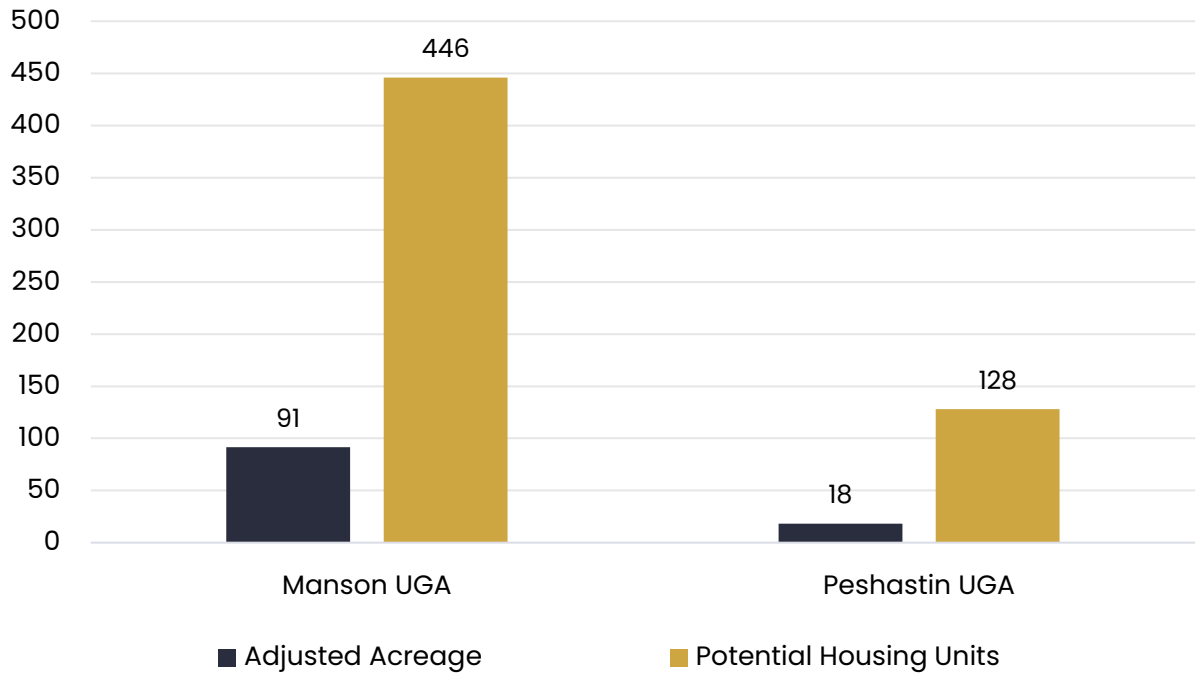
- For example, parcels that are assigned a Department of Revenue (DOR) Code of 11 (Residential Single Family) but located in a zone with higher maximum density (such as RM in Wenatchee) are considered Underutilized.
- In another case, both Wenatchee and Peshastin have parcels located in high-density zones (such as RH) that are designated as DOR Code 12 (2–4 unit) parcels. PC also considers these parcels Underutilized, as the existing 2–4 unit structures do not maximize the development potential allowed by zoning.

Methodology to Create Land Inventory

PC began this analysis with a comprehensive evaluation of all parcels in unincorporated Chelan County, as well as the City of Chelan. Using the above noted assumptions, PC took the following steps to create the land inventory.

1. PC used local zoning codes to identify and extract all parcels zoned for residential development in all the Urban Growth Areas and rural areas of the County.
2. Subsequently, PC segregated the residential parcels by zoning districts to identify land that could be developed with single-family dwellings and multifamily residential development.
3. PC removed the following from the inventory: parcels that are government-owed; owned by school districts, tribes, fire districts, or homeowner associations; designated as public or quasi-public land; used for recreation (e.g., parks, golf courses); reserved for cemeteries; or developed with churches.
4. PC removed parcels from the land inventory containing steep slopes of over 15% grade and those located within FEMA Special Flood Hazard Area Zones A, AE and AO.
5. PC deducted 25% of the remaining land area from the inventory to accommodate market factors.
6. We deducted 25% of the remaining land area from the inventory to accommodate development of public infrastructure and roads to support future development.
7. PC separated the remaining inventory into three different categories using improvement values, land values and Department of Revenue (DOR) tax codes based on the assumptions noted above. The three categories of land inventory are:
    a. Vacant
    b. Potentially Redevelopable
    c. Underutilized

DRAFT



8. PC multiplied the area of land (in acres) from the land inventory by the assumed residential densities for each zoning district (as noted in the assumptions above) to estimate the potential number of housing units that could be accommodated on that land.

Vacant Land Inventory and Potential Housing Units Supply

As noted in the assumptions, parcels with an improvement value of less than $10,000 are classified as Vacant. Figure 4.1 below and Tables 4.2–4.4 show Vacant land inventory derived using the assumptions and methodology noted in the previous section.

Figure 4.1 depicts the Vacant land available in unincorporated Chelan County. These areas include the two unincorporated towns of Manson and Peshastin, which are recognized as UGAs. The figure shows the potential number of housing units that could be developed on the available, adjusted acreage.

Figure 4.1: Chelan County Unincorporated Urban Growth Area Vacant Residential Land and Potential Units

Potentially Redevelopable Land Inventory

As defined in this study's assumptions, residential parcels not classified as Vacant (specifically, those with an improvement value over $10,000 and an improvement-to-total taxable value ratio of less than 0.33) are considered Potentially Redevelopable. This threshold is more conservative than those used in some other residential land capacity analyses, due to the undervaluation of highly sought-after parcels and structures in Chelan County, where scenic views drive high demand.

These parcels have improvement values lower than their land values, indicating potential for redevelopment to accommodate more housing. However, recognizing that not all parcels will be redeveloped, PC applied a 35% market factor to the estimates. This effectively eliminates 65% of the acreage.

Figure 4.2 shows all Potentially Redevelopable land available within the unincorporated UGA boundary.

Underutilized Land Inventory

As noted in the study assumptions, Underutilized land refers to residential parcels that are not classified as Vacant or Potentially Redevelopable but are assumed to be developed at a lower density than allowed by their zoning. These parcels do not meet the criteria for the other categories but still represent opportunities for additional housing development. The assumptions section of this chapter provides examples to illustrate how PC identified these parcels.

Figure 4.3 shows the amount of land classified as Underutilized in the unincorporated UGAs of Chelan County, along with the potential number of housing units that could be accommodated if the land were developed to its maximum zoning capacity.

A cluster of parcels located within the City of Wenatchee's boundaries are zoned under county designations, despite being situated in high- and medium-density areas. Technically, these parcels are not part of the City of Wenatchee. Many are currently underutilized and are included in this portion of the analysis.

5.Housing Demand vs. Supply

The previous chapters in this study have laid the groundwork for evaluating whether current zoning regulations and the available land inventory can meet the projected housing demand in Chelan County over the next two decades. By comparing the estimated housing supply in each zoning district to the anticipated demand from 2027 to 2046, the analysis identifies potential gaps or surpluses in housing availability. This type of assessment is critical for long-term urban planning, helping ensure that enough land is appropriately zoned (and that sufficient land exists overall) to accommodate population growth and housing needs without overburdening infrastructure or underutilizing available space.

DRAFT

Relationship between Zoning Districts and Housing Affordability

For the purposes of this study, it is assumed that single-family dwellings developed over the next two decades will provide housing opportunities primarily for earners making more than 120% of the Area Median Income (AMI). This applies to all zoning districts in the County where only single-family dwellings are permitted, such as UR1 in Manson, R-1 in Peshastin, and RR 2-20 in rural Chelan County.

Similarly, PC assumes duplex and multifamily dwellings developed during the same period will serve earners above 120% of AMI. This includes all zoning districts in the County's urban areas that allow duplexes and multifamily units, such as UR2 in Manson, R-2 in Peshastin, and RV in rural Chelan County.

More specifically, PC expects only two zoning districts in rural areas, — UR3 (high-density Manson) and R-3 (upper-medium and high-density Peshastin) — to provide affordable housing opportunities for earners below 50% of AMI. PC expects all other zoning districts permitting duplexes and multifamily dwellings to serve earners with incomes ranging from 50% to 120% of AMI.

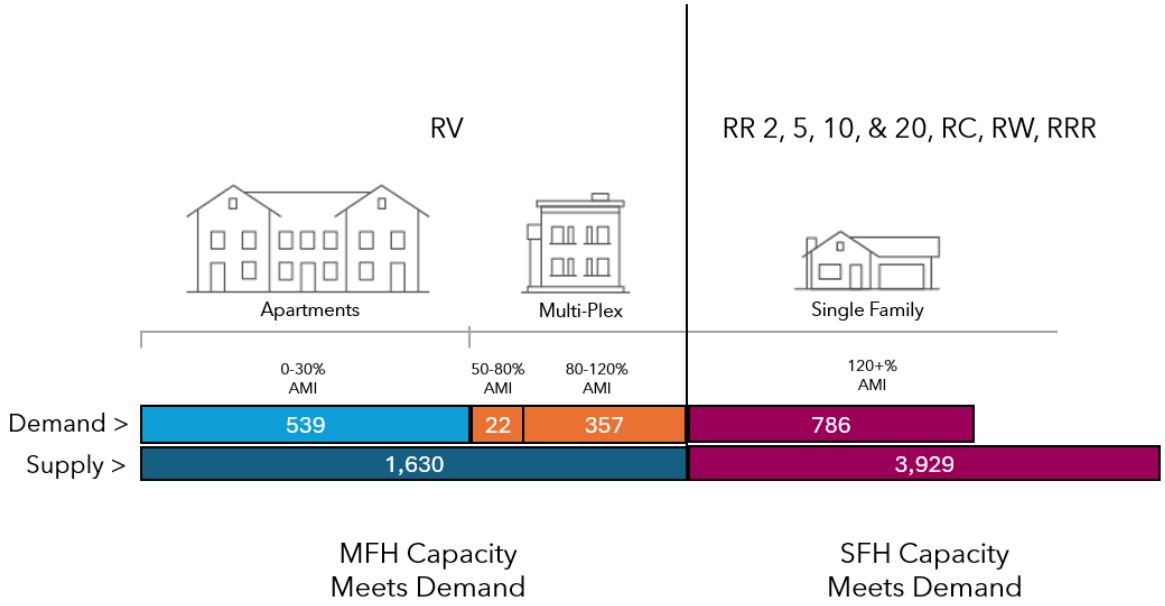
Findings

This section compares the total housing demand with the estimated housing supply the region can support based on current land zoning. As shown in Table 5.1 and Figures 5.1 and 5.2, every region has sufficient supply to meet future housing needs driven by population growth. Please note that Peshastin has zero projected housing demand by 2046 and is therefore excluded from these findings.

Table 5.1: Housing Demand vs. Supply

Region	Total No. of Dwelling Units Demanded	Total No. of Possible Dwelling Units	Supply Meets Demand?
Manson UGA	227	1,110	Yes
Rural Chelan County	1,704	5,559	Yes

Source: Housing for All Planning Tool Method A; WCRER Housing Permit Data; HUD Area Median Incomes; HUD Fair Market Rents



Residential areas in rural Chelan County generally favor single-family, sprawling developments with large properties. However, the Rural Village (RV) zone permits multiplex and apartment-style dwellings. This zone is part of a Limited Area of More Intensive Rural Development (LAMIRD), along with Rural Commercial (RC), Rural Waterfront (RV) and Rural Recreational/Residential (RRR) zones. Outside of RV, the other zones are intended primarily for single-family use, though some allow for higher densities than others.

DRAFT

Given the amount of underutilized space in Rural Village areas, there is sufficient land available to meet future housing demand. However, if this underutilized space were unavailable, the demand for multifamily dwellings would not be fully met.

It should be noted that RC is considered single-family in this portion of the analysis since the RC land will primarily be developed for commercial purposes, not for residential purposes.

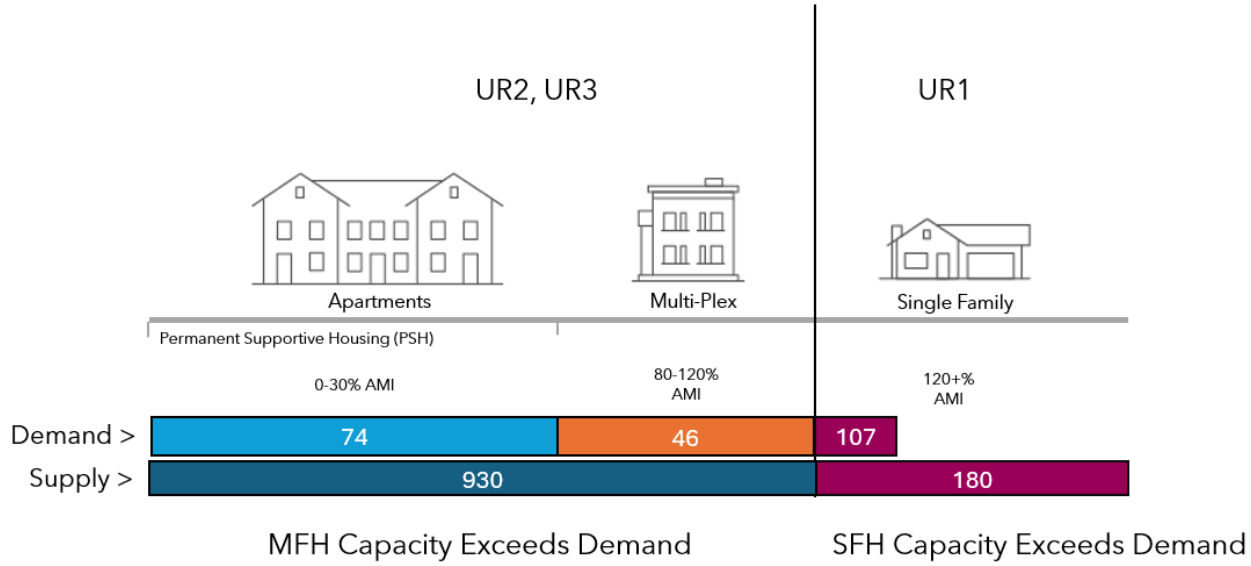


Figure 5.1: Rural Chelan County Residential Supply and Demand

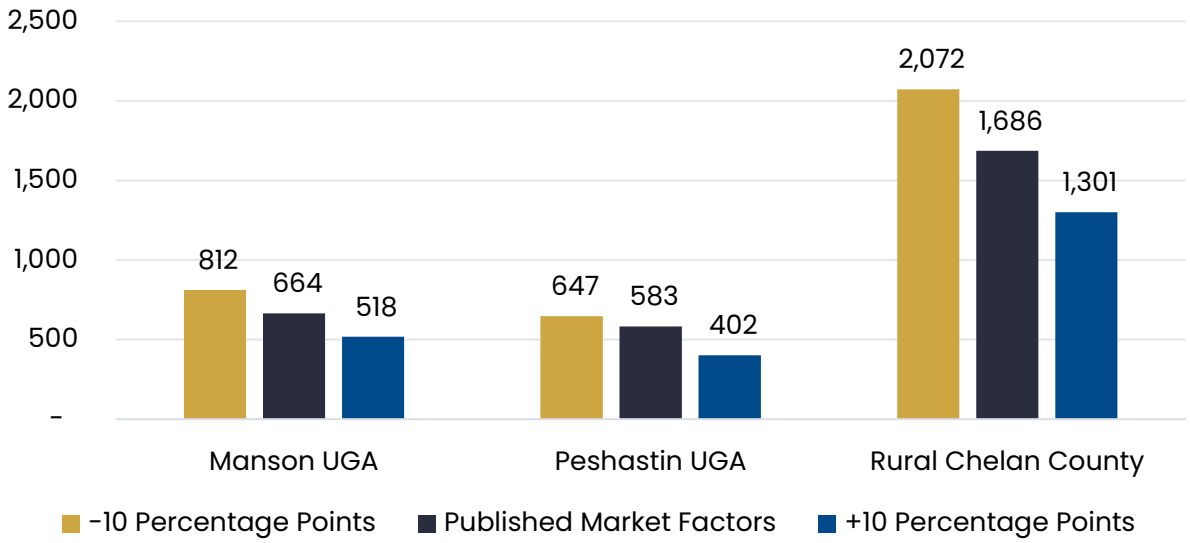
Source: Washington State Department of Commerce; Housing for All Planning Tool, Method A; WCRER Housing Permit Data; HUD Area Median Incomes; HUD Fair Market Rents

The Manson UGA area, shown in Figure 5.2, meets both single-family and multifamily housing needs. Similar to rural Chelan County, much of the multifamily demand is accommodated by underutilized parcels in the UR2 and UR3 multifamily districts. Additionally, the remaining Vacant and Potentially Redevelopable land in the UR1 zones satisfies the demand for single-family housing.

Figure 5.2: Manson UGA Residential Supply and Demand

Source: Washington State Department of Commerce; Housing for All Planning Tool, Method A; WCRER Housing Permit Data; HUD Area Median Incomes; HUD Fair Market Rents

Potentially Redevelopable and Underutilized Market Factor Sensitivity Analysis



PC performed a sensitivity analysis to ensure final capacity findings were not adversely impacted by Potentially Redevelopable and Underutilized housing unit potential estimates.[1] A sensitivity analysis adjusts a factor of interest (in this case, the market factor) by 10 percentage points in either direction to assess how the outcome would change if the actual value differs from the predicted one. The baseline market factors used in the initial study were as follows:

- Potentially Redevelopable: 35%
- Underutilized: 50%

Figure 5.3 illustrates the market factor sensitivity analysis, presenting high, medium, and low estimates of housing unit potential. For rural Chelan County, Potentially Redevelopable and Underutilized properties could accommodate between 1,301 and 2,072 housing units.

[1] For the capacity findings presented earlier in this chapter, PC used the housing unit potential based on the "Published Market Factors."

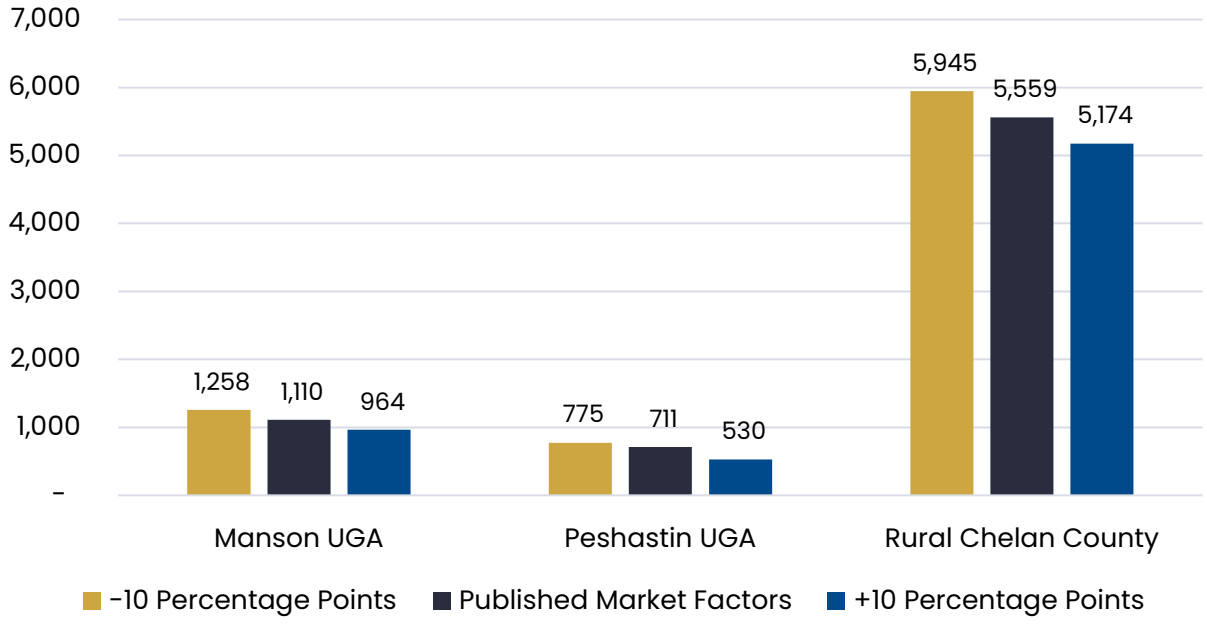


Figure 5.3: Sensitivity Analysis for Potentially Redevelopable and Underutilized Parcels

Source: City and County of Chelan

Figure 5.4 shows the total housing supply for each region over the next 20 years. For each jurisdiction, PC found that the supply for the next 20 years will meet the total housing demand based on the population allocations adopted by the County. This holds true even when using the lower market factors to estimate housing potential from Potentially Redevelopable and Underutilized properties.

Appendix C. Malaga UGA LCA

At the request of the County, PC conducted an LCA on residential land in the Malaga LAMIRD. The Malaga LAMIRD currently follows Chelan County's zoning code and has multiple areas of residential development. A detailed map of the Malaga LAMIRD can be found in Appendix B.

In addition to the LCA conducted for the Malaga LAMIRD area, our team attempted to identify the changes that would occur to the County's supply and demand of residential land if the Malaga LAMIRD were to become an Urban Growth Area. This process followed the methodology from Chapters 2 through 4 as close as possible. However, the lack of data in Malaga was a limiting factor. Malaga is currently considered a part of the unincorporated county, and as such has no distinction as a city or UGA in datasets, either within the State of Washington or federally. Consequently, the project team decided to estimate supply and demand without AMI levels, or an estimate on current housing production from 2021 – 2026, instead opting to build upon the previous steps taken earlier in this report and the parcel data available.

Malaga Population and Housing Estimates

The project team estimated the population and housing supply in the Malaga LAMIRD using a combination of sources, including the County's population and housing allocations, current vacancy and occupancy rates, and average people per household (PPHH). This approach provided the information needed to assess the exiting housing stock and project future demand based on expected population growth of the rural county areas. Although the State does not provide or endorse these estimates, the methodology offers a useful snapshot of current conditions in Malaga.

The Malaga LAMIRD area currently has a large portion of single-family units, which are mostly found in Rural Recreational/Residential (RRR) or Rural Village (RV) zones. These two zoning types make up more than 85% of the Malaga LAMIRD's housing units. The Rural Village zone also holds an estimated 6 multi-family housing units, which range from duplexes to quadplexes. Assuming an average of 3 housing units per multi-family parcel, these lots provide 18 additional housing units to the current supply in the Malaga LAMIRD.

Using the estimated number of housing units in Malaga from parcel data, the population of the area can be derived using the surveyed occupancy rate of those units, and the PPHH in the area. Unincorporated Chelan County was found to have a PPHH of 1.75, and the Malaga Census County Division vacancy rate was approximately 12.3%. Knowing this, the 699 housing units likely hold a population around 1,073 in the Malaga LAMIRD.

Estimated Population	**--**	**--**	**1,073**

Source: Washington Office of Financial Management, Chelan County, US Census Bureau ACS 5-year Estimates

Table C.2 shows the Malaga LAMIRD population projection. This estimate was derived from the County estimate found in Chapter 2, which utilized the Washington Office of Financial Management's projections and were adopted March 5, 2024. The Malaga LAMIRD area accounts for approximately 4.4% of the rural Chelan County's population. If this share remains constant over time, the population is projected to grow by 168 people. The area will need an estimated 109 additional housing units to accommodate this growth.

Table C.2: Malaga LAMIRD Population and Housing Projections, 2024 - 2046

	2024	2026	2030	2035	2040	2046	Change

Residential Land Capacity Analysis

Tables C.3 through C.5 show the results of the Land Capacity Analysis, which was conducted using the methodology found in Chapter 4. Using the same density assumptions, the RV zones have the most housing unit potential in the LAMIRD area. There are also 42 acres of vacant RR land available, which provides space for single-family housing at a low density. RV can also be utilized for single-family housing if needed. Overall, the Malaga LAMIRD area has an additional capacity for approximately 549 housing units if it is built to a higher density in the RV zoned areas.

Table C.5: Malaga LAMIRD Underutilized Residential Land

Zone	Adjusted Acreage	Housing Unit Potential
RV	92	277

Source: City and County of Chelan, 2024

Tables C.6 and C.7 show the new relationship between a possible future Malaga UGA and the updated rural Chelan County totals without Malaga's contributions. With these changes, rural Chelan County has an updated demand of 1,595 units, which is lower than the initial 1,704 units found in the County's LCA.

The Malaga LAMIRD area currently holds around 31% of the rural County's multi-family (RV) land supply, meaning that if the County lost this land to the Malaga UGA, it would be important to build at higher densities for the remaining RV zones in the rural areas to meet the projected demand. Single-family housing remains a non-issue for both the Malaga LAMIRD and rural county areas.

It is important to remember that these changes reflect a constant rate of growth from Malaga, assuming that its share of the population within Chelan County remains stable. Given the Malaga LAMIRD is a place of more intense development and focus, it is possible that there is a higher demand for housing in the area than presented in this sub study. However, an increase in demand by even hundreds of housing units would not change the outlook for rural Chelan County over the next 20 years. The County should still have a large enough supply of land to account for future demand. The only possible situation in which the County comes short of demand needs is if the Rural Village areas are not built to accommodate multi-family housing. If the supply of RV land is shifted to single-family housing, the County could then run short of lower-income housing opportunities for the population.

Appendix I. Racially Disparate Impacts Policy Evaluation Framework

The following evaluation criteria were provided by the Washington State Department of Commerce for evaluation of housing policies. Table I.2 contains a review of the housing policies from the 2017 Comprehensive Plan following this framework.

Table I.1: Evaluation Criteria for Racially Disparate Impacts

Criteria	Evaluation
The policy is valid and supports meeting the identified housing needs. The policy is needed and addresses identified racially disparate impacts, displacement and exclusion in housing.	Supportive
The policy can support meeting the identified housing needs but may be insufficient or does not address racially disparate impacts, displacement and exclusion in housing.	Approaching
The policy may challenge the jurisdiction's ability to meet the identified housing needs. The policy's benefits and burdens should be reviewed to optimize the ability to meet the policy's objectives while improving the equitable distribution of benefits and burdens imposed by the policy.	Challenging
The policy does not impact the jurisdiction's ability to meet the identified housing needs and has no influence or impact on racially disparate impacts, displacement, or exclusion.	N/A

Source: Washington State Department of Commerce

Table I.2: Policy Evaluation for Racially Disparate Impacts

Existing Goal/Policy #	Existing Goal/Policy	Equity Assessment	Why
Goal H 1	Encourage the availability of affordable housing to all economic segments of the population of the county	Supportive	This ensures there are affordable options for all people in the county
Policy H 1.1	Encourage communities within the County to provide a fair share of affordable housing to low and moderate income households by promoting a balanced mix of diverse housing types	Supportive	A variety of housing allows for opportunities for all residents to have proper housing that they can afford

DRAFT

Existing Goal/Policy #	Existing Goal/Policy	Equity Assessment	Why
Goal H 2	Promote a variety of residential densities and housing types	Supportive	A variety of housing allows for opportunities for all residents to have proper housing that they can afford
Policy H 2.1	Promote a diversity of housing unit types and densities to meet the needs of all existing and future residents of the County, including both site- built and manufactured and modular homes	Supportive	A variety of housing allows for opportunities for all residents to have proper housing that they can afford
Policy H 2.2	Encourage development of housing types that meet the needs of the elderly, physically challenged, mentally impaired, and special needs segments of the population (e.g., congregate care facilities)	Supportive	Encouraging housing to support the needs of all populations helps mitigate negative effects on special needs populations
Policy H 2.3	Where appropriate, provide for higher density residential housing developments within existing residential communities and urban growth areas, where adequate infrastructure and services can be provided	Supportive	Higher density tends to lead to lower housing costs, making housing more accessible to all groups.
Policy H 2.4	Encourage appropriate placement and use of vacation rentals	N/A	
Goal H 3	Encourage the appropriate preservation of existing housing stock	Supportive	Preservation of existing housing stock, especially low-income housing stock, decreases risk of displacement

DRAFT

Existing Goal/Policy #	Existing Goal/Policy	Equity Assessment	Why
Policy H 3.1	Where appropriate, encourage the retention and revitalization of existing housing stock with methods such as: a) Permitting accessory housing or the division of existing structures in single family neighborhoods; and, b) Protecting existing manufactured home parks and permitting manufactured homes on single family lots; and, c) Participating in or sponsoring housing rehabilitation programs offered by the state and federal government.	Supportive	Preservation and rehabilitation of existing housing stock, especially low-income housing stock, decreases risk of displacement
Policy H 3.2	Support and encourage the retention, rehabilitation and weatherization of existing housing units	Supportive	Preservation and rehabilitation of existing housing stock, especially low-income housing stock, decreases risk of displacement
Goal H 4	Support regulatory changes and economic programs that promote affordable housing options	Supportive	Promotion of affordable housing options ensures they are accessible to all populations
Policy H 4.1	Provide incentives for projects that enhance or provide lower cost or specialty housing types such as congregate care facilities	Supportive	This ensures there are options for those populations with special needs
Policy H 4.2	Where appropriate, establish incentives for developers to provide housing affordable to low and moderate income households	Supportive	Incentivizing affordable housing means there will be better, more affordable options for all groups
Policy H 4.3	Support the Housing Authority and other housing programs with financial and technical support, when appropriate	Supportive	The Housing Authority works with all populations in need to ensure they are able to find suitable housing. Supporting them will allow them to fulfill their mission

Existing Goal/Policy #	Existing Goal/Policy	Equity Assessment	Why
Policy H 4.4	Support the Housing Authority or other agency's efforts to acquire and development lands for low income housing	Supportive	Ensuring that those who would like to build affordable housing are able to allows for more affordable options for all populations
Policy H 4.5	Identify high-priority areas for housing redevelopment, rehabilitation, and revitalization, and participate in federal rehabilitation programs as appropriate	Supportive	Identifying which areas need more revitalization helps the county know how to focus it's efforts to making housing available for all
Policy H 4.6	Major concentrations of housing should be located in areas with access to existing and projected transportation systems to minimize expansion of road systems	Supportive	Concentrating housing in areas with transportation options allows for a better quality of life for those that need affordable housing
Goal H 5	Support year-round and seasonal agricultural worker housing	N/A	
Policy H 5.1	Protect the economic viability of the agricultural industry by supporting construction of agricultural worker housing near orchards. Consider the reduction of site development standards and building fees for agricultural housing units.	N/A

Chelan County Capital Facilities Information

This table is intended to supplement Appendix J, Capital Improvement Plan (see subsequent pages) and the Chelan County Capital Facilities Element. Where providers have listed capital needs or improvements, the source information is included here. Most providers do not list a level of service standard; refer to the text of the Capital Facilities Element for more information.

Facility/Provider	Supporting Document	Useful Information	Notes
Schools			
Wenatchee School District	https://www.wenatcheeschools.org/facilities	Facilities & Capital Projects Home Website	The 2024 facilities plan includes a long-range plan that does not identify capacity needs due to the use of portables, but that does identify need to replace or significantly remodel Wenatchee High and modernize three elementary schools by 2035.
Wenatchee School District	https://drive.google.com/file/d/1gAJj6mwUeNyRxn2KIYz9cOFfgfU3F-nP/view	Facilities Master Plan	The master plan anticipates decreasing enrollment over the next several years. However, Wenatchee High will have a very high utilization rate that limits program flexibility. A bond for replacement of the high school is on the November 2026 ballot.
Cascade School District	2026.03.26_Capital-Facilities-Element-Public-Review-Draft.pdf	Draft Leavenworth 2026 Comp Plan	The Leavenworth Comprehensive Plan provides LOS and capital improvement plans for facilities, including schools, within the jurisdiction; refer to the Leavenworth Plan for specifics.
Cashmere School District	feb8worksession.pdf	Bond information	Cashmere schools bond history identifies the need to modernize the high school, no needs are identfied at this time.

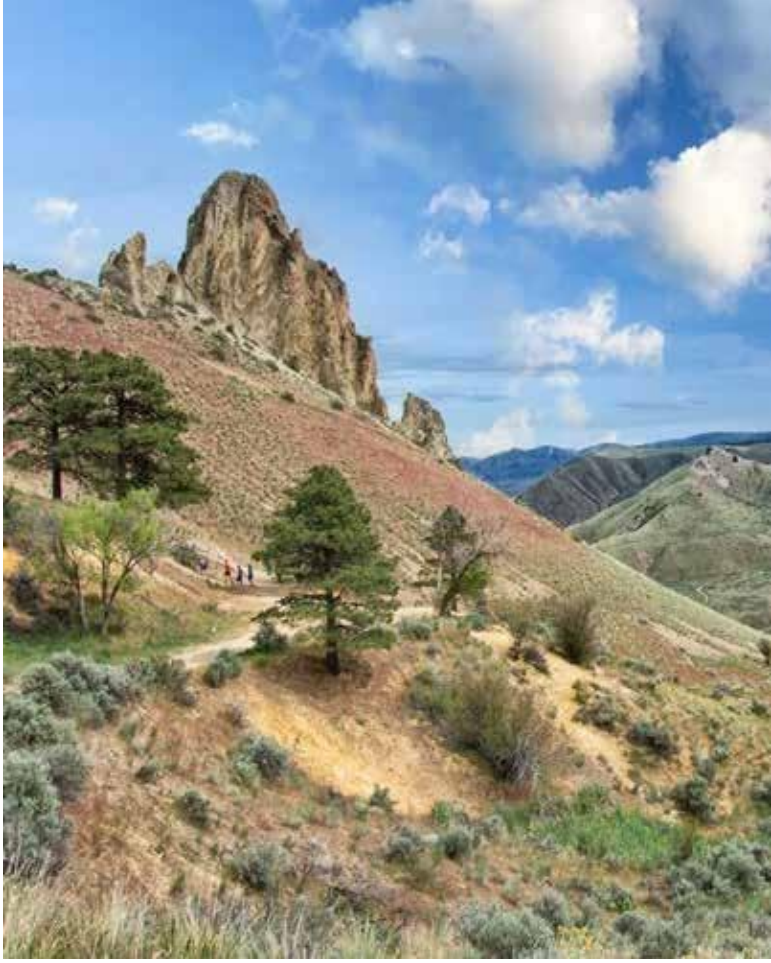
Summary

Chelan County's Recreation Element of its Comprehensive Plan, also known as a Parks, Recreation, Open Space, and Trails (PROST) Plan, examines the County's parks, recreation, and open space assets and engages the public in determining their desired quality of life and the appropriate level of recreational service to be provided, then outlines recommended improvements to form a basis for future capital improvement planning. This plan has been prepared in compliance with State of Washington Growth Management Act requirements and serves as the County's strategic plan to deliver parks & recreation services to the community, and complements the policy framework identified in Chelan County's Comprehensive Plan's Parks and Open Space Element. Additionally, the plan has been developed in compliance with the Washington State Recreation and Conservation Office guidelines.

This plan inventoried and analyzed the County's existing parks and trails, not just within Chelan County's purview but also all publicly-owned open space lands. The plan examines the County's parks and recreation service levels in comparison to its current and future projected demographics and in comparison to other Counties and national recreational standards. In this comparison, Chelan County was found to have a lower-than-average ratio of developed park acres to County population; however, it does have a much higher-than-average ratio of public land open to the public.



The planning process engaged the County's residents through a robust public engagement process, including a long-running public online survey and several public workshops in different areas of the County. Participation in the process demonstrated a high level of public enthusiasm toward improved recreational access. Overall, the current level of service provided by the County's parks, recreational facilities, open spaces, and trails was found to be lacking, with many trails and access points overwhelmed. However, an interest in specific additions and improvements generated by the public was captured, including support for additional funding and revenue sources to fill in the missing gaps, and an increase in development and management of current unmanaged or under-managed trailheads and access points. The Plan integrates the Motorized Trails Plan, which was developed concurrently with the PROST Plan.

Overview

Introduction

Welcome to Chelan County's Recreation Element of its Comprehensive Plan, also known as a Parks, Recreation, Open Space, and Trails (PROST) Plan. This document is crafted to meet the Growth Management Act (GMA) requirements and maintain the County's eligibility for Washington State Recreation and Conservation Office (RCO) funding, along with other potential funding sources, over the next six years and beyond.

This document provides a comprehensive overview and assessment of the County's parks, recreation areas, open spaces, and non-motorized trails. It aslo includes the Motorized Trails Plan, which was developed concurrently with the PROST Plan. The plan captures the community's recreational needs and preferences through surveys, public outreach initiatives, and online tools.
Furthermore, the plan establishes a vision, sets planning goals, and evaluates the current level of service offered by the existing mix of County parks and open spaces.

The Capital Improvement Plan (CIP) is an integral component of this document and, upon formal approval and adoption, finalizes the Recreation Element. It outlines a series of recommended improvements designed to enhance services for the citizens of Chelan County over the next six years and beyond. These recommendations are strategically tied to potential grant funding sources, guiding the County's response and prioritization to align with the desired quality of life envisioned by its citizens.

Purpose

This update evaluates the effectiveness of the County of Chelan County's parks, open spaces, and trails, in conjunction with local and regional parks and recreation assets, in meeting the community's needs. Enclosed within this comprehensive plan are both functional and aspirational goals, objectives, and desires, presenting recommendations for improvements and changes to align with the evolving recreational demands of the community.

Functioning as a dynamic six-year strategic guide and aspirational plan, it outlines strategies for managing and enhancing the County of Chelan County's parks, trails, open spaces, and recreation services. This plan establishes an implementable framework aimed at realizing the community's desired quality of life in relation to its parks, recreation areas, trails, green open spaces, and recreational opportunities. Additionally, it offers a visionary perspective for the County's park and recreation system, suggesting updates to level-of- service standards for park and facility classifications. It addresses departmental and community-wide goals, objectives, and other management considerations, ensuring the continued provision of high-quality recreation opportunities for the benefit of the Chelan County community.

Developed through direct input and guidance from County residents, County staff, and Planning Commission, this update conducts a thorough inventory and evaluation of existing park and recreation areas. It assesses how well the County's parks, open spaces, and trails, in collaboration with other local and regional parks and recreation assets, serve the County's residents. Furthermore, it proposes strategic improvements and changes to meet the evolving recreational demands and needs of the community. Additionally, the plan evaluates conditions for acquisition, site development, financing options, and operational improvements. It concludes by offering a set of policies and recommendations designed to support the community's desired quality of life.

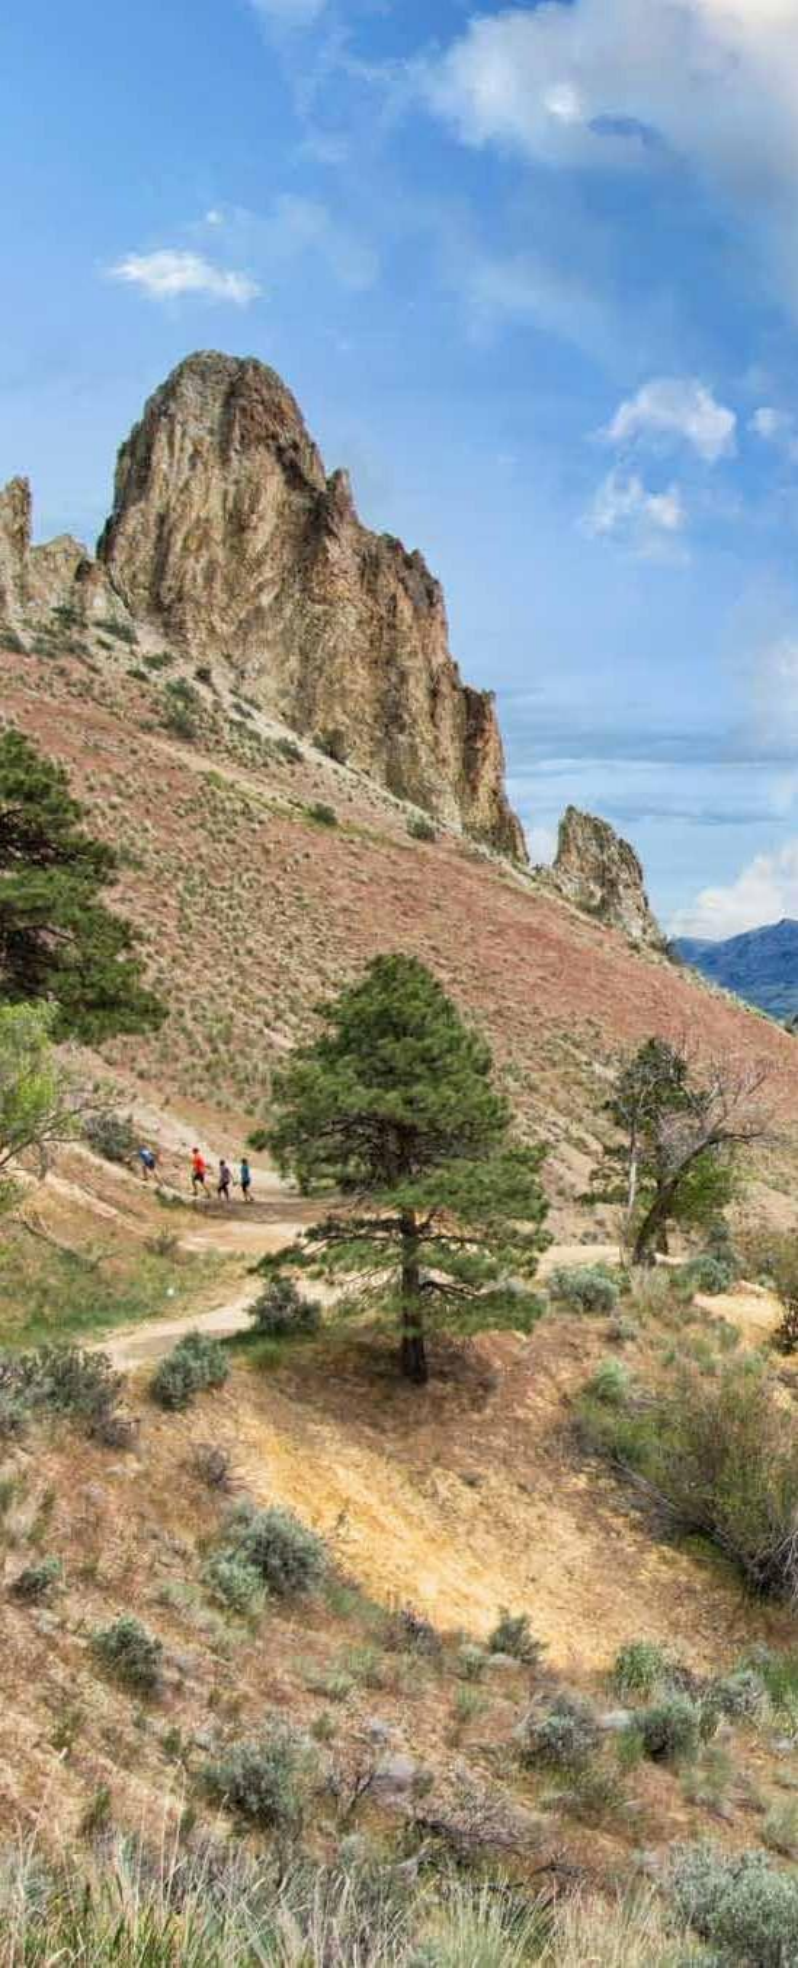
Regulatory Requirements

Growth Management Act Requirements

RCW 36.70A.140, also known as the Growth Management Act (GMA), is highly relevant to a Comprehensive Parks, Recreation, and Open Space (PROS) Plan in Washington State. This statute outlines the requirements for comprehensive planning and development regulations to manage growth in a manner that protects natural resources, promotes economic development, and enhances the quality of life for all of Chelan County's residents.

Specifically, RCW 36.70A.140 mandates that local jurisdictions, such as Chelan County, must plan for and accommodate growth through the adoption of comprehensive plans. These plans must address various elements, including land use, housing, transportation, and parks and recreation. Specifically, RCW 36.70A.140(3) outlines the requirements for a Capital Facilities Plan that consists of:

- An inventory of existing capital facilities owned by public entities, including green infrastructure, showing the locations and capacities of the capital facilities;
- a forecast of the future needs for such capital facilities;
- the proposed locations and capacities of expanded or new capital facilities
- at least a six-year plan that will finance such capital facilities within projected funding capacities and clearly identifies sources of public money for such purposes; and
- a requirement to reassess the land use element if probable funding falls short of meeting existing needs and to ensure that the land use element, capital facilities plan element, and financing plan within the capital facilities plan element are coordinated and consistent. Park and recreation facilities shall be included in the capital facilities plan element.



The Parks and Recreation element, RCW 36.70A.140(8), further describes that the plan shall include:

- Estimates of park and recreation demand for at least a ten-year period;
- an evaluation of facilities and service needs; and
- an evaluation of intergovernmental coordination opportunities to provide regional approaches for meeting park and recreational demand.

    - Estimates of park and recreation demand for at least a ten- year period;
    - an evaluation of facilities and service needs;
    - an evaluation of intergovernmental coordination opportunities to provide regional approaches for meeting park and recreational demand.

In the context of a PROS Plan, RCW 36.70A.140 provides the legal framework and mandate for municipalities to incorporate parks, recreation, and open space considerations into their comprehensive planning efforts. The PROS Plan acts as a specific component of the broader comprehensive plan, focusing specifically on the development, maintenance, and enhancement of parks, recreational facilities, and green spaces within the community.

By adhering to RCW 36.70A.140, Counties like Chelan ensure that their PROS Plans align with broader state goals for sustainable growth and development. This includes preserving natural areas, providing recreational opportunities for residents, and promoting a high quality of life. Therefore, compliance with RCW 36.70A.140 is essential for Chelan County to maintain eligibility for state funding and to guide its efforts in effectively managing its parks, recreation, and open spaces.

Washington Recreation And Conservation Office (RCO) Requirements

The Recreation and Conservation Office (RCO) is a Washington State agency dedicated to promoting outdoor recreation and conservation. They achieve this through grants and technical assistance, aiming to ensure all residents have access to well-maintained parks and protected natural spaces. But their role goes beyond funding.

The RCO recognizes the importance of well-planned park systems. These systems not only serve communities but also contribute to a network of parks and open spaces across the state. A well-implemented PROS Plan is a roadmap for a city or county's park, recreation, and open space system. It communicates to the RCO the current state of its parks and recreation facilities, budgeting, and programs, where there are gaps in its current and future levels of service, and develops an implementable vision for the community's future. This roadmap assures the RCO that grant money will be used effectively for community needs that align with statewide goals.

The RCO requires a PROS Plan, updated every six years, to comply with the Growth Management Act (GMA), with general expectations to cover the following key elements:

- **Existing Conditions & Baseline Analysis:** Establishes the groundwork by reviewing past plans, demographics, and park system trends.
- **Community & Systems Needs Assessment:** Identifies gaps and needs in park infrastructure, assesses facility conditions, and sets service level benchmarks.
- **Priorities, Strategies, and Implementation Plan:** Compiles the analyses and proposes recommendations. It prioritizes goals, outlines implementation strategies, and establishes a potential capital improvement plan for park development.

More information can be found in RCO's Manual 2: Planning Guidelines (January 2024), which can be found at: https://rco.wa.gov/recreation-and-conservation-office-grants/grant-manuals/.

RCO's Self-Certification Form (See Approvals Section) is required to be submitted with the PROS Plan demonstrating that it followed RCO's framework and ensuring alignment with the GMA. Washington communities can develop a strong vision for their parks and recreation systems and strengthen a city's grant application by demonstrating a clear vision and strategic priorities.

Chelan County Requirements

Potential improvements outlined in this plan were developed to be consistent with Chelan County's County's Comprehensive Plan and applicable codes.

Chelan County's Recreation Element Update forms the 6-year and 20-year Capital Improvement Plans (CIP) serving to inform possible near-term and long-term County budgeting, procurement, and construction needs, while providing the flexibility to adapt to unforeseen opportunities that may present themselves during this plan's performance period.

The CIP noted in this document is in no way or means the final plan to guide all park, recreation, trails, and open space development, acquisition, and maintenance needs the County will undertake over the next six years. It is an aspirational vision of potential projects, agreements, and possible programs developed thorough a public involvement process designed to capture the community's needs and wishes for its parks & recreation system. Many projects, due to funding changes, procurement challenges, staffing needs, and political priorities, may not be implemented. Yet, the projects reflected in the CIP have been developed in a way so that if the County decides to pursue a specific project, they is best positioned to secure competitive funding from other sources or are prioritized correctly.

Process

While RCO has no specific requirements for the number of pages, number of chapters, or format for comprehensive park plans, it is expected that the plan will capture the organization's needs and, more importantly, the quality of life desired by the community.

The process used to develop Chelan County's Recreation Element Update is modeled after six minimum elements noted in RCO Manual 2: Planning Policies & Guidelines. Whether this plan supports a grant application for a capital project (facility development and land acquisition) or a non-capital project (architectural, engineering, planning, etc.,) the organization of this plan and the process followed is purposefully designed to capture the elements expected by RCO.

Aside from this, the first section, the project overview, this plan is structured around six primary sections or elements needed for an effective comprehensive parks plan:

Existing Conditions (Systems Inventory)

A description of the planning or service area, including the physical setting, the community profile, other mutually supportive planning efforts, and a summary of conditions of the complete inventory of each existing outdoor recreation asset or program.

Public Involvement

A description of how the planning process gave the public ample opportunity to be involved in plan development and adoption.

Demand & Needs Analysis

An analysis that takes your inventory work and public involvement into consideration, balancing public demand with your organization's current capacity and future expectations.

Goals and Objectives

The plan must support the applicant's park and recreation mission, including the current project, with broad statements of intent, or goals that capture a community's desired outdoor recreation resources.

Capital Improvement Program

A list of the desired capital improvements or capital facility programs of at least 6 years that lists and prioritizes desired land acquisition, development, renovation, and restoration projects.

Approvals

A resolution, ordinance, or other adoption instrument showing formal approval of the plan and planning process by the governing entity.

The process diagram on the previous page identifies the priority sections needed to develop a GMA-compliant and RCO-certified comprehensive parks & recreation plan; however, many steps ran concurrently.

Inventory & Assessment

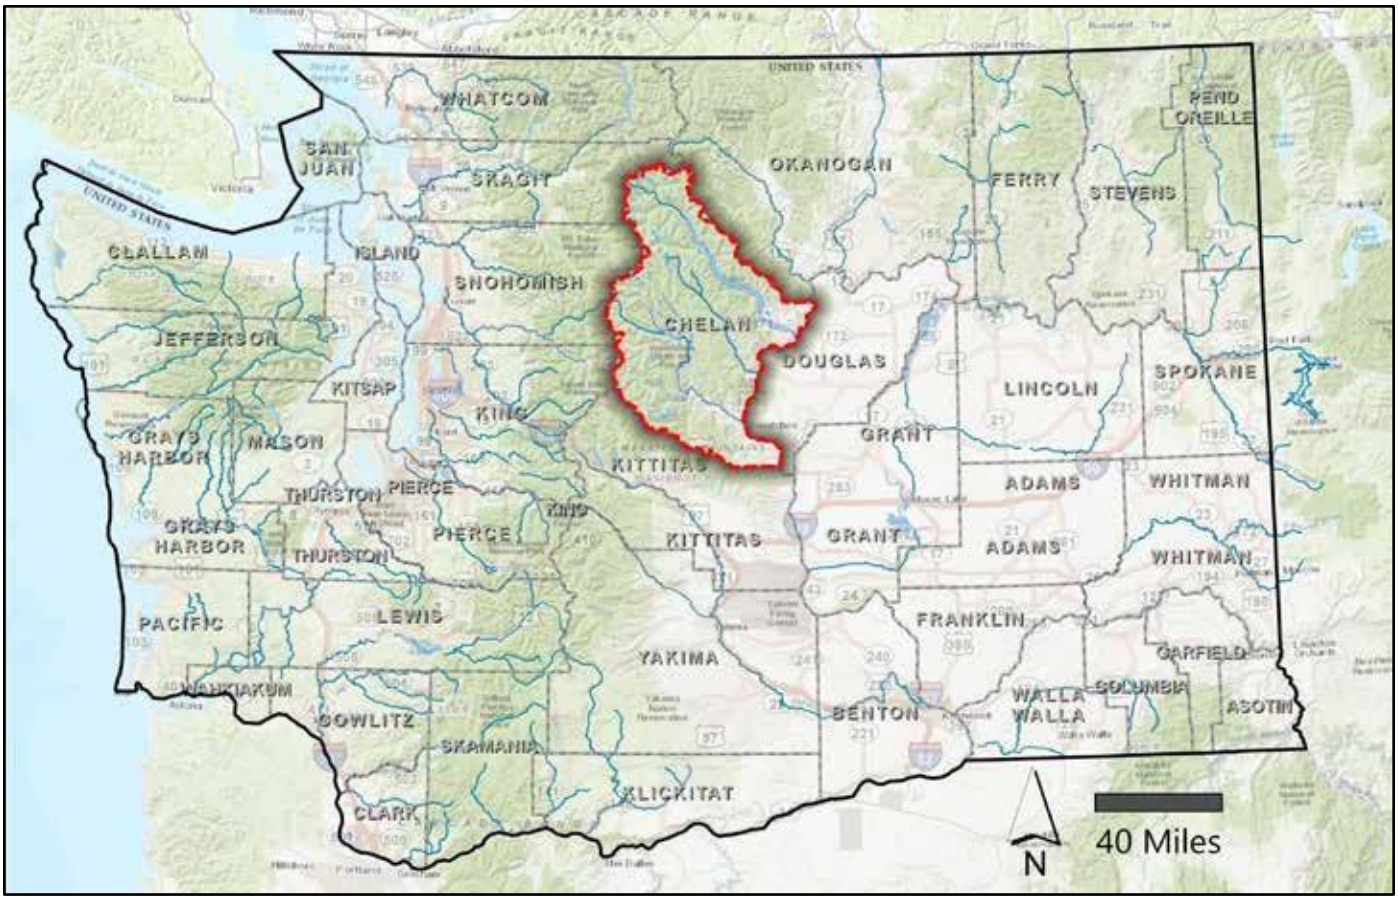
Introduction & Purpose

The purpose of this chapter is to gain a broad understanding of the current conditions of Chelan County's parks, recreation, open space and trails, the population that the parks are serving, and the regional context and planning efforts that frame the County's comprehensive system.

Currently, the County manages three named facilities and two community forests. In addition, the County is also working with the Peshastin community on the feasibility of a new passive park space along the Wenatchee River, each providing a variety of recreation amenities and experiences for the County residents to enjoy.

The inventory and assessment section is assembled across the following four distinct contexts.

Physical Context



Planning Area

Chelan County unfolds beneath the majestic backdrop of snow-covered mountains, glacier-fed waterways, and sprawling forests, where orchards seamlessly blend with sagebrush-covered hills. This unparalleled setting, renowned on a global scale, offers an abundance of recreational opportunities for both local residents and visitors from across the state, and the globe.

The county's recreational tapestry is rich and diverse, featuring activities such as hiking, skiing, camping, fishing, boating, and biking, each contributing to the vibrant character of the region. The Cascade Scenic Byway, tracing its route through the northern expanse of the Cascade Mountains and along the southern shores of Lake Chelan, serves as a gateway to these varied recreation opportunities. Utilizing US Highway 97 and US Highway 2, the primary arteries to and through Chelan County, the byway encapsulates the essence of the county's natural wonders.

Spanning over 2,920 square miles in north-central Washington State, Chelan County ranks as the third- largest county in the state in terms of land area. Geographically, the county shares its northwestern border with Skagit County, while the Cascade Mountains form its western boundaries alongside Snohomish and King Counties. To the northeast, it is bordered by Okanogan County, with the Columbia River delineating the eastern border and shared with Douglas County. The southern boundary neighbors Kittitas County.

A striking characteristic of Chelan County is the substantial portion of publicly owned land, comprising approximately 87 percent of its expanse. The lion's share (80 percent) of this public domain is seamlessly

integrated into the Wenatchee National Forest. Complementing this, an array of federal, state, and local agencies collaboratively manages the remaining public lands, forming a cohesive network that contributes to the region's natural beauty and accessibility.

History

The historical tapestry of the region, shaped by the Chelan and Wenatchi Native American tribes, became even more nuanced with recent research. As documented in contemporary studies, the integration of these tribes into the Consolidated Tribes and Bands of the Yakama Nation following the 1855 Yakama Nation Treaty reveals a complex interplay of cultural and political dynamics. Insights from archeological excavations and ethnographic research shed light on the rich heritage and intricate social structures of these indigenous communities.

Advancements in historical documentation highlight that European settlers, arriving in the 1870s and 1880s, not only navigated through switchbacks but also encountered formidable challenges in adapting to the local ecosystems. Ongoing environmental research underscores the ecological impact of early settlement patterns on the Wenatchee Valley, providing a more comprehensive understanding of the region's environmental evolution.

Incorporation in 1892 marked a pivotal moment for Wenatchee, and recent analyses delve into the socio-economic factors that influenced the decision-making process. Additionally, insights from urban development studies showcase how the first train's passage in the area catalyzed subsequent urbanization trends.

Recent interdisciplinary studies in agriculture and water resource management shed new light on the historical role of irrigation canals in Chelan County. This research underscores the enduring importance of water management practices and their implications for sustainable agriculture in the region. Moreover, a contemporary examination of public utility districts and their impact on local governance provides insights into the evolving power dynamics within Chelan County. Ongoing research in energy policy and sustainability offers a fresh perspective on the role played by the Chelan County PUD and its contributions to the region's energy landscape.

Leavenworth's economic transformation in the 1960s, documented through economic analyses and sociological studies, provides a more nuanced understanding of the community's decision to adopt a Bavarian theme. Recent

interviews with local residents and business owners offer valuable perspectives on the socio-economic factors that fueled Leavenworth's growth as a tourist destination.

Current agricultural research reveals the ongoing diversification of fruit crops in Chelan County, with a particular emphasis on the expansion of blueberries and wine grape cultivation. The flourishing wine economy, explored in contemporary studies on viticulture and tourism, showcases its pivotal role in attracting visitors to the region.

In conclusion, recent research enriches the historical narrative of the region, offering a more intricate and multidisciplinary perspective on its development, cultural heritage, and economic transformations.

Topography

Chelan County boasts a remarkable topographic tapestry, ranging from the lowlands hugging the Columbia River, just under 600 feet above sea level, to the soaring peaks that punctuate the skyline, several of which breach the 9,000-foot mark. Among these lofty summits, Bonanza Peak reigns supreme, standing proud as the county's loftiest pinnacle at an elevation of 9,511 feet. What distinguishes Bonanza Peak further is its claim to fame as the highest non-volcanic peak not just in the state of Washington but across the entire Cascade Range.

Within Chelan County, the Cascade Range unfolds into various sub-ranges, each contributing its unique character to the region's diverse topography. The Chelan Mountains, Entiat Mountains, Chiwaukum Mountains, Sawtooth Range, and the Stuart Range are among these distinctive sub-ranges, each offering its own set of scenic wonders and recreational opportunities. These ranges provide a canvas for a myriad of activities, from well-developed recreational pursuits to more primitive, backcountry adventures.

Exploration within these sub-ranges unveils a treasure trove of natural wonders. The Chelan Mountains, with their undulating terrain, invite hikers and nature enthusiasts to traverse through canyons and foothills adorned with shrub-steppe habitats. The Entiat Mountains, dominated by dry ponderosa forests, present a landscape ripe for exploration and discovery. The Chiwaukum Mountains, with their high alpine meadows, beckon adventurers to explore the elevated realms and witness breathtaking vistas.

Further afield, the Sawtooth Range showcases its rugged beauty, offering opportunities for both developed and primitive recreation. Meanwhile, the Stuart Range stands as a testament to the geological diversity of the region, providing a scenic backdrop for those seeking to immerse themselves in the untouched wilderness.

In essence, Chelan County's topography is a dynamic canvas, painted with elevations that span the spectrum from river valleys to towering peaks. The sub-ranges of the Cascade Range add layers of complexity to this natural masterpiece, creating a playground for outdoor enthusiasts and a haven for those seeking diverse and awe-inspiring landscapes.

Hydrology

Rivers and their valleys stand as defining features of Chelan County, with the Wenatchee, Entiat, and Chelan Rivers serving as significant tributaries to the Columbia River. Originating high in the Cascade Mountains, these watersheds provide essential resources for drinking water, irrigation, recreation, and diverse fish and wildlife habitats.

The Chelan River Basin revolves around the grandeur of Lake Chelan, the largest natural lake in Washington, extending over 50 miles and reaching depths of almost 1,500 feet. Notable tributaries like the Stehekin River, Railroad Creek, and Twenty-Five Mile Creek contribute to its inflow, regulated by the Lake Chelan Dam. The Entiat River, emerging below Mount Fernow's Entiat Glacier, is the smallest of the three major watersheds, gathering waters from the North Fork Entiat River and the Mad River before joining the Columbia in Entiat.

The Wenatchee River, the largest watershed in the county, drains southern Chelan County. Originating as the Little Wenatchee and White Rivers, it flows through Lake Wenatchee and converges at Wenatchee Confluence State Park before discharging into the Columbia River. Tributaries such as Chiwawa River, White River, Little Wenatchee River, Nason Creek, and Icicle Creek contribute to over 90% of the river's average flow.

In addition to Lake Chelan and Lake Wenatchee, numerous lakes, varying in size, are scattered across Chelan County, supporting a range of recreational activities. The majority of these lakes are nestled within federally designated wilderness areas, contributing to the region's allure and diverse offerings

Habitat

Chelan County boasts an array of habitat types, characteristic of regions east of the Cascade Mountains, exhibiting remarkable diversity. Wetlands trace the Columbia River and Lake Chelan shorelines, while the shrub-steppe habitat thrives in the county's canyons and foothills. Ponderosa forests, dry and flourishing, coexist with meadows nestled in the high alpine zones. The area teems with an assortment of wildlife, including mule

deer, elk, black bears, coyotes, cougars, and a myriad of small mammals and birds. The native tree population comprises western red cedar, Douglas and grand firs, ponderosa and white pines, big leaf, Douglas, and vine maples, along with dogwoods, alders, and cottonwoods. Beneath or beyond the tree canopy, the landscape features grasses, sagebrush, and shrubs.

Climate

The region's climate exhibits a fascinating blend, bridging characteristics of the milder, moister Puget Sound and the drier climate of central Washington. Temperature fluctuations from hot summers to cold winters are more pronounced, varying with elevation and proximity to the Cascade Crest. Precipitation generally decreases inland, but Lake Chelan plays a crucial role in moderating temperatures, contributing to the area's success as a thriving growing region.

Demographic Context

In order to make planning recommendations that will work for Chelan County, it is important to understand who lives in Chelan County, with details including population, demographics, income, housing, education, employment, and transportation.

Each of these categories and sets of data shares something new about Chelan County and its use of the parks and recreation system. With each data point, it is important to consider how parks, trails, and open spaces can better serve both the sets of people who show as the majority in a data set and those who are a minority. It is clearly a necessity to make sure that the parks system works well for those in the majority and who already frequent these spaces. It is also sometimes most critical to see who the minority is and to think about how to make the parks system more accessible so that Chelan County can increase its park use and ensure the system is working for all community members.

Key Takeaways

- Chelan County's population was estimated to be 81,500 in 2023 and **the population projection for Chelan County in 2050 is roughly 97,195.** This means that Chelan County will need to accommodate roughly **15,695 new residents by 2050** – a 19.3% increase from 2023. This includes implementing a parks plan to accommodate the level of service desired by the community.
- **The median age in Chelan County is 39.9,** which is higher than that of Washington State (37.9). 29.8% of households have at least one person under 18, and 36.9% of households have at least one person 65 or older. It is important that the parks plan takes these two populations into account.
- **About 72.2% of Chelan County residents are white alone, 28.0% identify as Hispanic or Latino,** 1.0% are Asian alone, 0.3% are Black or African American, 0.5% are American Indian or Alaska native, 0.1% are Native Hawaiian/Pacific Islander, 0.5% are some other race, and 3.7% are two or more races. 27.8% of the Chelan County population is an ethnicity that isn't white alone. 26.0% speak a language other than English. Programming and recreational opportunities for Chelan County should serve the uniqueness of this community.
- **Of the total population, 17.5% of the population have at least one disability.** 6.7% have difficulty with walking, 5.7% have cognitive difficulty, 6.7% have difficulty with hearing and 6.9% have difficulty with vision. These disability categories should be taken into consideration when planning public spaces.
- **19.9% of residents are living at or below 149% of the poverty level,** indicating that they likely have limited disposable income available for recreational activities.
- 68.7% of all housing units in Chelan County are single-family units, and 12.3% are mobile home units. Considering population density within Chelan County would only benefit the parks plan.
- **5.0% of residents have no vehicle available,** and for parks to be accessible to all residents, walkability is a crucial factor.
- **70.5% of Chelan County residents travel less than 25 miles to work.** Chelan County PROS Plan considerations should accommodate those who both live and work within the county, and it may be useful to use employment locations and concentrations to better serve the workforce with parks near local businesses.
- **Chelan County has a median household income of s64,895, which is much less than Washington statewide median household incomes (s82,400). However, incomes are not consistent throughout the County.** In particular, Wenatchee includes some of the lowest-income census tracts, and the areas surrounding Wenatchee have some of the highest-income census tracts. Considerations should be made within PROS recreation and programming to accommodate and serve the needs and demands of all communities in Chelan County and thereby developing an equitable distribution of parks systems.

Population

Historic Trends

Chelan County has experienced a largely stable population over the past 30 years, with a significant estimated population increase from 1990 to 2000. Chelan County's population appears to be increasing at a similar rate to overall trends in Washington State. The table below shows a steady increase in Chelan County's population from 2010 to 2023.

Table 2-1: Historic Population (US Census)				
Census Population	Chelan County		WA State	
	Count	Growth Rate	Count	Growth Rate
1990	52,250	--	4,866,692	--
2000	66,616	27.49%	5,894,121	21.11%
2010	72,453	8.76%	6,724,540	14.08%
2020	79,141	9.23%	7,705,281	14.58%

Source: OFM Decennial Census Counts of Population for the State, Counties, Cities and Towns 1990-2020.

Population Forecast

The population projections for Chelan County are based on the Washington State Office of Financial Management's (OFM) countywide population projections. OFM publishes low, medium, and high population projections for all counties in Washington every five years, and the most recent projections were released in 2022. This plan will utilize the new OFM projections to project a population for Chelan County through the year 2050.

This process utilizes the OFM medium-level projection as the forecasted population. The OFM medium-level projection for Chelan County for 2050 is 97,195.

This means that Chelan County will need to accommodate roughly 15,695 new residents by 2050 – a 19.3% increase from 2023. Figure 2.1 at the top of the following page shows the estimated historical population from 1990 to 2023 and the population projection growth until 2050.

Table 2-2: Chelan County Population by Year		
Year	Chelan County	
	Population	Growth Rate
2010	72,453	--
2011	71,787	-0.92%
2012	73,687	2.65%
2013	73,967	0.38%
2014	74,588	0.84%
2015	75,463	1.17%
2016	76,338	1.16%
2017	76,533	0.26%
2018	77,036	0.66%
2019	77,200	0.21%
2020	79,141	2.51%
2021	80,000	1.09%
2022	80,650	0.81%
2023	81,500	1.05%

Source: ACS 5-Year Estimates Data Profiles, DP05 and OFM Population Projections for years 2020-2023.

Table 2-4: Chelan County Population by Year			
Age	**Chelan County Estimate**	**Chelan County %**	**WA State %**
Under 5 years	4,625	5.9%	5.9%
5 to 9 years	5,512	7.0%	6.2%
10 to 14 years	5,166	6.6%	6.3%
15 to 19 years	4,887	6.2%	6.0%
20 to 24 years	4,622	5.9%	6.3%
25 to 34 years	9,665	12.3%	15.1%
35 to 44 years	9,379	11.9%	13.7%
45 to 54 years	8,773	11.2%	12.3%
55 to 59 years	5,319	6.8%	6.3%
60 to 64 years	5,633	7.2%	6.4%
65 to 74 years	8,873	11.3%	9.6%
74 to 84 years	3,968	5.1%	4.1%
85 years and over	2,086	2.7%	1.7%

Population Demographics

Age & Gender

Chelan County has a slightly higher percentage of male residents than female residents. The 2021 American Community Survey (ACS) 5-year estimates indicate the age categories with the highest populations in Chelan County are 25 to 34 years (12.3%), 35 to 44 years (11.9%), and 65 to 74 years (11.3%). The median age in Chelan County is 39.9, which is higher than that of Washington State (37.9). Approximately 2.5% of the population is under 18, and 19.0% of the population is age 65 or older. According to census data (specifically DP1), 29.8% of households have at least one person under 18, and 36.9% of households have at least one person 65 or older. It is important that the parks plan takes these two populations into account.

Race & Ethnicity

About 72.2% of Chelan County residents are white alone, 28.0% identify as Hispanic or Latino, 1.0% are Asian alone, 0.3% are Black or African American, 0.5% are American Indian or Alaska native, 0.1% are Native Hawaiian/Pacific Islander, 0.5% are some other race, and 3.7% are two or more races. 27.8% of the Chelan County population is an ethnicity that isn't white alone. Figure 2.2 on the following page shows the race and ethnicity percentages of Chelan County vs Washington State as a whole.

While understanding racial and ethnic demographics can help identify the need for incorporating languages other than English into parks planning, operations, and programming, it is even more critical to examine English proficiency and languages spoken at home, as Census data does not indicate cultural identities of populations. Increasing efforts to engage with residents in the languages represented by community members could help make planning efforts and parks more accessible to all.

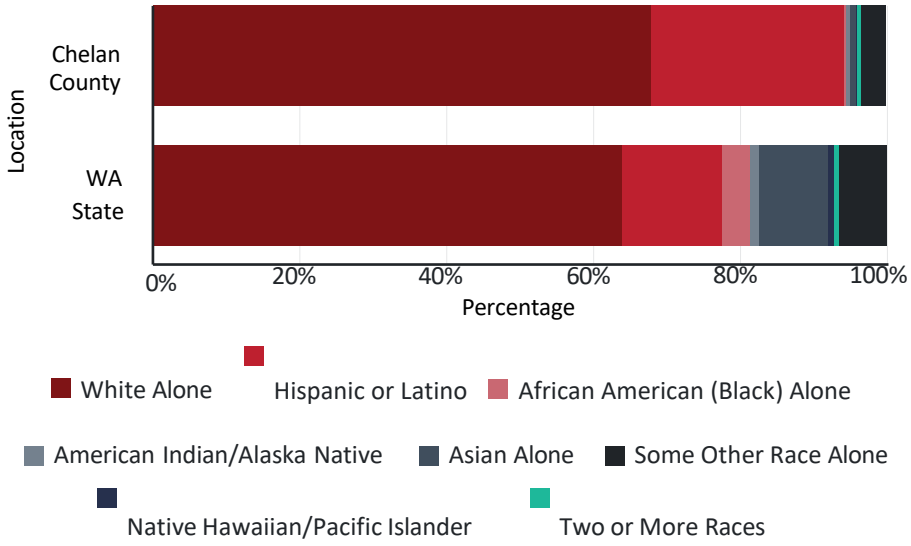

Figure 2.2: Race and Ethnicity Percentages of Chelan County versus WA State

Source: 2020 Decennial Census, DP1

Of Chelan County residents over the age of 5 who were included in the ACS data, 26.0% speak a language other than English. (2021: ACS 5-Year Estimates, S1601). 24.0% speak Spanish at home. Of the roughly 19,182 residents who speak a language other than English, 39.3%, or 7,530 indicated that they speak English "less than very well." 24.0% of residents speak Spanish at home, 1.3 % speak another Indo-European language, and 0.6% speak an Asian or Pacific Islander language (2021 ACS S1601). It is also worth noting that Census data and estimates often have an undercount of non-English speakers, as undocumented residents with the community do not feel safe filling out the surveys.

Table 2-5: Ethnicity in Chelan County

Ethnicity	Chelan Count Estimate	Chelan County %	WA State %
Hispanic or Latino (Any Race)	22,104	28.0%	13.7%
Not Hispanic or Latino	56,970	72.0%	86.3%

Source: 2021 ACS 5-Year Estimates, DP05

Disability

Disability metrics for Chelan County are important to understand, as they help in identifying the accessibility needs of the population and incorporating amenities within the parks system for greater access. This information also helps to determine how many people are likely to travel to parks and open spaces. According to the U.S. Census, 17.5% of the population have at least one disability. This is a higher percentage of the population that lives with a disability than Washington (12.7%). In further developing a parks plan for Chelan County, it is important to consider amenities and accommodations which would serve the portion of the population who live with disabilities.

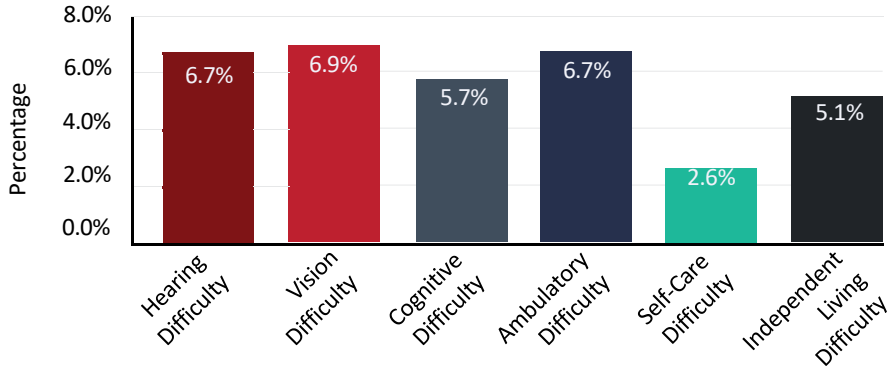

Figure 2.3: Percentage of Chelan County's Population Living with Disability

Source: 2021 ACS 5-Year Estimates, S1810.

Figure 2.3 shows the percentage of residents within Chelan County living with a disability according to the U.S. Census. Of the total population, 6.7% have difficulty with walking, 5.7% have cognitive difficulty, 6.7% have difficulty with hearing and 6.9% have difficulty with vision. These disability categories should be taken into consideration when planning public spaces. Additionally, 5.1% need assistance with independent living, and 2.6% need assistance with self-care. Disability impacts most people at some point in their lives, so the more accessible communities are, the more they will be able to benefit the whole population.

Income

The median household income in Chelan County per 2021 ACS estimates was approximately $64,895 compared with Washington State at $82,400. Overall, Chelan County income brackets are consistent with statewide households. 38.1% of Chelan County households make less than $50,000 a year. Table 2-6 below shows the distribution of household incomes for Chelan County and Washington State. Figure 2.4 below shows a graph of the income distributions. The median property value in Chelan County is $492,700.

In 2021, the census tracts with the highest Median Household Income in Chelan County, WA was Census Tract 9607 (north of Wenatchee) with a median income of $108,750, followed by Census Tract 9605.02 (near Monitor, South of Monitor and West of Wenatchee) with a median income of $94,421 and Census Tract 9612 (south of Wenatchee), with a median income of $93,464. The tracts with the lowest median household incomes are Tract 9610.02 (Wenatchee) at $36,003, Tract 9608.03 (Wenatchee) at $37,940, and Tract 9611.01 (Wenatchee) at $44,792.

The map on the following page shows all of the tracts in Chelan County, WA colored by their Median Household Income. As seen from the visualization, the areas surrounding Wenatchee have concentrations of census tracts with higher average incomes, and Wenatchee proper has a concentration of census tracts with lower median incomes. Considerations should be made within Chelan County PROS recreation and programming to accommodate and serve the needs and demands of all communities in Chelan County and thereby developing an equitable distribution of parks & recreation elements.

Table 2-6: Household Income in Chelan County

Household Income	Chelan County Households	WA State Households
Less than $10,000	3.0%	4.2%
$10,000 to $14,999	3.2%	2.9%
$15,000 to $24,999	9.4%	5.9%
$25,000 to $34,999	9.8%	6.4%
$35,000 to $49,999	12.7%	10.1%
$50,000 to $74,999	18.4%	16.3%
$75,000 to $99,999	12.7%	13.4%
$100,000 to $149,999	15.7%	18.7%
$150,000 to $199,999	8.0%	9.8%
$200,000 or more	7.1%	12.4%
Total Households:	**29,474**	**2,931,841**
Median Income (Dollars):	**s64,895**	**s82,400**

Source: 2021 ACS 5-Year Estimates, DP05

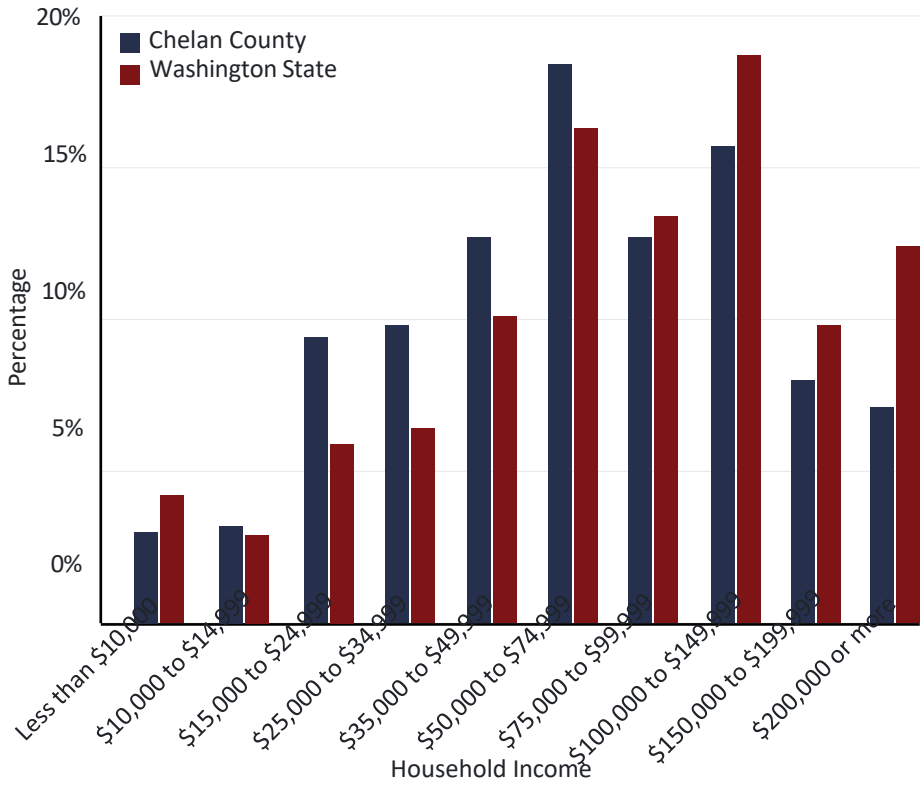

Figure 2.4: Chelan County and WA State Household Income

Source: 2021 ACS 5-Year Estimates, S1810.

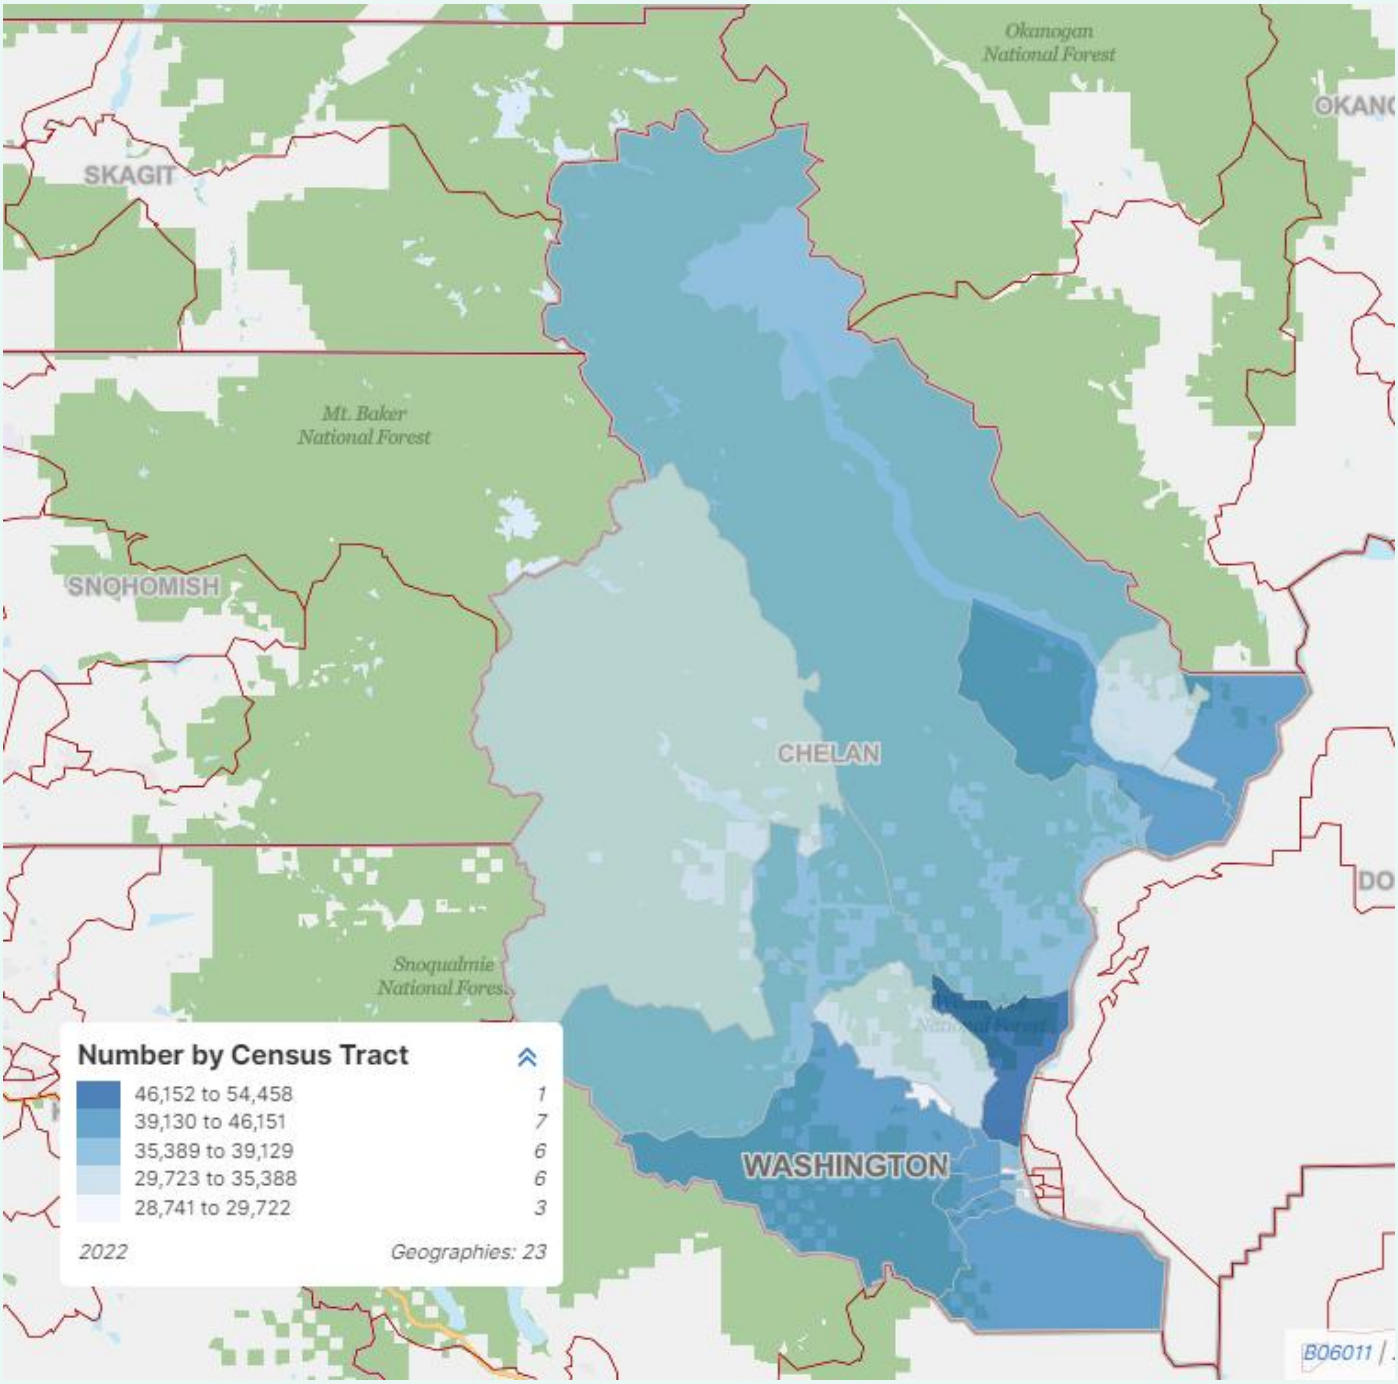

Figure 2.5: Chelan County Census Tracts and Median Incomes

Source: S1901, ACS 2022, 5-Year Estimates

Table 2-7 identifies the number of residents over the age of one and their poverty status in 2021. For reference, according to the 2021 Federal Poverty Guidelines, being below the poverty level for a one-person household would earn less than $12,880 or for a four-person household it would be $26,500, with other amounts for other household sizes. 150% of the poverty level for a one-person household is $19,320 or $39,750 for a four-person household. This paints a picture of finances for all residents in Chelan County – with a reminder that this includes both adults and children. It is important to note that 19.9% of residents are living at or below 149% of the poverty level, indicating that they likely have limited disposable income available for recreational activities.

Table 2-7: Poverty Status in Chelan County Population	
Poverty Status	**%**
# of People for Whom Poverty Status is Determined (Age 1 and over)	77,001
Below 100% of the poverty level	10.7%
100-149% of the poverty level	9.2%
At or above 150% of the poverty level	80.1%

Housing

Housing Type

Table 2-8 presents the distribution of various housing unit types in Chelan County, along with their corresponding percentages relative to the total housing within Chelan County and the state of Washington. 68.7% of all housing units in Chelan County are single-family units, which is higher than Washington (67.1%). Chelan County also has a lower percentage of structure with 20 or more units (4.7%) than Washington (11.7%), and it has a higher percentage of mobile homes (12.3%) than the state as a whole (5.9%). Otherwise, the distribution of housing types are generally consistent with Washington state percentages.

Table 2-8: Poverty Status in Chelan County Population			
Housing Type	**Chelan County # of Units**	**Chelan County %**	**WA State %**
1, detatched	25,482	65.8%	63.0%

Total:	**38,744**	**38,744**	**3,170,695**

Source: 2021 ACS 5-Year Estimates, DP04.

Housing Tenure

Excluding vacancy rates, 64.7% of occupied units In Chelan County are owner-occupied and 35.3% of units are renter-occupied. The percentage of owner- occupied housing is consistent with Washington state (63.6%) percentages. This is consistent with Chelan County's housing values and incomes. Figure 2.6, right, shows owner vs. renter rates in Chelan County Washington.

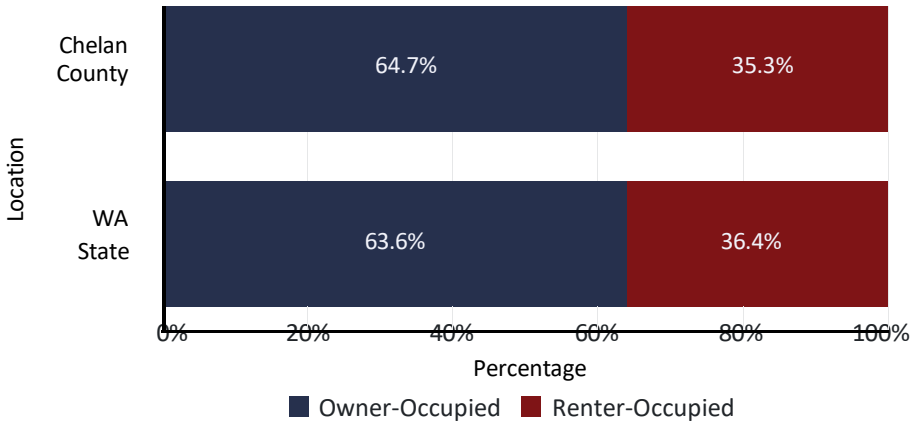

Figure 2.6: Owner vs. Renter in Chelan County and WA State

Source: 2021 ACS 5-Year Estimates, DP04.

Average Household Type

The average household size in Chelan County is 2.62 people, which is a slightly higher average household size than Washington State at-large (2.55 people). Table 2-9 provides a breakdown of the average number of households per type of household. This information is useful when considering what housing types might be best suited for people in Chelan County with differing life circumstances. While a single-family home might be most suitable for certain family households, multi-family homes might create a greater sense of community for households with one parent present, and smaller units may be better suited for nonfamily households. This table shows that Chelan County has a slightly lower percentage of married households (49.7%) than statewide percentages (50.1%).

Employment & Transportation

Employment

The civilian employed population 16 years and over in Chelan County is estimated to be 36,584, according to 2021 American Community Survey 5-year estimates (DP03). The largest industry employment sectors in Chelan County are educational services, health care and social assistance (22.7%) and retail trade (12.0%). Chelan County's public administration sector employs a higher percentage of the population than that of Washington, but is otherwise generally consistent with statewide percentages.

Table 2-9: Average Household Type in Chelan County

Household Type	Chelan County # Households	Chelan County %	WA State %
Married-couple family household	14,637	49.7%	50.1%
Male householder, no spouse present, family household	5,219	17.7%	18.1%
Female householder, no spouse present, family household	7,307	24.8%	23.6%
Cohabiting couple households	2,311	7.8%	8.2%
Total:	**29,474**	**29,474**	**2,931,841**

Source: 2021 ACS 5-Year Estimates, DP04.

Employment Inflow/ Outflow

Figure 2.7 shows the US Census OnTheMap estimates for inflow and outflow of daily jobs in Chelan County. This identifies that a greater number of people travel into Chelan County for employment (18,494) than travel out of the county (17,057). 20,882 people remain in Chelan County to live and work. It is important to note that employment has changed for many people since the 2020 Census, with many more people working from home. These numbers continue to change each year following the pandemic.

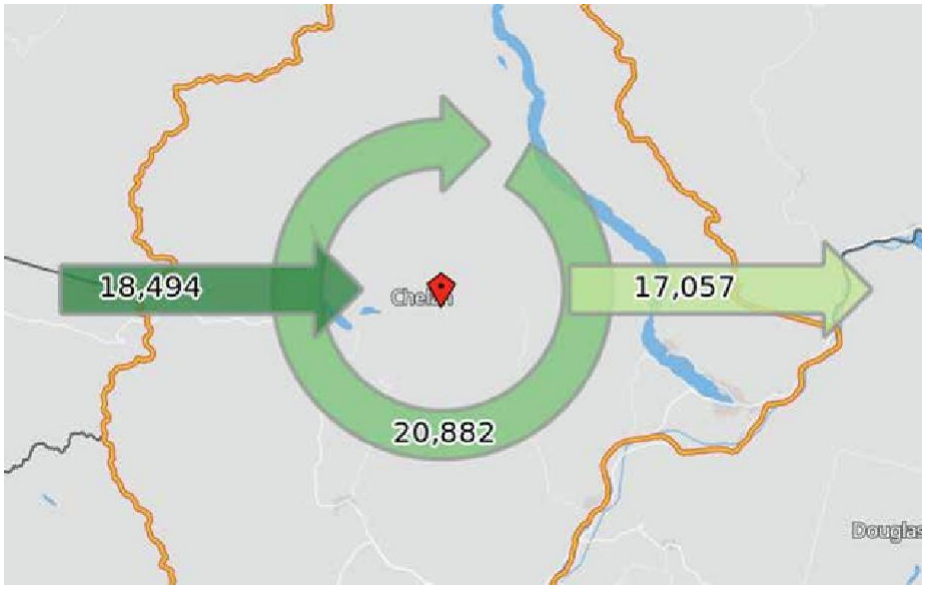

Figure 2.7: Inflow/Outflow of Employment in Chelan County

Source: OnTheMap, 2021 Census Estimates.

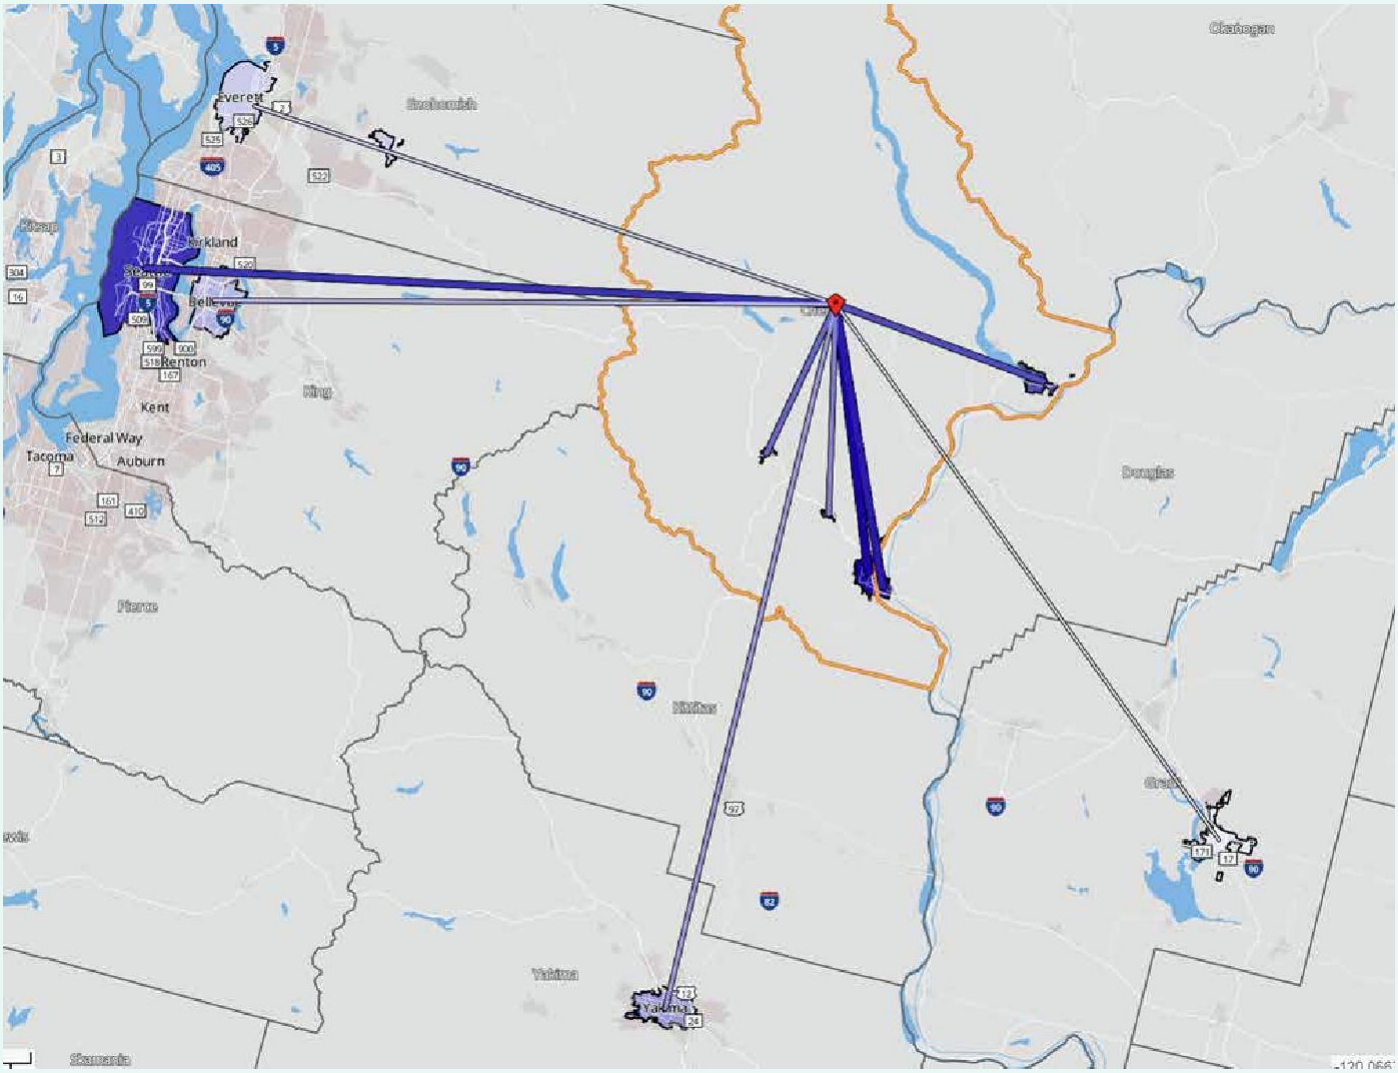

Figure 2.8: Employment Locations of Chelan County Residents

Source: OnTheMap, 2021 Census Estimates.

Table 2-10: Chelan County Distance Traveled to Work

Distance	Chelan County %	WA State %
Less than 10 miles	58.2%	49.4%
10 to 24 miles	12.3%	27.0%
25 to 50 miles	7.0%	10.4%
Greater than 50 miles	22.5%	13.2%

Source: OnTheMap, 2021 Census Estimates.

Employment Locations

Figure 2.8 above shows a map of the top 10 employment locations of Chelan County residents in 2021, emanating from Chelan County. According to the OnTheMap visualization, there are concentrations of employment in Wenatchee, East Wenatchee, Seattle, Chelan, and Leavenworth, with lower concentrations in other cities (Cashmere, Yakima, Bellevue, Everett, Moses Lake, etc.).

2-10, left, shows the distances residents travel to work and the percentage of the populations in Chelan County and Washington. 49.9% of Chelan County residents travel less than 10 miles for work, which is a slightly higher percentage compared to statewide percentages (49.4%). About 61.4% of Chelan County residents travel less than 25 miles to work, and 32.4% work greater than 50 miles away from home.

Means of Transportation to Work

Table 11 below shows the means of transportation for the populations of Chelan County and Washington. 84.9% of Chelan County residents travel by car/truck/van to work, which is a higher percentage compared to statewide (76.9%). 1.0% of Chelan County residents take public transportation to work, and 7.3% of residents work from home according to 2021 estimates.

Table 2-11: Chelan County Means of Transportation to Work

Distance	Chelan County %	WA State %
Car, truck, or van	84.9%	76.9%
Public transportation (excluding taxicab)	1.0%	5.2%
Walked	3.8%	3.3%
Bicycle	0.6%	0.7%
Taxicab, motorcycle, or other means	2.3%	1.2%
Worked from home	7.3%	12.6%

Source: American Community Survey 2021 5-year estimates, Table S0801.

Access to Vehicles

Figure 9 below shows the access Chelan County residents have to vehicles. 34.6% of people in Chelan County have access to 2 vehicles, and 30.5% have access to 3 or more vehicles at any time. It is important to note that 5.0% of residents have no vehicle available, and for parks to be accessible to all residents, walkability is a crucial factor.

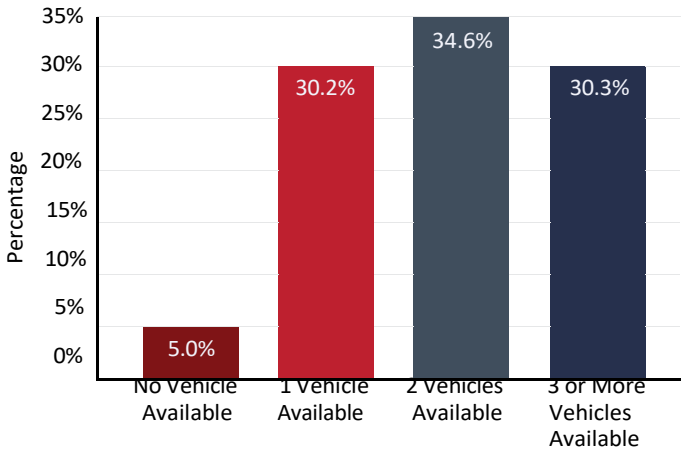

Figure 2.9: Percentage of Chelan County Vehicle Availability

Source: 2021 ACS 5-Year Estimates, S2504.

Physical Inventory & Assessment

The many recreation opportunities within Chelan County include boating and water sports, rafting, kayaking, fishing, mountain biking, backpacking, mountaineering, rock climbing, golf, hiking, hunting, camping, motorized trail sports, horseback riding, sightseeing, bird watching, snowboarding, cross-country skiing, downhill skiing, and fossil, rock and mushroom collecting. Many regional facilities are inventoried within the incorporated city comprehensive plans and are not listed in detail here. See the attached Motorized Trails Plan for a detailed inventory of motorized recreation opportunities.

Some parts of the County have few opportunities for traditional community sports activities such as baseball and soccer. Facilities for these types of activities tend to be located in more urbanized locations.

The County operates the Expo Center, manages the Ohme Garden State Park and owns the Wenatchee River County Park, located in the Monitor area. That park includes
17 developed acres adjacent to the Wenatchee River, and includes full service camp-sites for recreational vehicles and a State of Washington temporary farm worker camp and is managed through a contract.

Chelan County PUD has developed 14 parks to provide recreational opportunities along the Columbia River and Lake Chelan as required as part of dam licensing. Five of those parks are in Douglas County (Rock Island, Lincoln Park, Orondo, Daroga, Beebe Bridge).

Table 2-12: List of Parks within Chelan County Lines			
Management	**Name**	**Acres**	**Amenities**
Chelan County Parks			
Chelan County	Wenatchee River County Park	17	• Adjacent to the Wenatchee River with 43 full-service camp sites for RVs.
Chelan County	Chelan County Expo Center	33	• 140RV hook-ups with sewer, horse barn with 42 inside stalls and 40 outside stalls, grandstand with 1,200 seating, arena, buildings (24,000 sq ft for Pavilion with full commercial kitchen, auditorium with 6,500 sq ft) multiple smaller buildings.
Chelan County	Ohme Gardens	40	• Botanic garden with lawns, seven pools, four waterfalls and one mile of natural stone paths. Also used as a rentable special events center.
Chelan County PUD			
Entiat Park and Recreation Department	Entiat Park	40	• Camping (26 tent sites and 31 RV sites with complete hookups), 2-lane boat launch , boat trailer parking, swimming, restrooms, showers, RV dump station, playground equipment, 2 picnic shelters, picnic areas.
WA State Parks and Recreation Commission	Wenatchee Confluence State Park	197	• Camping (59 tent/RV sites: 51 with electricity, water and sewer, 8 standard), baseball/soccer field, 2-lane boat launch, boat trailer parking, swimming, restrooms, showers, picnic shelter, volleyball, tennis, playground equipment, Wenatchee River pedestrian bridge, 4.5 miles of trail, wildlife area, interpretive graphics, RV dump station.
PUD	Chelan Falls Park	33	• Two-lane boat launch, short-term boat moorage, parking, day-use facilities, picnic shelters, restrooms, showers, shoreline trail, tennis court, playground equipment, sports fields, horseshoe pits, swimming area.
PUD	Chelan Falls Powerhouse Park	20	• Boat ramp, boat dock, day-use facilities, picnic shelter, restrooms, playground equipment, swimming area.
PUD	Chelan Riverwalk Park	12	• One-mile scenic river loop trail, boat launch, short-term moorage, boat trailer parking, grass playfield, restrooms, picnic areas, picnic shelter.
PUD	Entiat Park	40	• Campsites, picnic shelters, restrooms, boat launch, interpretive trail.
PUD	Rocky Reach Dam Park	38	• Extensive, award-winning landscaping, picnic areas, picnic shelter, playground equipment, horseshoe pits, Visitor Center, fish viewing room, historical galleries, restrooms.
PUD	Walla Walla Point Park	70	• Fourplex soccer/softball complex, swimming, 1.2 miles of trail, tennis, volleyball, horseshoe pits, playground equipment, restrooms, picnic shelters, special event area, ADA fishing pier platform.
PUD	Wenatchee Riverfront Park	31	• 1.1 miles of shoreline trail, "special event" mini-railroad, ice rink, 2-lane boat launch, short-term moorage, boat trailer parking, restrooms.
Local Parks			
Chelan	Chelan Ball Field Complex (aka 'Stinky Fields')	12	• (2) Hardball/Softball Fields, (1) Softball Field with 2 batting cages, horseshoe pits, food concession, restroom, and a playground.
Chelan	Ruth Pingrey Centennial Park	0.5	• Overlook with benches and lawn area.
Chelan	Don Morse Memorial Park	40	• 18-hole natural green grass putting course, toy rentals, snack bar, volleyball courts, skate park, tennis and basketball courts, playground and picnic shelters with electric, water, and BBQ areas.
Chelan	Lakeshore Marina/RV	5	• 100 slip with or without power, pump out station, launch, 163 full hook up sites for RV's (water, electric, sewer & cable), including 22 sites with 16 x16 tent pads, picnic tables, dump station and ADA accessible restrooms and showers.

Table 2-12: List of Parks within Chelan County Lines			
Management	**Name**	**Acres**	**Amenities**
Chelan	Lakeside Park	10	• 17,500 sq. ft. of beach front swim area, seasonal boat launch, volleyball & basketball courts, play equipment, picnic tables and ADA accessible restrooms and 2 hour transient boat tie up.
Cashmere	Ardeta	0.06	• Small park in the city center where the Christmas tree is located.
Cashmere	Cottage Avenue Park	0.67	• Climbing structure, swings, and picnic tables.
Cashmere	Natatorium Park	N/A	• Outdoor heated swimming pool.
Cashmere	Railroad Park	0.02	• Picnic tables, trees, grass.
Cashmere	Cashmere Riverside Park	13.8	• Two restroom buildings, skate park, bmx pump track, horseshoe pits, children's play area, multiple use soccer/ softball fields, access ramp for rafters, parking, and picnic area. A paved walking trail runs the full length of the park and along the dike from Aplets Way to N. Douglas Street.
Cashmere	River Street Park	0.49	• Small neighborhood park where the old City Hall was located.
Cashmere	Simpson Park	4.27	• Small playground, and picnic tables, softball field.
Dryden	Dryden School Memorial Park	N/A	• --
Entiat	Columbia Breaks Fire Interpretive Center	17.5	• Amphitheater, Forest Service lookouts, and ½ mile trail.
Entiat	Kiwanis Park	4.5	• Kiwanis 2 baseball/softball fields.
Entiat	Rainbow Gardens	0.5	• Beautification area.
Wenatchee River Institute	Barn Beach Reserve	5.36	• Natural area, Upper Valley Museum, trails, interpretive signs, Wenatchee River Institute and Red Barn educational buildings.
Leavenworth	Blackbird Island	14.12	• Trails, interpretive signs, groomed ski trail.
Leavenworth	Enchantment Park	39.46	• Two softball fields, a junior baseball field (one field doubles as a youth soccer field), playground, BBQ, trails with interpretive signs, boat put-in, groomed ski trails, skate park. Restrooms and changing rooms are adjacent to the fields, along with parking that accommodates a large number of vehicles and up to 3 busses, including ADA parking.
Leavenworth	Front Street Park	1.75	• Lawns, shade trees, restrooms, gazebo, interpretive kiosk, and alpine gardens downtown.
Leavenworth	Fish Hatchery	N/A	• Visitor's center, interpretive signs, picnic area, trails, and tours of fish hatchery infrastructure, as well as groomed cross-country ski trails in winter managed by the Leavenworth Winter Sports Club.
Leavenworth	Frankie's Wayside	0.5	• Benches, shade trees, water fountain.
Leavenworth	Leavenworth Golf Course	102.5	• 18-hole public golf course, groomed ski trails.
Leavenworth	Lions Club Park	1.76	• Picnic tables, picnic shelter, adjoining City Hall and City pool.
Leavenworth	Pump Track	N/A	• Public bathrooms, asphalt pump track located in Enchantment Park.
Leavenworth	Leavenworth Ski Hill	N/A	• 2 rope tows and tube hill, lodge with public bathrooms, and groomed cross- county ski trails managed by Leavenworth Winter Sports Club, as well as a new mountain bike trail system built by Evergreen Mountain Bike Alliance.
Leavenworth	Trout Unlimited Park (City Boat Launch)	1.6	• Boat launch, parking, trails.
Manson Park and Rec District	Manson Bay Park/Marina	6	• Lake overview, swimming, picnic area, restrooms, 3 boat docks, 32-slip marina, winter-only boat launch, boat sanitary pump-out facility.

Table 2-12: List of Parks within Chelan County Lines			
Management	**Name**	**Acres**	**Amenities**
Manson Park and Rec District	Old Mill Park	20	• 4-lane boat launch, short-term moorage, picnic area, restrooms, marine dump station, boat trailer parking.
Manson Park and Rec District	Old Swim Hole	N/A	• Grassy area, designated swim area.
Manson Park and Rec District	Singleton Park	10	• Softball and baseball fields, restrooms, gazebo, soccer field, basketball courts and universally accessible paths and parking, and playground improvements are planned for the near future.
Manson Park and Rec District	Wapato Lake	6	• The site has a forty-site campground for tent camping and small RVs, 2 boat docks, a gazebo, restroom facilities and a boat ramp that has previously been maintained by the State Department of Wildlife.
Manson Park and Rec District	Willow Point Park	1.85	• Designated swim area, playground, 3 barbecues and 5 picnic tables.
Peshastin	Kiwanis Park	N/A	• --
Wenatchee	Centennial Park	0.4	• Picnic area, bandshell, restrooms.
Wenatchee	Chase Park	0.5	• Picnic area & playground.
Wenatchee	Hale Park	4.97	• Dog off-leash recreation area, parking, picnic area. Restrooms, skate park, play area and picnic shelter area slated for 2018.
Wenatchee	Lincoln Park	18.8	• Ball fields, bandshell, restrooms, picnic shelter, & Rotary playground.
Wenatchee	Morris Park	N/A	• Located on Cherry Street in Wenatchee, Morris Little League Park features four fully-functional baseball diamonds complete with scoreboards, outfield fences, dugouts, grandstands and a concession stand.
Wenatchee	Okanogan Street Property	0.29	• Undeveloped park space.
Wenatchee	Pennsylvania Park	1	• Play equipment, wading pool, ball field, restrooms.
Wenatchee	Pioneer Park	7.7	• City pool, restrooms, picnic area, play equipment and skateboard park.
Wenatchee	Rainbow Park	2	• Gateway into the City of Wenatchee.
Wenatchee	Rotary Park	8	• Group and individual picnic shelters, restrooms, basketball court, disk golf course, horseshoe pits, splash pad, flag plaza, parking, restrooms, paved loop trail.
Wenatchee	Saddle Rock Gateway	4.83	• Parking, electric vehicle charging station, restrooms, picnic shelter, amphitheater, interpretive areas, bike racks, and drinking fountain.
Wenatchee	Skyline Drive Overlook	0.3	• Parking area with views of the Wenatchee Valley.
Wenatchee	Washington Park	4.1	• Picnic shelter, restrooms, wading pool, play equipment.
Wenatchee School District	Wenatchi Park	8.1	• Soccer, baseball & softball fields, open space.
Chelan-Douglas Land Trust, Chelan PUD, City of Wenatchee, and private landowners	Wenatchee Foothills Trails	1,928	• Natural space with pristine shrub/steppe habitat and many miles of non-motorized trails in the Sage Hills Trails, Horse Lake Reserve, Castle Rock Natural Area, Saddle Rock Trails, Jacobson Preserve, Foothills North, and Dry Gulch areas. Several parking areas have restrooms, picnic areas, and interpretive signs. These areas provide superb, easily accessible outdoor recreation opportunities in the Wenatchee Valley.
Wenatchee	Wenatchee Ice Arena	1	• Replaced in 2008 with semi-public events center.
Wenatchee School District	Lewis and Clark Park	11	• --

Table 2-12: List of Parks within Chelan County Lines			
Management	**Name**	**Acres**	**Amenities**
Wenatchee School District	Recreation Park	9.11	• --
Wenatchee School District	Triangle Park	0.18	• --
Wenatchee School District	Western Hills Park	5	• Soccer and softball fields, play equipment.
State Agency			
Washington State Parks & Recreation Commission	25-Mile Creek	235	• An inland waters camping park on the forested south shore of Lake Chelan. The park separates the mountains from the lake and is surrounded by spectacular scenery. With its modern marina, the park affords visitors excellent boating access to the upper reaches of Lake Chelan.
WA Fish and Wildlife	Chelan Butte Wildlife Area	8,200	• Mostly dry grassland with some shrubs and riparian zones where most of the wildlife is. There is small game habitat favorable for upland birds including chukar, quail, grouse, and mourning doves.
WA Fish and Wildlife	Swakane and Entiat Wildlife Areas	19,200	• Mostly valley bottom near the Columbia River with numerous steep drainages that have perennial and intermittent streams. Major habitat types include sage steppe, ponderosa pine and several riparian draws.
Washington State Parks & Recreation Commission	Lake Chelan State Park	127	• Lake Chelan State Park is a camping park on the forested south shore of Lake Chelan. The park has 6,000 feet of shoreline, lakeside views and expansive lawns for strolling and playing.
Washington State Parks & Recreation Commission	Lake Wenatchee State Park	489	• A camping park with 12,623 feet of waterfront on glacier-fed Lake Wenatchee and the Wenatchee River. The park is bisected by the Wenatchee River, creating two distinct areas – South Park, with areas for camping, swimming and horseback riding; and North Park, in a less developed, forested section, a quarter-mile walk from the lake. The park is a natural wildlife area, and visitors should be aware of the presence of bears and other natural dangers.
Washington State Parks & Recreation Commission	Wenatchee Confluence State Park	200	• Park consists of two distinct areas. Facilities include camping, picnic shelters, boat launch and docking, swim area, multi-purpose play area, tennis courts, restrooms, and a trail system including interpretive signs and parking at various points.
Washington State Parks & Recreation Commission	Peshastin Pinnacles State Park	34	• A popular location for rock climbing, one and a half miles of trails and sandstone slabs and spires. Spires are as high as 200 feet.
Washington State Parks & Recreation Commission	Squilchuck State Park	288	• A camping park covered with forests of fir and ponderosa pine. The park sits at an elevation of 4,000 feet. A new system of mountain bike trails built and maintained by Evergreen Mountain Bike Alliance adds to the recreation opportunities of the park.
Federal Land			
National Park Service	North Cascades National Park	504,6543	• The North Cascades National Park Complex encompasses North Cascades National Park, Ross Lake and Lake Chelan National Recreation Areas.
National Park Service	Lake Chelan National Recreation Area	61,949	• The Lake Chelan National Recreation Area surrounds the northern end of Lake Chelan and the community of Stehekin. There are no roads to the Recreation Area and access is limited to foot, boat, or plane. Some of the possible experiences include accessible trails to world class mountaineering, hiking, camping, wildlife viewing, relaxation, boating and fishing.
Forest Service	Mt. Baker Snoqualmie National Forest	1,724,229	• Includes parts of Alpine Lakes, Henry M Jackson, and Glacier Peak Wilderness Areas.

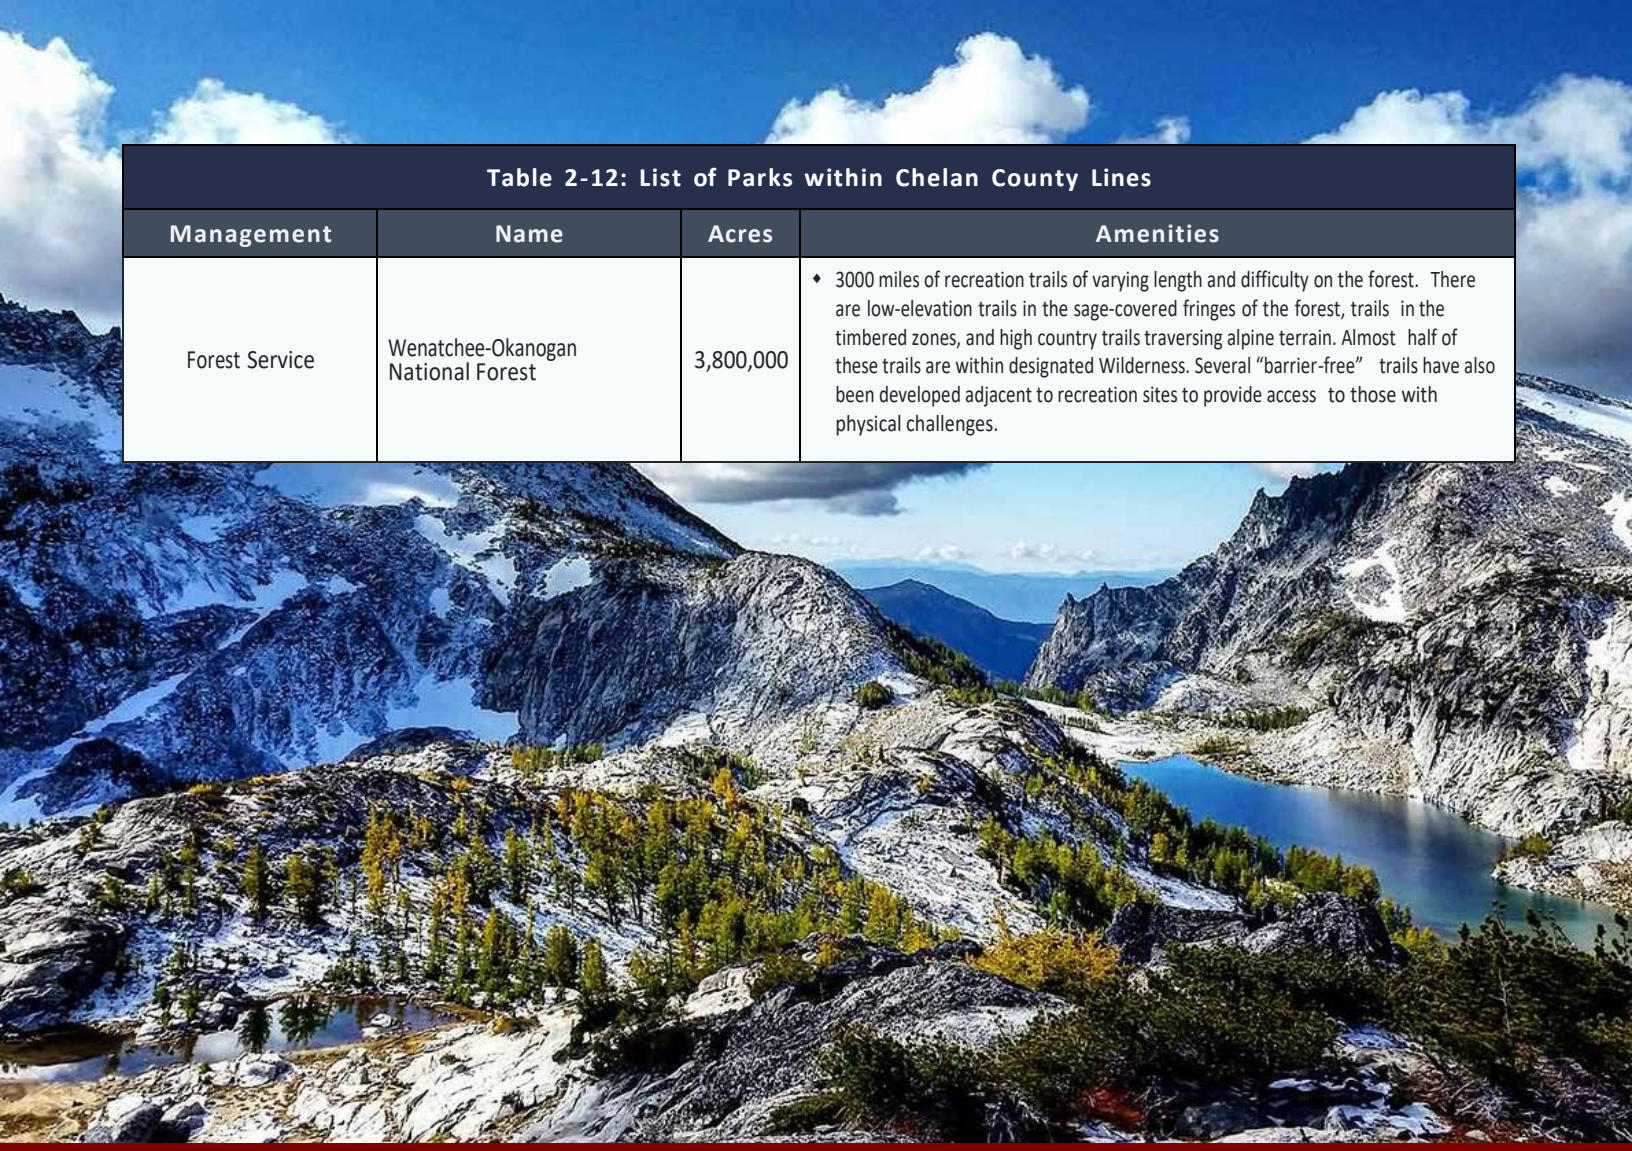

Table 2-12: List of Parks within Chelan County Lines			
Management	**Name**	**Acres**	**Amenities**
Forest Service	Wenatchee-Okanogan National Forest	3,800,000	◆ 3000 miles of recreation trails of varying length and difficulty on the forest. There are low-elevation trails in the sage-covered fringes of the forest, trails in the timbered zones, and high country trails traversing alpine terrain. Almost half of these trails are within designated Wilderness. Several "barrier-free" trails have also been developed adjacent to recreation sites to provide access to those with physical challenges.

There are many recreation opportunities on Federal lands throughout the County. The County includes portions of North Cascades National Park and all of Lake Chelan National Recreation Area, which the National Park Service manages. There are also several developed campgrounds on National Park Service lands in the vicinity of Stehekin, including:

- High Bridge
- Tumwater
- Shady
- Purple Point
- Weaver Point
- Harlequin

Okanogan-Wenatchee National Forest manages four federally protected Wilderness Areas that have boundaries within the County:

- Glacier Peak
- Henry M Jackson
- Alpine Lakes
- Lake Chelan-Sawtooth Wilderness Areas.

There are multiple recreational opportunities available on US Forest Service property, including hiking, mountain biking, and motorized trails, drive-in and remote campgrounds, and day use and trailhead facilities. There are approximately 70 developed Forest Service Campgrounds in Chelan County.

Table 2-13: Chelan County School Districts

School District	Number of Schools	Students
Cashmere School District 222	3 Schools	1,556
Lake Chelan School District 129	5 Schools	1,459
Entiat School District 127	2 Schools	341
Cascade School District 228	6 Schools	1,336
Manson School District 19	2 Schools	671
Stehekin School District	1 School	8
Wenatchee School District 246	16 Schools	7,931
Private Schools	7 Schools	838

The School Districts in Chelan County provide many sports fields and indoor venues, but public access is limited by school activities. Facilities often are most often not available to the general public, but only at predetermined times.

Planning Context

Existing Plans Working Together

In the formation of this plan, any plans that have already been completed or are underway that are relevant to Chelan County's parks, recreation, and open space goals have been reviewed and incorporated as necessary. The plans that have been reviewed include:

Table 2-14: Existing Plans Relevant to the PROS Plan Update

Source	Year	Type	Title	Geographic Scope	Diversity	Notes
Chelan County Natural Resources Dept	2017	Planning Document Informed by Public Input	Parks and Recreation Element of Chelan County Comprehensive Plan	Chelan County	--	Top community priorities from public engagement focused on collaboration to achieve common recreation goals: • better collaboration between land/recreation resource managers; • increase in organized recreation advocacy groups. Goals identified in the plan focus on more passive role for County in encouraging the addition/improvement of open space and recreation opportunities, as well as increased coordination for efficiency/ effectiveness of operations, but also to ensure alignment with other important community factors (housing supply, critical habitat, water resources, etc.)
Trust for Public Land	2018	Vision Document Informed by Public Input	Lake Chelan Community Open Space Vision	Southernmost portion of Lake Chelan Basin, including Chelan and Manson.	76% White/ non-Hispanic respondents; 19% Hispanic respondents	Top community priorities from survey were • protecting Lake Chelan water quality and • increasing public access to Lake Chelan. The final list of top open space goals: • Protect water quality; • Promote community health through increasing access to trails, parks, and the lake; • Protect wildlife habitat; • Preserve agricultural land.
Chelan County Natural Resource Dept.	2019	Planning Document Informed by Public Input	Stemilt-Squilchuck Recreation Plan	Stemilt-Squilchuck Basin, southern Chelan County	---	Detailed plan for improvements, development of new amenities or infrastructure, and longterm management objectives for both summer and winter recreation. Implementation Committee coordinated by CCNRD.

Table 2-14: Existing Plans Relevant to the PROS Plan Update						
Source	Year	Type	Title	Geographic Scope	Diversity	Notes
Chelan County Natural Resource Dept.	2019	Management Plan Informed by Advisory Committee	Nason Ridge Community Forest Management Plan	Lake Wenatchee Area	--	Wholistic management plan that includes recreation management. Rec mgmt goals generally focus on continuing to provide access to the property, and improving recreation opportunities that are compatible with other management objectives, with special focus on children, underserved communities, and providing for hunting opportunities. Continued management will be guided by a Stewardship Committee
Chelan PUD	2020	Feasibility Study	Wenatchee River Whitewater Park Feasibility Study	Wenatchee River Corridor	N/A	Out of 6 sites evaluated, feasibility study identified 1) Dryden Dam and 2) historic mill dam in Leavenworth as two most suitable sites for whitewater park development based on the following criteria: adequate hydraulic drop, existing park infrastructure, adj. public property ownership, geomorphic suitability, constructability, river reach degraded, habitat improvement potential, safety improvement potential.
Upper Valley Parks & Recreation Service Area	2021	Report of Survey Data	Needs Assessment	Upper Valley PRSA (similar to Cascade, SD, minus Plain/Lake Wenatchee)	Respondents: 85% Caucasian, 8% Latino	Improvements with most support from respondents: • trail connecting Leavenworth/Peshastin; • year-round covered aquatic center; • trail connecting Leavenworth/Wenatchee; • more multi-use hiking/biking trails
Chelan County Natural Resource Dept.	2021	Planning Document Informed by Public Input	Chelan County Multimodal Pathways Plan	Chelan County	Respondents: 81% Caucasian, 3% Latino	Identified priority corridors connecting communities or major destinations: • Leavenworth to Lake Wenatchee area • Shore of Lake Chelan • Chelan to Manson • Wenatchee to Leavenworth • South of Wenatchee • Wenatchee to Chelan • East Leavenworth & Icicle Roads.
Our Valley Our Future	2022	Planning Document Informed by Public Input	Action Plan	Chelan and Douglas Counties	Survey/input: 26% Latino	Community input placed high value on open space, public access and recreation resources. Relevant action items identified: Active Transportation with connected pathways; Recreational stewardship; Funding for trails & open space; Frontcountry trails expansion; Trails & Access Infrastructure; Whitewater Park on the Wenatchee. Keep in mind: demand for local and regional recreation & sports centers.

Table 2-14: Existing Plans Relevant to the PROS Plan Update						
Source	Year	Type	Title	Geographic Scope	Diversity	Notes
Chelan County Public Works	2022	Inventory Data	Recreation Access Inventory and Assessment	Chelan County	N/A	Inventory & analysis of the distinct recreation access sites that are currently within a Chelan County road ROW. Many sites are used for river access, and some for authorized or unauthorized trail systems. Overall, recommendations focus on creating parking space & trailheads in a formalized way on land adjacent to current ROW informal use.
TREAD	2023	Survey Data	Central Washington Outdoor Recreation Survey	Chelan and Douglas Counties	N/A	Survey respondents (nearly all residents) identify Wenatchee Mtns in southeastern Chelan County as the place they visit most for outdoor recreation, followed by Alpine Lakes area, Lake Wenatchee Area, and the 'Canyons' area north of Hwy 2 between Leavenworth and Wenatchee. Top desires: More trails, but especially paved pathways between communities; maintenance of existing trails & access infrastructure; improved access points (trailheads).
Chelan Douglas Regional Port Authority	2023	Survey & Inventory Data	Regional Sports Complex Feasibility Study: Phase 1 Findings	Chelan and Douglas Counties	N/A	Study indicates population growth trends, including relatively significant 25% increase in population under 40 by 2050. Survey & inventory focused on sports fields and aquatic resources, but several mentions of pathways as a method of safe transportation to reach a regional sports facility.
Visit Chelan County	2023	Survey Data	Destination Master Plan	Chelan County	Respondents: 86.9% Caucasian	Resident survey key findings: 1) Visitor impact at high use locations is a significant issue, and visitor impact management strategies are needed; 2) Outdoor recreation is a primary driver of visitation, and there is a need to strengthen collaboration among the outdoor industry and tourism; 3) Mobility, access, and connectivity are significant challenges across the county, and transportation solutions are needed; 4) Sports facilities and infrastructure is needed to support recreation and events.
City of Wenatchee	2023	Planning Document Informed by Public Input	Parks, Recreation, and Open Space (PROS) Plan	Greater City of Wenatchee area	--	Public survey section notes that top two outstanding capital projects from previous planning that had highest community support were: • constructing more trails and • acquiring more property for open space and habitat.

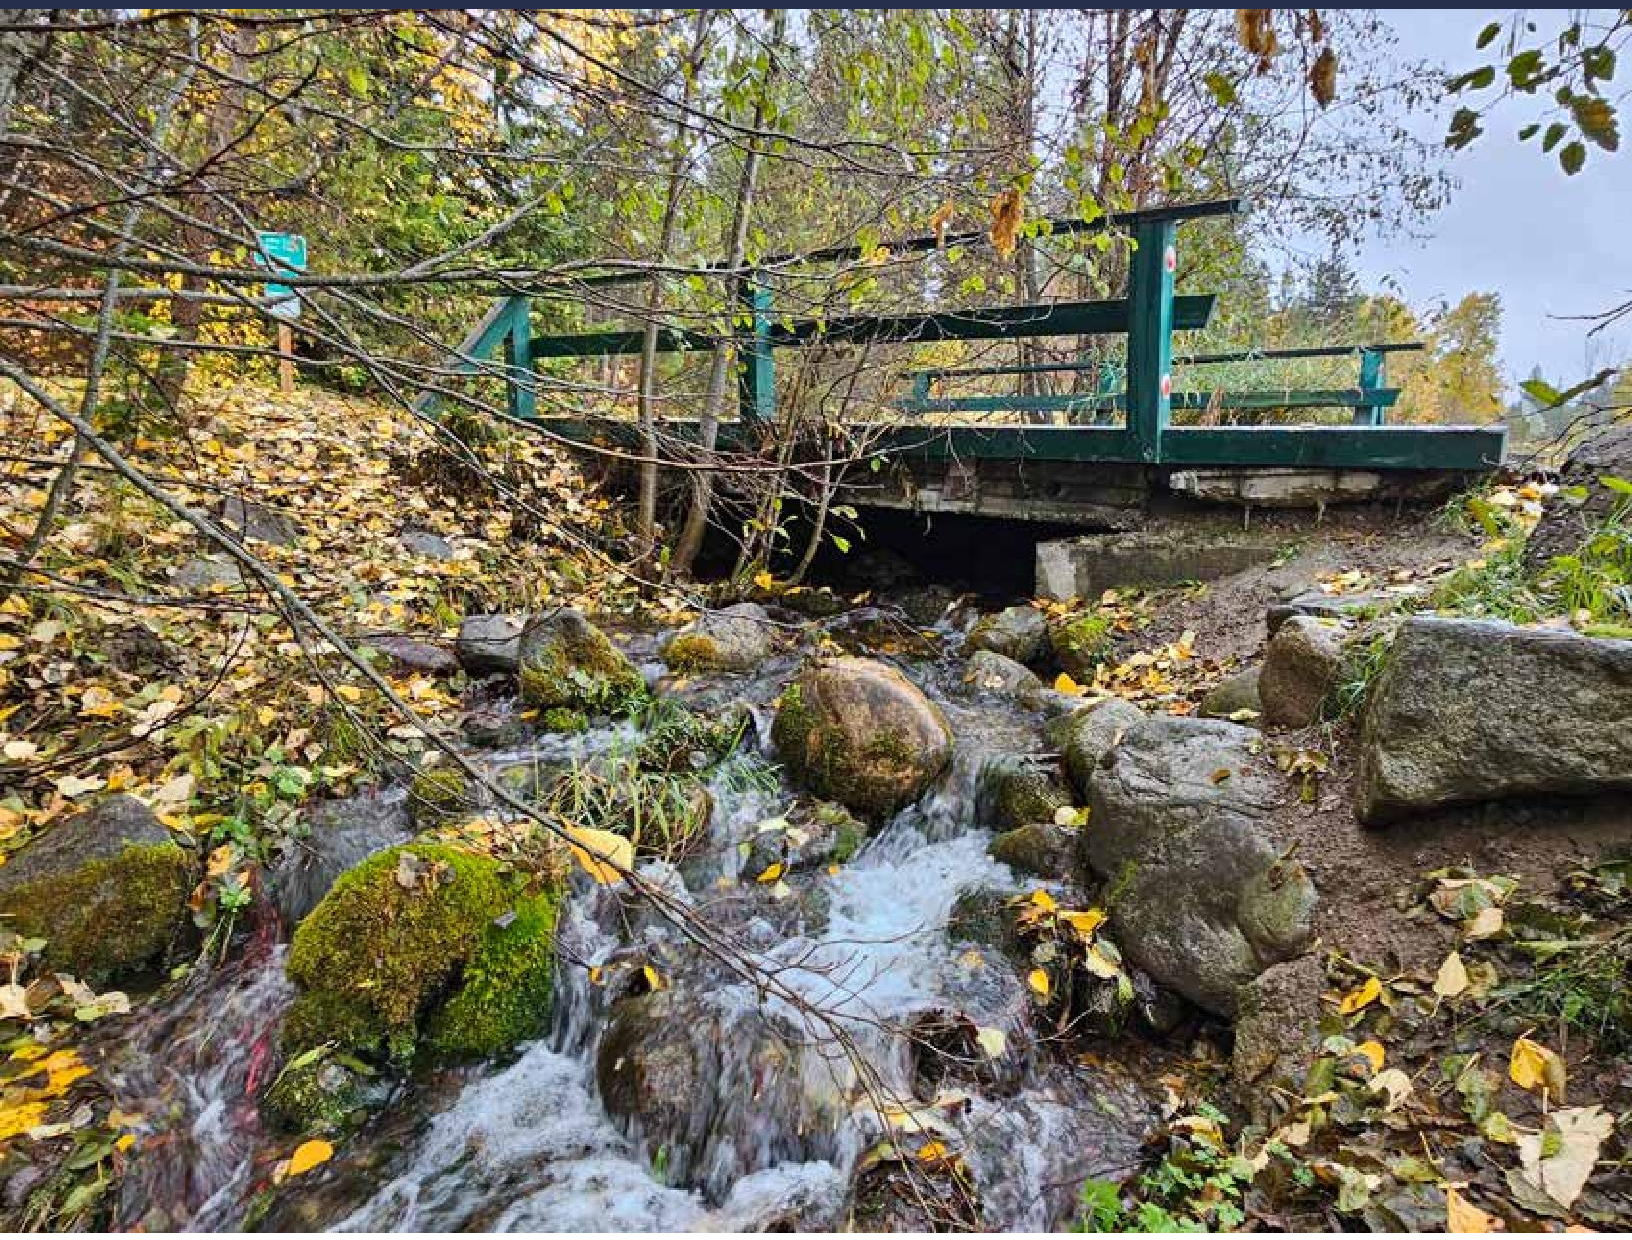

Table 2-14: Existing Plans Relevant to the PROS Plan Update						
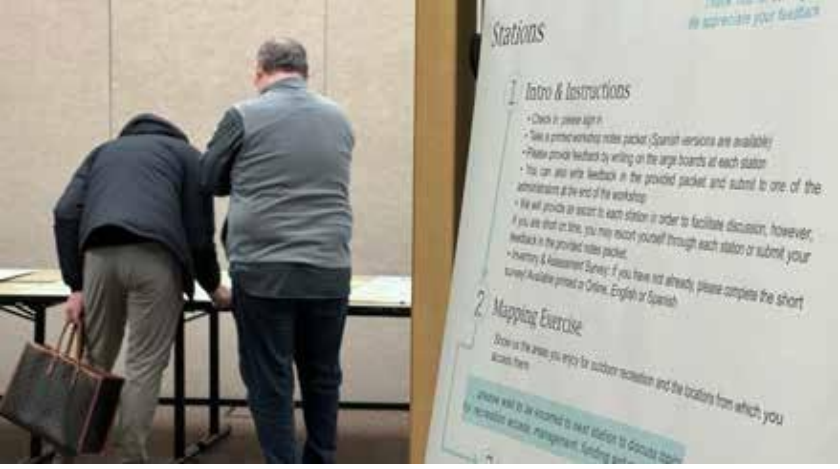
Source	Year	Type	Title	Geographic Scope	Diversity	Notes
City of Cashmere	2023	Planning Document Informed by Public Input	Cashmere Parks, Recreation, and Open Space (PROS) Plan	City of Cashmere	Respondents: 10% self-identified Latino	Focus on urban parks and trails, but specifically calls out trail connections in unincorporated county, as well as the formation of a City trails committee to achieve this goal. Goal 4. Connectivity: Provide an interconnected network of multi- use trails, walkways, and bikeways connecting city and regional destinations.
Trust for Public Land	2016 & present	Vision Document Informed by Public Input	Upper Wenatchee Community Lands Plan	Upper Wenatchee River Watershed: Cashmere/ Mission Cr, Blewett/ Peshastin, Leavenworth, Chumstick	--	2016 plan was developed to anticipate long-range planning for the 38,000 acres of private commercial timberlands owned in Chelan County. This plan is currently being updated as the landowner has changed, and real timelines associated with a phased option to acquire the lands are in play.
Chelan County Natural Resource Dept./ City of Leavenworth	2023-2024	Planning Document Informed by Public Input	River Recreation Management Plan for the Wenatchee River & Icicle Creek Near Leavenworth	Portion of Wenatchee River near Leavenworth, incl. lower reaches of Icicle Creek	--	Report based on user data and public input collected in 2020 and 2023. Managing heavily used river access sites in the study area is challenging due to multiple jurisdictions and inadequate amenities (incl. parking). Report suggests staffing specifically for managing river recreation, and also establishing a user registration fee system to fund staffing. Chelan County needs to consider how to build this into current public engagement process.
City of Wenatchee	2023 & present	Planning Document	Reimagine Wenatchee Master Plan	Portion of Downtown Wenatchee & Colombia Waterfront	Unknown as of yet	Only discovery phase has been completed, results linked. Process may affect management of and scope of recreation resources provided along Loop Trail/ waterfront in downtown area.
Chelan County Natural Resource Dept.	2025	Planning Document Informed by Public Input	Chelan County Motorized Recreation Plan	Chelan County	--	Inventory of current motorized recreation opportunity, economic impact, and synthesis of public input on desired future opportunities/improvements around motorized recreation in Chelan County.

Assessment

Assessing the quantity and quality of parks and recreation facilities in Chelan County is crucial to establishing standards for the level of service. These standards should reflect the community's fundamental recreation needs and expectations. Currently, Chelan County lacks officially adopted standards for parks and recreation at the county level. However, various planning entities have different facility requirements and have implemented distinct levels of service.



Cities and service providers have outlined urban levels of service within municipal boundaries and adjacent urban growth areas, with a notable emphasis on the Wenatchee planning area. Although there are numerous recreational opportunities within the county, there is a lack of metrics to gauge the quality and distribution of these parks and recreation options.

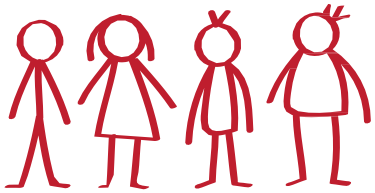
Public engagement is a crucial component in this planning process. Other regional planning initiatives suggest that the county should prioritize parks and recreation efforts toward enhancing connectivity to existing opportunities and creating more access points to the County's diverse range of outdoor recreation options. Additionally, fostering partnerships and coordinating regional-scale planning activities, which often span multiple jurisdictions, is essential. Access and linkages to federally owned lands are critical components of the overall parks and recreation system in the county.

Public Involvement

Introduction & Purpose

The successful development and execution of a parks, recreation, and open space system hinge on attentive listening to the community's needs, demands, and ideas. Recognizing that decisions are made by those who actively participate, it was crucial to implement an effective public involvement process that offered multiple opportunities for Chelan County citizens and visitors to shape the process and outcomes. These opportunities included:

1. *Comprehensive Recreation Element Survey*
2. *Public Open Houses*
3. *Commission Public Hearing (Upcoming)*



With grant programs and decision-makers emphasizing an understanding of a community's desired quality of life, public involvement becomes the most vital and time-consuming aspect of the planning process. This phase allows for a thorough assessment of the community's aspirations. The public and users can share their ideas, goals, and objectives for the parks system, ensuring alignment with the community's needs.

The public involvement approach aimed to maximize an equitable distribution of needs, wishes, and ideas from the public. To reflect Chelan County's community and its shared interests, needs, and priorities, specific engagement goals were identified.

Engagement Goals

1. Ensure equitable distribution of survey results throughout the whole County.

Gathering survey results from every populated area within the county is crucial for understanding its diverse communities. This approach ensures a holistic understanding of the community's needs, enabling tailored strategies for resource allocation, interventions, and community engagement.

2. Create multiple virtual and analog engagement opportunities.

Alongside online surveys, in-person workshops in North and South County provided additional opportunities for participation. Various organizations and agencies also actively shared surveys with their members, ensuring a diverse range of voices.

3. Monitor & adapt the survey as results are dynamically captured

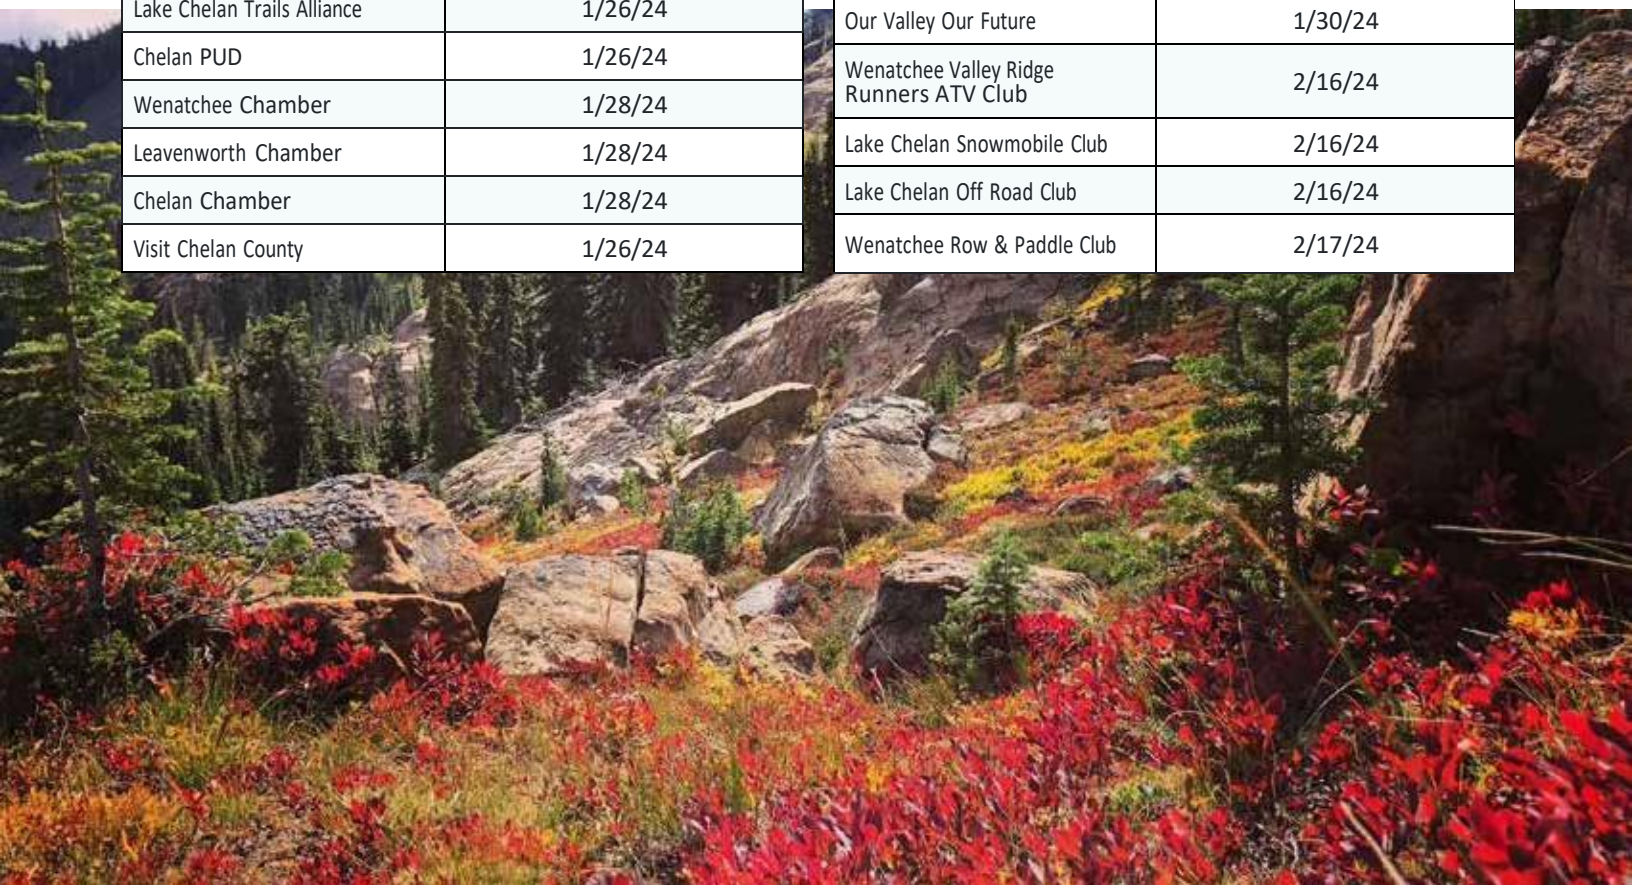
Real-time collection of survey results requires cross-referencing with the community demographic profile from the latest US census data. This ensures accurate representation and allows adjustments to target missing or under- represented demographics.

4. Provide a broad range of constituents with the ability to supply both broad and specific action-oriented feedback.

The planning process facilitated the expression of broad needs and desires and identified site-specific desires within parks or recreation destinations. It aimed to offer tangible ways for the public to make a meaningful impact, drawing participants representing the true profile of all residents and recreational users within the County.

Public Engagement Plan Overview

The engagement plan was organized around a series of both virtual and analog, in-person events.



#1	Online Recreation Element Survey	Late Jan-Feb
#2	Public Workshop #1 (Chelan)	Feb 7th
#3	Public Workshop #2 (Wenatchee)	Feb 8th
#4	Public Commission Hearing	Late March

Distribution

Marketing of the survey and its distribution occurred from several distinct actions. A list of stakeholders, partnering agencies, and other community groups was identified, and the engagement flyer and its direct link were sent. Surveys were distributed in both English and Spanish to the groups listed in Table 3-1 on the following page.

In addition, several social media boosts were scheduled over the month of February for both Facebook and Instagram and a webpage was developed on Chelan County's website where the survey and other background information could be found. Metrics for the social media boosts are shown on the following pages.

Table 3-1: Survey Distribution	
Organization	**When?**

Chelan County Boost Analytics- February 2024

February 2nd Boosts

Facebook - English

Good distribution of ages outside of very young. 12 shares! That's a lot and undoubtedly helped these numbers.

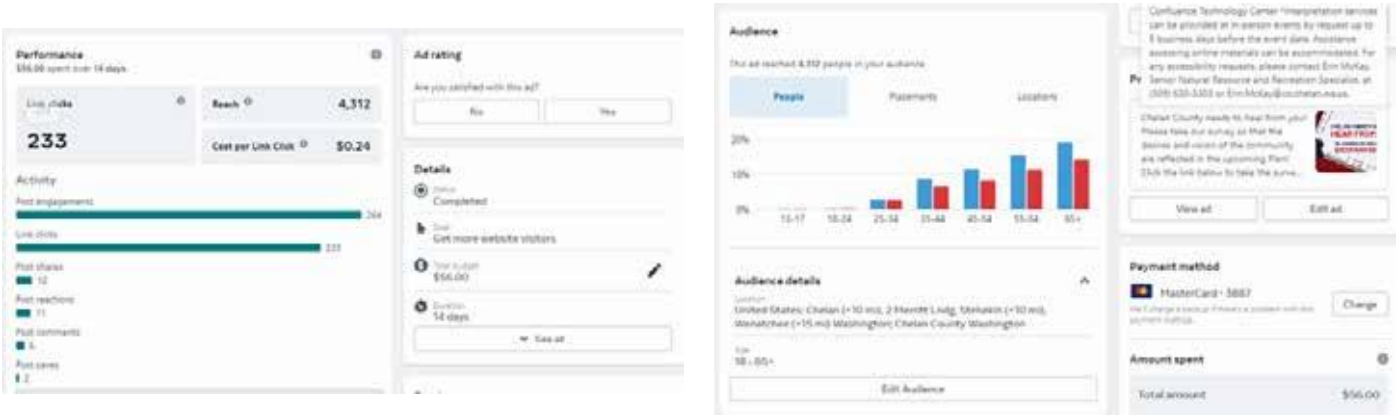

Figure 3.1: February 2nd Facebook Boost Analytics - English

Facebook - Spanish

Reached about the same number of people but had significantly less link clicks. Demographics skewed more towards middle age.

Figure 3.2: February 2nd Facebook Boost Analytics - Spanish

Instagram - English

Skewed much younger, link click number is great but not phenomenal. Would like to see link clicks over time.

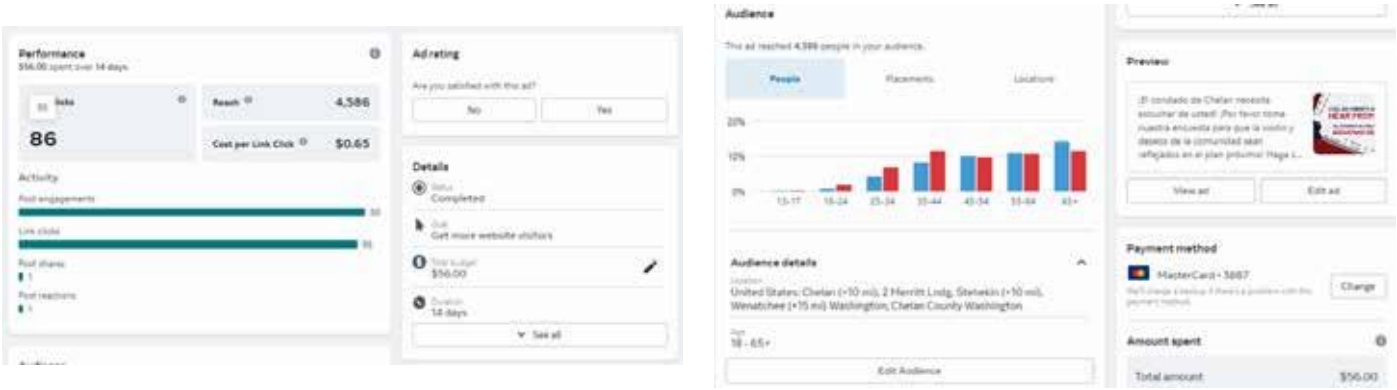

Figure 3.3: February 2nd Instagram Boost Analytics - English

Instagram - English

Reached mostly the very young, about the same number as the English post but less than half clicked it. Wondering if its because most people that saw it didn't speak Spanish.

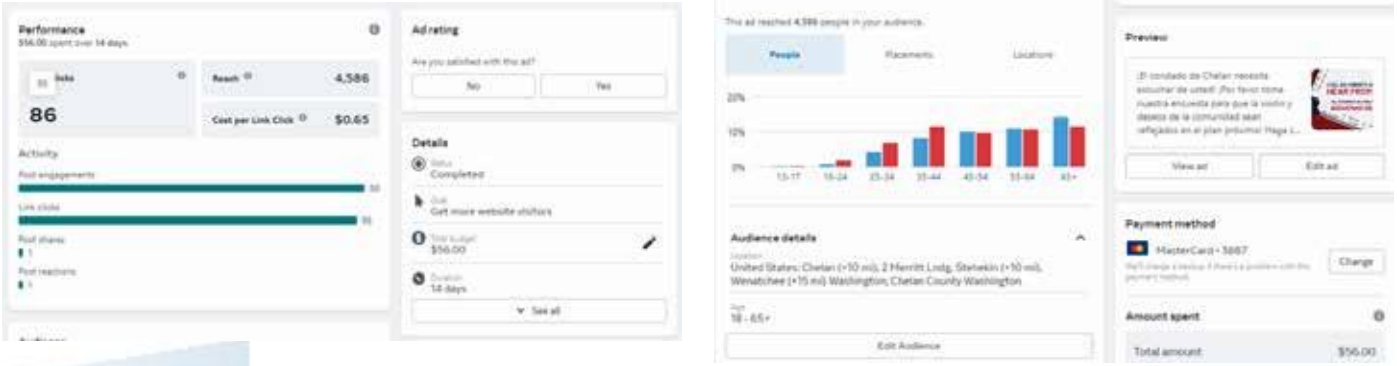

Figure 3.4: February 2nd Instagram Boost Analytics - Spanish

February 26th Boosts

Facebook - English

This was for half the time as the last one, but $20 more in cost for half the number of clicks.

Figure 3.5: February 26nd Facebook Boost Analytics - English

Facebook - Spanish

This performed about the same as the last FB Spanish post that ran for half the time.

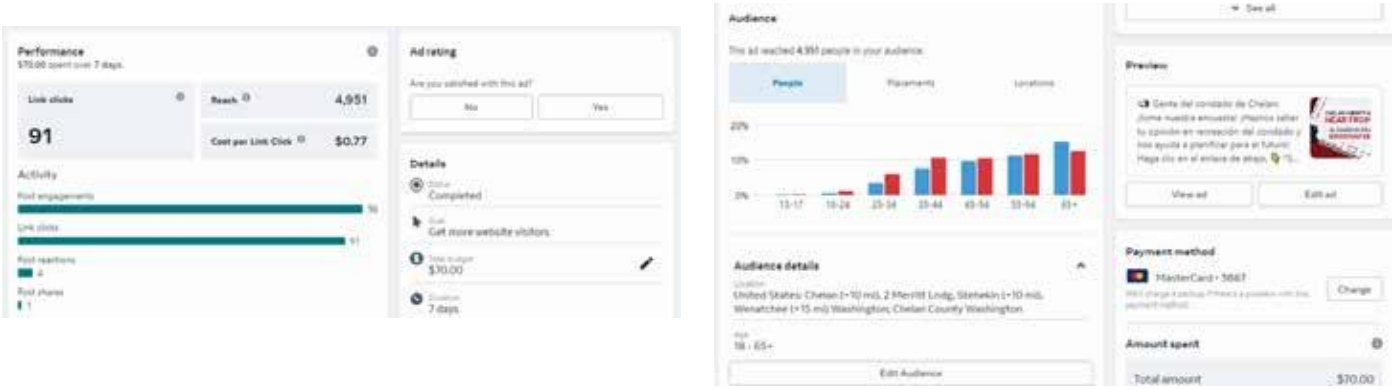

Figure 3.6: February 26nd Instagram Boost Analytics - Spanish

Instagram - English

40 less link clicks on the same reach compared to the last one.

Figure 3.7: February 26nd Instagram Boost Analytics - English

Instagram - Spanish

This actually reached more people and generated about the same number of clicks as the last one. Both heavily skew younger.

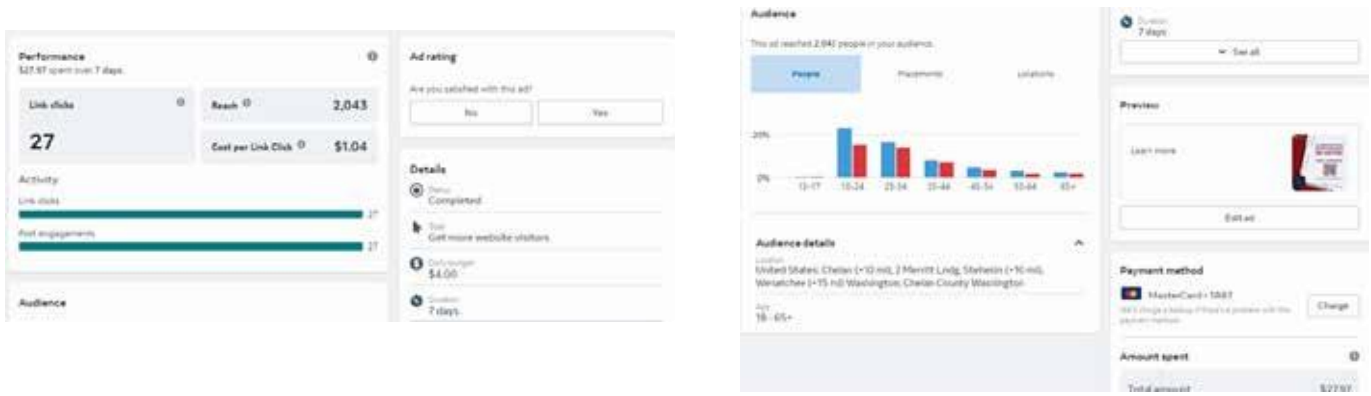

Figure 3.8: February 26nd Instagram Boost Analytics - Spanish

Recreation Element Survey

The first engagement touchpoint as developed in Alchemer, a software platform that provides survey and feedback solutions. Formerly known as SurveyGizmo, Alchemer offers a range of tools for creating and conducting online surveys, and to gather valuable feedback from target audiences about their use patterns, desires & needs, to better understand the needs and parks usage of the Chelan County community. This survey was open to all residents and to, visitors and people in neighboring communities.

The survey was designed to capture the following questions:

1. ***How often do you visit these facilities owned and managed by Chelan County?***
2. ***Which outdoor recreation sites in Chelan County have you accessed before?***
3. ***What barriers do you experience accessing open space and recreation opportunities in Chelan County?***
4. ***Which public access and recreation resources are most important to add in Chelan County? These options are based on a variety of recent past surveys and planning documents in our region.***

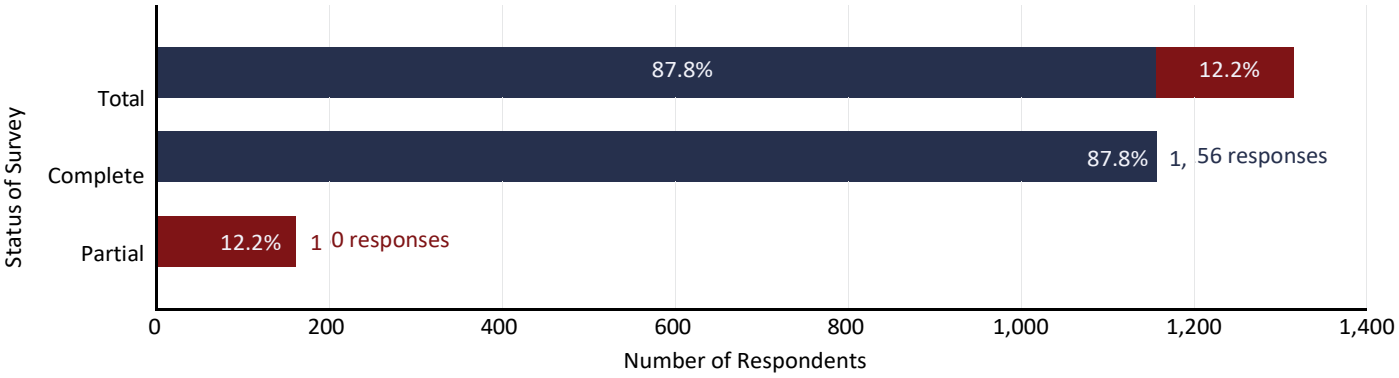

Figure 3.10: Chelan County's Public Engagement Plan Flyer

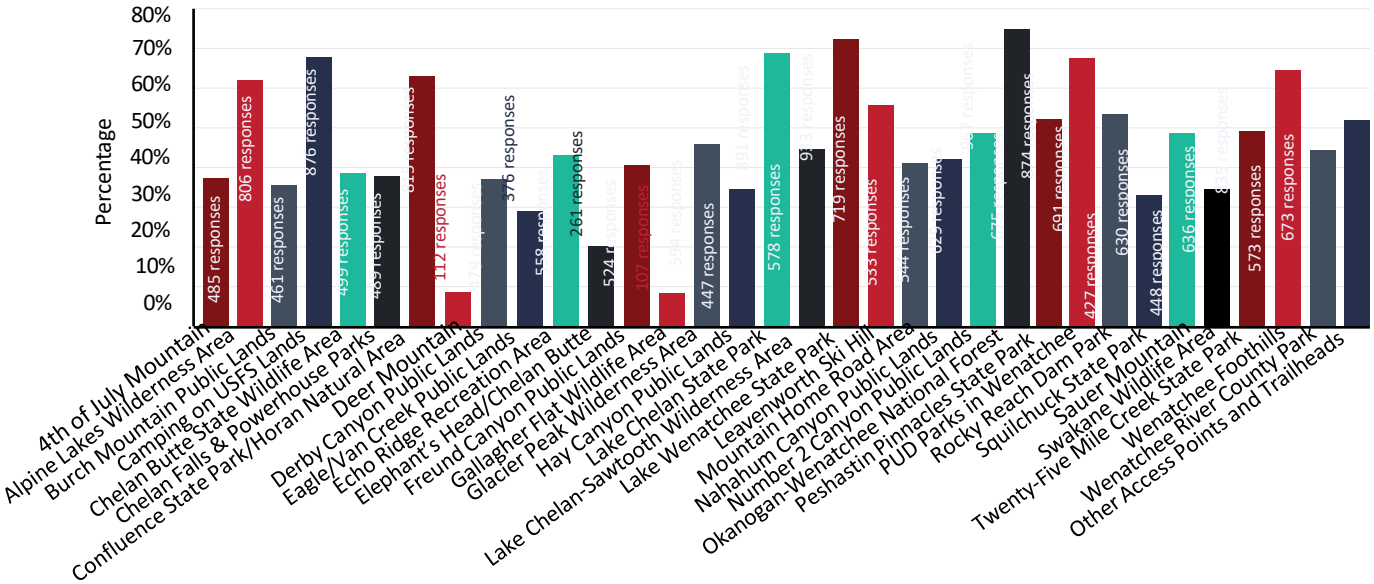
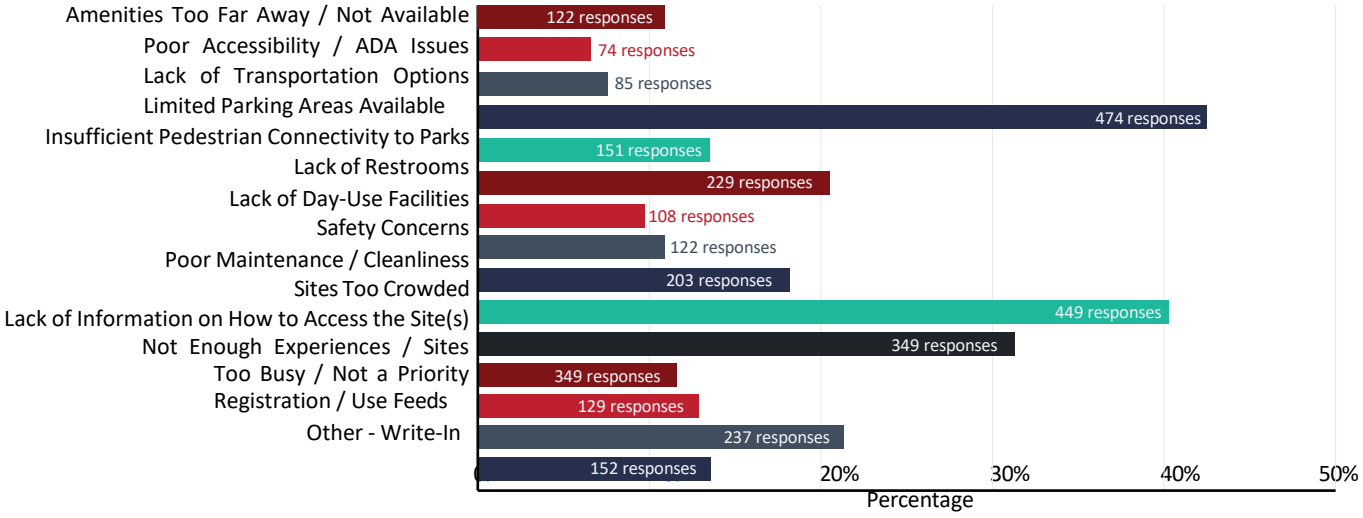
5. ***It requires funding to improve amenities, provide better access to outdoor recreation, and support the operations and maintenances of these amenities. How would you be willing to fund improvements?***
6. ***Would you support increased maintenance, access, and amenities in currently unmanaged areas, even if that meant increased oversight and use guidelines?***

Lastly, some very generic and optional demographic questions were asked so that the survey results could be tested against the established County demographic profile for consistency of representation, including where people lived, connections to the County, age, household size, ethnic or racial group, gender, languages, spoken, and the ability to signup for continued results.

Survey Key Takeaways



Together, the number of respondents who took the survey or participated in the in-person workshops resulted in over 1,300 surveys and almost 50 in-person attendees.

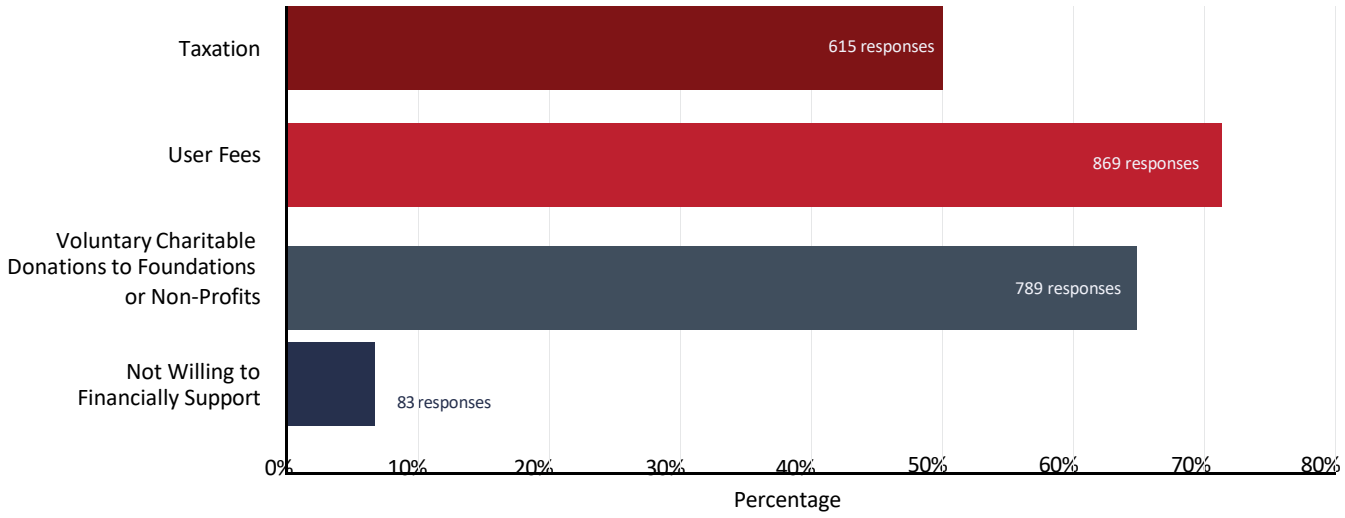


1. How often do you visit these facilities owned and managed by Chelan County?

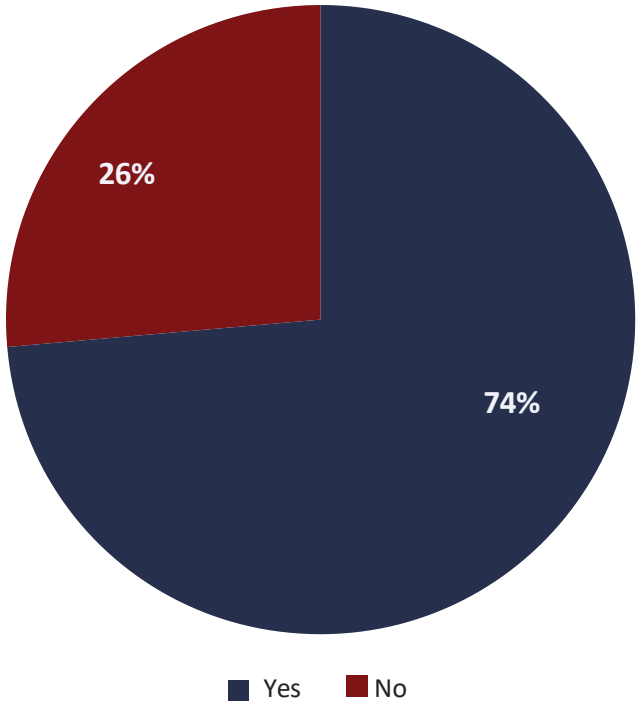
Facility	Daily	Weekly	Monthly	Yearly	Never	Responses
Chelan County Fairgrounds & Expo Center	2 responses (0.2%)	5 responses (0.4%)	25 responses (2.0%)	643 responses (50.2%)	605 responses (47.3%)	1,280 total
Nason Ridge Community Forest	1 response (0.1%)	38 responses (3.0%)	182 responses (14.3%)	523 responses (41.0%)	533 responses (41.7%)	1,277 total
Ohme Gardens	3 responses (0.2%)	13 responses (1.0%)	40 responses (3.1%)	619 responses (48.6%)	598 responses (47.0%)	1,273 total
Stemilt-Squilchuck Community Forest	16 responses (1.3%)	71 responses (5.6%)	254 responses (19.9%)	440 responses (34.4%)	497 responses (38.9%)	1,278
TOTALS						**5,108 responses (100.0%)**

2. Which outdoor recreation sites in Chelan County have you accessed before? Select all that apply.

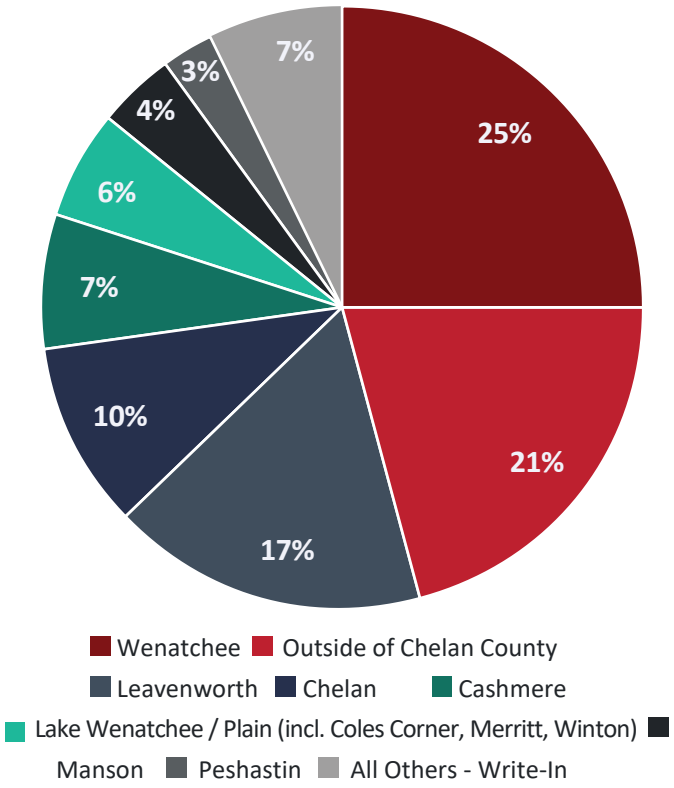
3. What barriers do you experience accessing open space and recreation opportunities in Chelan County? Select all that apply.



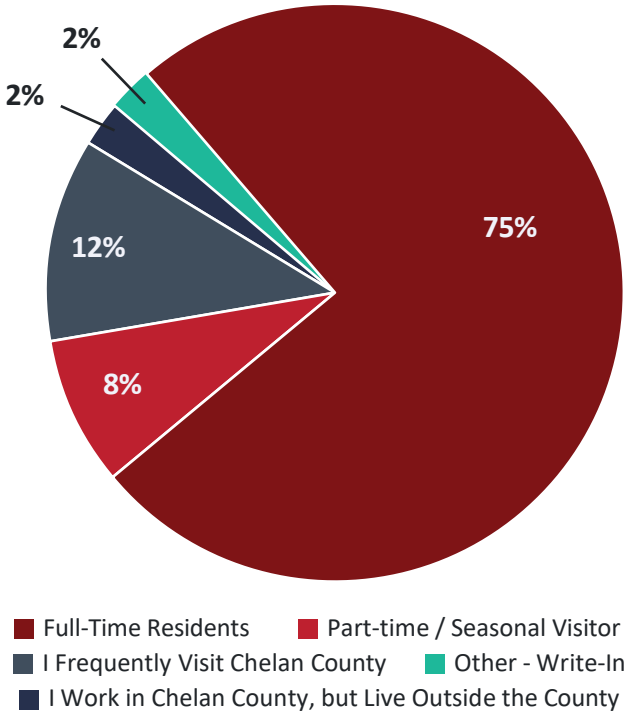
4. Which public access and recreation resources are most important to add in Chelan County? These options are based on a variety of recent past surveys and planning documents in our region.



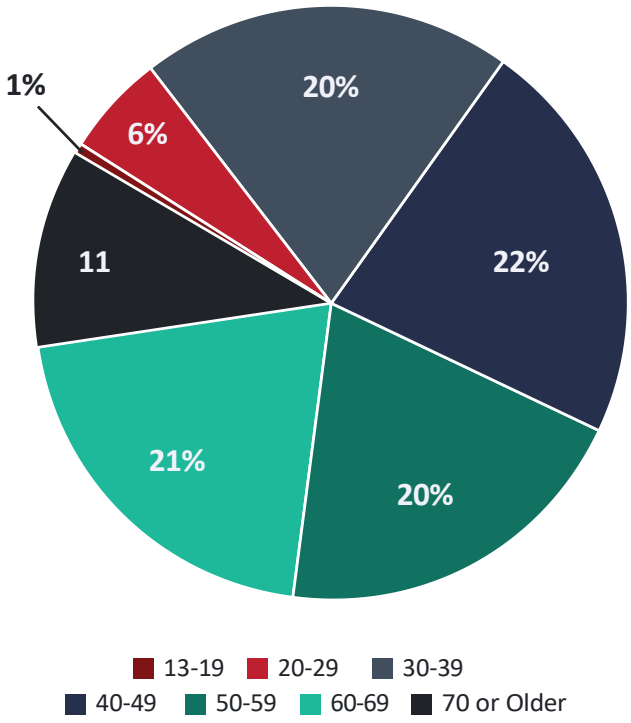
Item	Overall Rank	Rank Distribution	Score	No. of Ranking
Developed/managed access points and trailheads for public lands	1		8,328	837
Public water access to rivers in Chelan County	2		8,107	824
Multi-modal pathways connecting communities in Chelan County	3		7,884	791
Public water access to Lake Chelan	4		7,454	788
Native-surface trails in non-wilderness open lands/space	5		6,638	733
Developed campgrounds	6		5,590	700
Opportunities for mountain bike skills park	7		5,234	698
Developed parks with high levels of day-use amenities	8		5,108	639
Opportunities for ORVs	9		5,025	709
Whitewater park on the Wenatchee River	10		4,605	646
Sports courts or active recreation areas	11		4,421	628
Athletic fields for soccer or baseball	12		3,751	599
Opportunities for winter motorized recreation	13		3,741	623



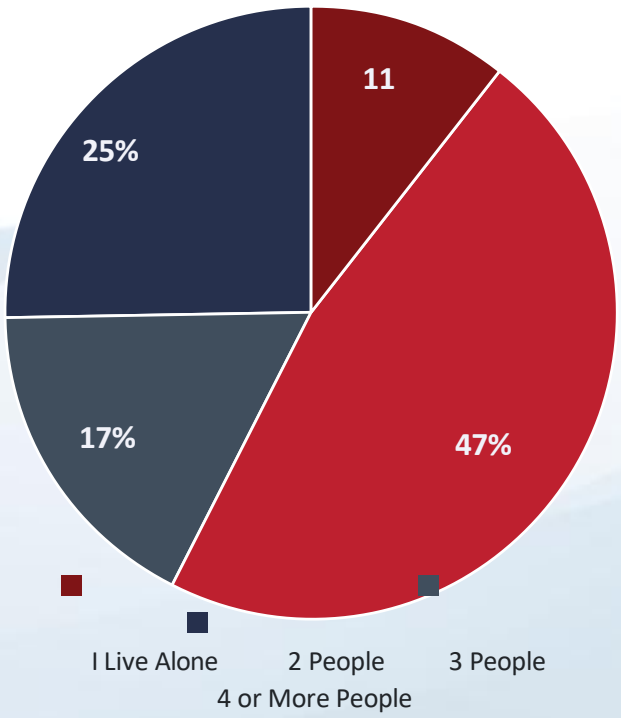
5. It requires funding to improve amenities, provide better access to outdoor recreation, and support the operations and maintenances of these amenities. How would you be willing to fund improvements? Select all that apply.



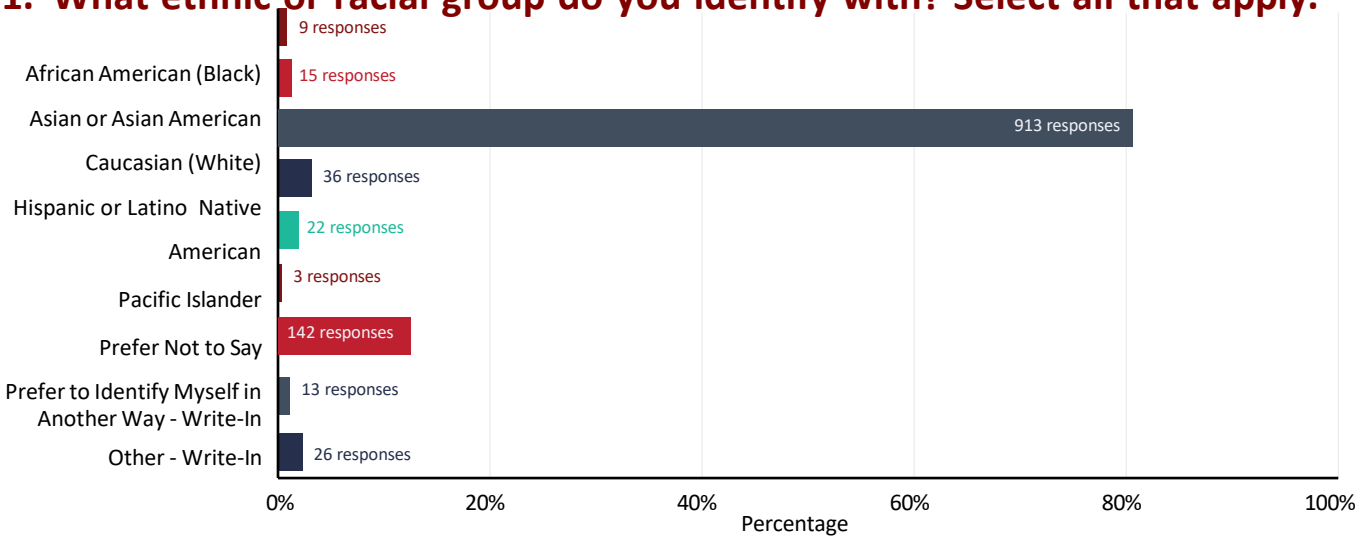
6. Would you support increased maintenance, access, and amenities in currently unmanaged areas, even if that meant increased oversight and use guidelines?



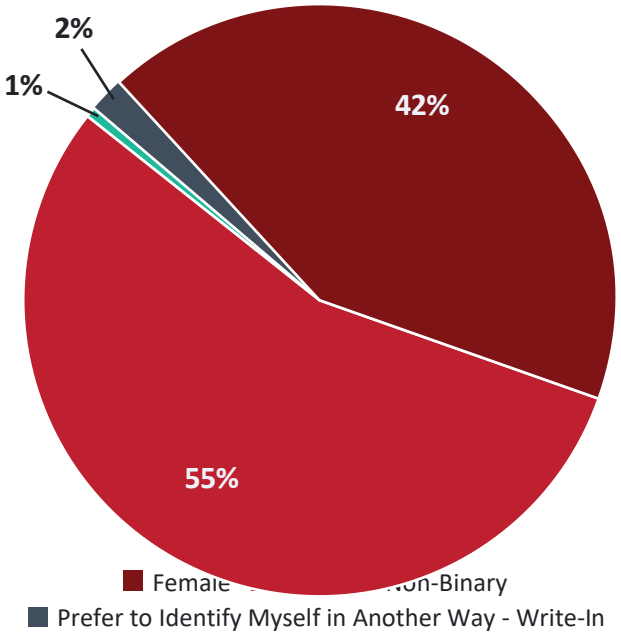
7. Where do you live?



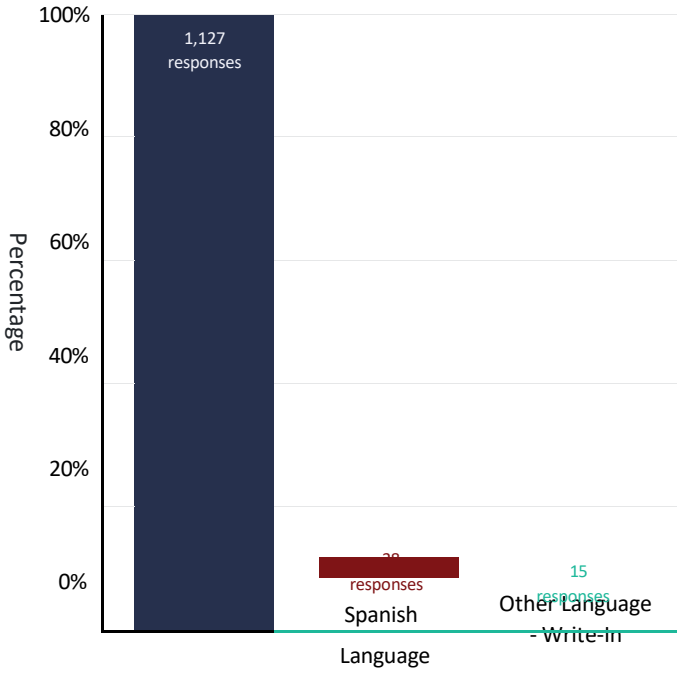
8. What best describes your connection to Chelan County?



9. What is your age range?



10. What is your household size, including yourself?



11. What ethnic or racial group do you identify with? Select all that apply.

12. How do you identify your gender?

13. What languages are most often spoken in your home? Select all that apply.

Demand & Needs Analysis

Introduction & Purpose

The survey highlights various barriers and concerns faced by respondents in Chelan County related to outdoor activities and recreational access. One recurring theme is the state of road conditions, with mentions of poor maintenance, rough roads, and closures impacting accessibility to trailheads and recreation areas.

Safety concerns are raised, particularly regarding wildfire prevention and homeless camps. There's also a desire for improved fire-wise prevention measures and increased safety in areas like Hay Canyon, where homeless camps and shooting activities are reported.

Recreational enthusiasts express frustration over limitations on ATV and motorcycle use and the need for better infrastructure, such as boat ramps and improved access to rivers. Some respondents indicate a fear of going alone, emphasizing the importance of safety and the need for knowledgeable companions.

Additional issues include inadequate trail signage, concerns about inappropriate behavior in parking areas, such as break-ins and unsanitary conditions, and frustrations with excessive government regulation and fees.

The feedback suggests a need for better road maintenance, enhanced safety measures, increased access to recreational areas, and improved communication about available amenities. Additionally, addressing issues related to homelessness and ensuring proper regulation enforcement are identified as crucial steps toward creating a more enjoyable and secure outdoor experience for the community.

As outlined in survey responses, the public's demands for Chelan County's parks and recreation system are multifaceted and reflect a diverse set of priorities.

Trends for Parks and Recreation

A review of national and regional recreation trends offers another strategic avenue for identifying potential future park needs. These insights can be evaluated alongside survey findings and relevant plans. A summary of national trends, state trends, and emerging issues and needs are highlighted below and warrant consideration as the County's specific needs are addressed.

National Trends

Pickleball and Padel

Pickleball has continued to grow as one of the most popular recreational activities nationwide and shows no signs of slowing down. The 2023 APP Tour's Pickleball Participation Report shared that there are 36.5 million pickleball players in the United States. The sport is easy to learn, accessible to most ages and ability levels, and doesn't' require expensive equipment. On average, 130 new pickleball locations are created each month. Currently, several municipalities in Chelan County have either added pickleball courts or are in the process of adding more capacity to meed the demand.

Similar to pickleball, Padel is a racket sport of Mexican origin gaining popularity across the United States. This game is a cross between tennis, racquetball, and squash. It's currently estimated that Padel has over 100,000 players in the United States, and the number of courts has more than doubled in the last two years, expecting to grow to 30,000 courts by 2030.

Dog Parks

A surge in pet ownership ensued in the wake of the 2020 global pandemic. Larger dog parks have become destination facilities that both residents and visitors seek out and are willing to travel to. Furthermore, according to the Trust for Public Land, the development of dog parks has grown by over 40% in the past 15 years. NRPA data show that 68% of agencies have a dog park and 60% of households own a dog.

Trails

Trails, both within parks and connecting parks, schools, shops, and destinations are generally the top demand seen across the country. Providing trail connections between these popular destinations enhances a community's walkability and encourages active lifestyles.

Playground Trends

There are specific trends that people are seeking in new playgrounds as they are built or updated. These include:

- **Inclusivity:** Providing facilities for individuals of all ability levels to enjoy
- **Eco-Conscious:** Using recycled materials and eco-friendly construction and maintenance
- **Incorporating Adventure & Nature Play:** Using natural playground elements for sensory experiences and a deeper connection with nature
- **Reflecting Unique Community Identity:** Infusing local culture, art, history, and other features to encourage community pride and spirit

Electrification

As electric technology develops, maintenance equipment, vehicles, mowers, and other equipment used in parks and recreation are transitioning from gas powered resources to electric assets. This transition provides long-term cost savings, environmental benefits, and decreased noise. Additionally, parks and trailheads should consider the addition of EV charging stations in parking lots, as the number of EV cars on the road continues to grow. Washington State has led this transition to electric vehicles, with over 18% of new cars sold in the first half of 2023 being fully electric or plug-in hybrids according to the Seattle Times. Vehicle chargers located at park facilities enable drivers to engage with park facilities while waiting for a full charge.

Climate Resiliency

The concept of electrification pertains to growing needs for climate resilience and the ways in which future park implementations can accommodate the increase of hotter days and nights, as well as the increase of storm and wildfire impacts. Parks create a great opportunity to address these goals through smart design and engineering. Parks and open space can mitigate urban heat islands, absorb flood and stormwater, and create fire breaks through green space and linear trail corridors. Climate change, stormwater/flooding implementations, and tree canopy coverage should be considered in future park renovations to increase resiliency.

Youth Sports

Over the past decade, there has been a sharp decline in the number of children and youth playing team sports. Parks and Recreation providers try to balance both organized and unorganized sports and recreation programs across their facilities. The benefits of youth sports are well-documented, providing healthy activities, teamwork skills, and community cohesion.
However, competitive youth sports leagues are becoming increasingly available, charging high fees for participation. Most recreation providers partner with third-party entities to deliver youth sports leagues. 92% of providers offering youth sports opportunities require a registration fee. Municipalities face the challenges of a shortage of volunteer coaches, competition with travel sports leagues, lack of sufficient field/court space, and lack of interest from youth.

Washington State Trends

To meet the requirements of the Land and Water Conservation Fund (LWCF) Act, Washington State develops a statewide comprehensive outdoor recreation plan (SCORP) that includes participation rates in outdoor recreation activities, issues related to future demand, and recommendations for meeting recreation and conservation needs. This plan was reviewed to understand statewide trends and participation data.
These statewide trends are important, given the larger tourist base that recreates in Chelan County.

The top 20 outdoor recreation activities in Washington State are shown in Table 4.1, including participation rates and the number of responses for each activity.

Table 4-1: 2023 Top 20 Outdoor Recreation Activites in Washington State*

Activity	Activity Category	%	N
Walking or Using Mobility Device on Roads or Sidewalks	Trail- and Road-Based Activites	91%	5,390
Walking or Day Hiking or Using Mobility Device on Trails	Trail- and Road-Based Activites	90%	5,331
Wildlife and Nature Viewing	Nature- and Culture-Based Activities	85%	4,812
Scenic Driving (Sightseeing)	Nature- and Culture-Based Activities	85%	4,767
Hanging Out	Leisure Activities in Parks	70%	3,679
Picnic, Barbecue, or Cookout	Leisure Activities in Parks	68%	3,639
Community Garden or Farmers' Market	Leisure Activities in Parks	66%	3,556
Visting Outdoor Cultural or Historical Facility**	Nature- and Culture-Based Activities	62%	3,413
Swimming in Natural Settings	Water-Based Activities	61%	3,374
Paddle Sports (Whitewater, Canoes, Kayaks, Stand-Up Paddle Boards, Rowing)	Water-Based Activities	52%	2,910
Outdoor Concert or Special Event	Leisure Activities in Parks	49%	2,602
Gathering or Collecting Anything in Nature	Nature- and Culture-Based Activities	49%	2,635
Tent Camping (Developed Campground)	Camping Activities	44%	2,510
Backpacking	Trail- and Road-Based Activites	42%	2,349
Playground	Leisure Activities in Parks	41%	2,148
Tent Camping (Undeveloped Area)	Camping Activities	41%	2,247
Road Cycling	Trail- and Road-Based Activites	40%	2,240
Yard Games (Beanbag Toss, Horseshoes, etc.)	Leisure Activities in Parksa	38%	1,966
Volunteering (Restoration Projects, Citizen Science, etc.)	Nature- and Culture-Based Activities	37%	1,984
Jogging or Running on Roads or Sidewalks	Trail- and Road-Based Activites	35%	1,944
Snowshoeing	Snow and Ice Activities	35%	1,821

** By Participation Rate - % of Population, N = Number of Responses*
*** Includes Attending Cultural Events*

Recreation Element Priorities

1. Improved Access to Recreational Areas & Trailheads

One of the predominant concerns voiced by respondents is the need for improved road conditions. Many highlighted the importance of regular maintenance for access roads leading to recreational areas and trailheads. The community seeks better infrastructure to ensure safe and reliable access to outdoor spaces.

2. Wildfire Prevention and Safety Measures

The threat of wildfires emerged as a critical issue impacting health and safety. Survey participants expressed a desire for more proactive fire-wise prevention efforts, including the clearing of ladder fuels and strategic forest thinning to mitigate risks and protect recreational areas.

3. Enhanced Safety and Security

Safety concerns were raised regarding homeless camps, shooting activities, and general security. Respondents called for measures to address these issues, creating a safer environment for individuals engaging in outdoor activities.

4. Improved Access and Infrastructure

Access to rivers, boat ramps, and the creation of a whitewater park were cited as priorities. The community emphasized the need for infrastructure development to facilitate recreational pursuits, including additional trails for off-highway vehicles and motorcycles, as well as improved signage for existing trails.

5. Reduced Barriers and Fees

Frustration with fees, permits, and perceived bureaucratic hurdles was evident in responses. The public demands reduced barriers to access, reasonable fees, and less regulatory interference to make outdoor recreation more accessible to all.

6. Community Engagement and Education

Respondents expressed a desire for increased community engagement, education programs, and awareness initiatives. There is a need for better communication about existing amenities, rules, and regulations to ensure that the public is well-informed and can fully enjoy available resources.

7. Environmental Conservation

Environmental concerns, such as the impact of motorized vehicles on trails and degradation of road and trail conditions, were highlighted. The community calls for improved trail maintenance, signage, and education to preserve the natural surroundings.

8. Diverse Recreational Opportunities

The survey indicates a desire for a diverse range of recreational options. This includes the development of new trails, access for different vehicles, and facilities such as outdoor pools. There is interest in expanding opportunities for activities like dirt biking, skiing, and snowshoeing. These opportunities also need to respond to known local and creational demand trends, e.g., desire for more pickleball courts.

9. Improved Communication

Clear communication about available amenities, guidelines, and rules emerged as a key theme. The community emphasized the importance of effective promotion of recreational opportunities and transparent communication from relevant authorities.

10. Addressing Homelessness Issues

Concerns about homelessness affecting certain areas were raised. Respondents called for measures to address this issue, ensuring that public spaces remain safe and accessible for everyone.

In summary, the public demands a well-maintained, safe, and accessible parks and recreation system that accommodates diverse interests. Addressing infrastructure improvements, safety concerns, community engagement, and environmental conservation are pivotal for meeting these demands.

Goals & Objectives

Introduction & Purpose

"Chelan County provides a mix of parks, recreation, and open space that complements community character, creates diverse opportunities for residents and visitors, and preserves ecological functions."

The goals and policies have undergone revisions based on valuable input gathered during the two public workshops, ensuring that the comprehensive plan aligns with the public's suggestions and reflects the most current thoughts on parks and recreation facilities and services. Recognizing the significant impact of the tourist industry on various areas of Chelan County, the importance of recreational opportunities and the region's natural beauty is underscored, benefiting both residents and visitors.

Open space is acknowledged as a crucial element in the natural environment, supporting diverse systems and contributing to aesthetic, recreational, and economic resources within the rural landscape. Chelan County's open space includes minimally developed land, encompassing critical areas, parks, wildlife corridors, historic sites, resource lands, and conservation areas. Identifying and mapping specific sites within this open space system will be an ongoing process, responding to public interest and the need to preserve the integrity of overall open space corridors.

Community safety assumes a paramount role in the urban, wildland-urban interface, and natural undeveloped areas within community recreation planning. The plan recognizes the growing prominence of outdoor recreation and integrates natural ecosystems into development strategies. The heightened awareness of natural hazards, particularly wildfires, is emphasized in the early planning stages. Acknowledging wildfire as a significant natural hazard in Chelan County, the plan advocates for resilient recreation planning strategies that consider the role of fire in the local landscape, aiming to reduce community risks associated with wildfires.

The following list of goals and associated policies should guide recreation and parks management and future development.

Revised Goals & Objectives Based on Survey Results

Goal 1

Enhance Open Space and Public Land Use for Community Enjoyment.

OBJECTIVES:

- 1.1:Implement innovative techniques (e.g., public benefit rating, open space tax) to preserve open space while respecting private ownership rights.
- 1.2: Promote compatible multiple uses of public lands supporting open space and recreation.
- 1.3: Foster access to public lands, coordinating with private landowners, while respecting property rights.
- 1.4: Identify areas prone to natural hazards, including wildfire, for possible acquisition to act as buffers and recreational spaces.
- 1.5: Map open space corridors, emphasizing recreation, wildlife habitat, and critical connections.
- 1.6: Review open space corridors for acquisition opportunities through donation or purchase.

Goal 2

Develop and Maintain Recreational Facilities to Meet Community Needs.

OBJECTIVES:

- 2.1: Evaluate new park facilities using the Recreation and Conservation Funding Board format, addressing diverse recreational needs.
- 2.2: Design parks for year-round operation, supporting four-season recreation and cultural events.
- 2.3: Encourage public access to shorelines while protecting critical areas and property rights.
- 2.4: Establish coordinated park planning between Chelan County and public/private entities for effective land use.
- 2.5: Ensure publicly owned tourist/recreation destinations provide sanitary facilities with maintenance plans.
- 2.6: Provide a range of open space and recreation facilities for diverse age, social, and economic groups.
- 2.7: Facilitate environmental and natural hazard education in parks and recreation development.

Goal 3

Consider Impacts on Surrounding Areas and Preserve Natural Features.

OBJECTIVES

- 3.1: Ensure compatibility with adjacent land uses and infrastructure adequacy in developing recreational facilities.
- 3.2: Preserve environmentally sensitive or culturally valuable areas in park and recreation development.
- 3.3: Design facilities to capitalize on natural features, environmentally sensitive areas, and historic/cultural resources.
- 3.4: Prioritize aesthetic quality in the design and development of recreational opportunities and facilities.
- 3.5 : Incorporate natural hazard mitigation in the design and location of parks and recreation facilities.
- 3.6: Employ ecosystem-based fire management practices where appropriate.

Goal 4

Improve Recreation Service Efficiency through Coordination.

OBJECTIVES

- 4.1: Support various park and recreation plans from different entities, fostering collaboration and input.
- 4.2: Encourage ongoing public input in recreational plans and coordinate with other agencies.
- 4.3: Collaborate with public and private entities to gauge recreation demand and needed facilities.

Goal 5

Foster Active Communities Through Park and Trail Development.

OBJECTIVES

- 5.1: Strive for access to parks, open space, trails, and/or other recreation resources with a 10-min walk of Chelan County populated areas.
- 5.2: Provide for safe and convenient active transportation routes for all to enjoy recreation and open space resources.

Goal 6

Provide and Maintain Public Facilities and Services.

OBJECTIVES

- 6.1: Implement a maintenance plan for the ongoing upkeep of public parks and recreation facilities.
- 6.2: Support the expansion of facilities to meet community needs.
- 6.3: Uphold adopted levels of service standards in cities, urban growth areas, and established park districts.
- 6.4: Ensure sustainable funding for operations & maintenance of parks and recreation resources.

Noted Differences from the Previous Recreation Element

The revised set of goals and objectives demonstrates a nuanced and refined approach, integrating valuable insights from the survey results. The key differentiators include a heightened emphasis on the impact of wildfire and natural hazards on recreational planning, highlighting the need for resilience strategies. The global COVID-19 pandemic also created another notable shift in overall awareness of open spaces, outdoor recreation and trails as highly important resources, both as economic drivers of tourism and quality of life for residents. This has led to a significant increase in use of these open space and recreation resources. There is a strengthened commitment to public input and collaboration, fostering partnerships with entities such as recreation districts, municipalities, public service entities such as the utility district, port and transit authorities, and various community initiatives.

Environmental education and natural hazard mitigation take center stage, with an explicit call for ecosystem-based fire management practices. The goals underscore the importance of providing diverse and inclusive recreation options, catering to various age, social, and economic groups. Considerations for seasonal and year-round facilities are introduced, promoting four-season recreation and cultural events.

Enhanced coordination efforts extend to collaborating with different agencies and implementing coordinated park planning processes to maximize the use of publicly-owned land.
Stewardship and preservation receive heightened attention, focusing on mitigating impacts on surrounding land uses and emphasizing the utilization of natural features, environmentally sensitive areas, and historic and cultural resources.

In summary, these refinements reflect a comprehensive and community-centric approach, addressing specific concerns raised by the public and aligning the goals with the nuanced preferences and priorities outlined in the survey responses.

Capital Improvement Program

Introduction & Purpose

The Parks, Recreation, Open Space, and Trails Plan for Chelan County serves as a foundational framework, significantly influencing the residents' quality of life through the county's Parks & Recreation system. The management of these services, overseen by the county's administrative staff within the department, requires a strategic allocation of resources from both the county's and relevant districts' budgets. These ongoing investments in staff, equipment, and supplies play a pivotal role in offering and sustaining a diverse range of outdoor recreation opportunities, prioritizing safety, and meeting public expectations.

Aligned with Chelan County's strategic objectives and integrated into the Comprehensive Plan's guiding principles, this plan underscores the commitment to fostering a safe, healthy, and accessible community, promoting cultural appreciation, and preserving the environment. It encapsulates the aspirations and desired quality of life for Chelan County residents.

This section reaffirms the county's dedication to addressing public feedback and rectifying system deficiencies by outlining a comprehensive Capital Improvement Program (CIP). Encompassing specific projects and overarching recommendations, the CIP aims to bridge service gaps. These proposals, presented in tabular and detailed formats, outline planned enhancements and conceptual improvements slated for implementation over the next six years. Additionally, the incorporation of long-term aspirational projects reflects a proactive stance, ready to embrace opportunistic improvements contingent upon market conditions or funding viability.

At the core of this plan are key recommendations meticulously crafted to efficiently address current issues, anticipate future demands, maximize funding flexibility, and align with public preferences. It takes into account the full spectrum of available parks and recreation amenities within Chelan County.

On-Going Priorities & Capital Projects

Parks and recreation play a major role in Chelan County. Implementing this plan will take time, money and dedication, but the results will be a stronger parks and recreation system and continued support and growth of that system. Leadership is a vital aspect of cohesively implementing a parks and recreation plan.

Chelan County is the best entity to fill this leadership role. The parks and recreation plan identifies three key areas for leadership, including:

- coordinating the process at the regional scale,
- creating connectivity with existing opportunities,
- developing partnerships with other agencies and non-governmental organizations

Focusing in on these key areas will facilitate the process for implementing the following projects and processes.

One theme that has become apparent during both planning processes was the intention to collaborate to achieve common recreation goals. This theme has taken shape in two different contexts:

1. a desire to see greater collaboration between agencies and local government, and
2. an increase in organized recreation advocacy groups such as the Complete the Loop Coalition, a local volunteer group that advocates funding and developing public trails in the Wenatchee Valley.

This new focus marks a shift in community involvement around recreation development and opens pathways for collaboration between the public and the agencies. Continued confusion about who does what was still a common talking point with the public with an apparent lack of coordination between agencies. The public sees a major gap in the type of collaboration needed to allow for trail connectivity, which is a high priority for recreation development in Chelan County. This plan reinforces that Chelan County is the best suited to lead the effort to coordinate the implementation of recreation plan goals at a regional scale and develop partnerships to further cooperation and create connectivity with existing opportunities.

Organized recreation advocacy groups, such as the Lake Chelan Trails Alliance, Central Washington Evergreen Mountain Bike Alliance, and TREAD are gaining momentum by engaging agencies and other stakeholders to promote recreation development in the open spaces of Chelan County. Many of these efforts have been met with measurable success, such as the agreement between Evergreen Mountain Bike Alliance and the US Forest Service to implement development of a series of mountain bike trails in the vicinity of the Leavenworth Ski Hill. Wenatchee Valley Trails Alliance (TREAD) has been an extremely active advocate for enlistign partners, identifying projects, and planning for trail development and connectivity. These groups are increasingly important driver in recreation development in Chelan County, and will be key players in implementing some of the recreation concepts discussed at the community workshops. They will also hold agencies and local governments accountable for collaboration when the rubber hits the road. As the County currently does not have a Parks and Recreation Department, but with a population very interested in recreation, these advocacy groups play a major role in recreation planning and development. This role should be recognized and appreciated by the County and other land management agencies, and the focus on collaboration that was highlighted at the community meetings will be crucial to successful recreation planning and implementation in Chelan County.

Parks and Recreation Projects Identified In the Previous Plan

During the previous plans' public and stakeholder workshops, participants highlighted various parks and recreation project ideas to address community needs and demands. In many instances, these initiatives were designed to enhance or expand access to existing recreational facilities. Notably, the majority of the proposed projects were focused on developing trails.

The primary objective of the previous plan was to unite Chelan County's parks and recreation landscape. The County's role is centered on facilitating recreation by supporting the parks and recreation initiatives led by cities and other agencies responsible for these services. The projects outlined in the previous plan reflect this role, particularly emphasizing the importance of trails that connect different parks and recreation facilities. Additionally, the plan underscores the necessity of providing planning and feasibility services to determine suitable project locations.

Identified in the previous plan, several concepts, frameworks, and projects are still valid and can aid the County in its facilitation role. Examples include:

- **Create a Formal County Parks and Recreation Structure and Staffing**
- **Comprehensive County Pathways Plan (On-Going)**
- **Shoreline Public Access Plan**
- **Number 2 Canyon**
  - Expand and improve existing trails for hikers, bikers and equestrians on US Forest Service land in the Horse Lake Mountain area, west of Wenatchee's Number 2 Canyon. Potential for an additional 30+ miles of trails, road improvements, and trailhead facilities are currently being assessed.
- **Lakeside Trail**
  - Phases of this Chelan area trail are under construction with additional funding for development needed. This trail, when completed, will extend from Lakeside Park, along the southern shore of Lake Chelan, through downtown and up the north shore to the City limits.
- **Upper Columbia River Water Trail**
  - Add a series of access points and campsites facilitating one-day to multi-day trips on the river.
- **Lake Chelan Water Trail**
  - Add a series of access points and campsites facilitating one-day to multi-day trips on the lake.
- **Wenatchee Valley Scenic Bikeway**
  - Nicknamed "The Fruit Loop," this is an effort to officially designate a bike route through the Wenatchee Valley from the Columbia River to Leavenworth.
- **New Trail Connectors**
  - Squilchuck to Number Two Canyon trail connector, and Number Two Canyon to Maiden Lane trail connector (also in the City of Wenatchee Comprehensive Plan).
- **Wenatchee River Water Trail**
  - Add a series of access points and day-use sites facilitate one- day trips on the river.
- Ski Hill Loop Trails
  - Add the trails created by a partnership between the USFS and EMBA to establish additional riding opportunities in the Leavenworth area.
- **Nordic Ski Trails**
  - Add a winter non-motorized recreation area in Stemilt Basin, and groomed Nordic trails at Mission Ridge.
- **Riverside Trail**
  - Link the Peshastin Mill site (possible Peshaston Community Park site) to the town of Leavenworth via an abandoned railroad grade. The railroad property is privately owned, but some owners have expressed a willingness to provide easement.
- **Leavenworth National Fish Hatchery**
  - Support the development of the Salmon Lifecycle Landscape project,
- **Rattlesnake Hill Park**
  - Potential new bike/hike natural area with separate hiking/ mountain biking trails and lookout/viewpoint on summit
- **Washington Department of Fish and Wildlife (WDFW) River Access**
  - Access improvements at Drunkards Drop, Rodeo Hole, and Turkey Shoot rapids
- **Dryden WA Dept. of Transportation Property**
  - Potential park, river access and whitewater play feature.
- **Other project identified for consideration in the previous plan:**
  - Feasibility study for a whitewater park.
  - Expansion of Wenatchee Row and Paddle Club boathouse facilities on the Columbia River at Ninth Street in Wenatchee
  - Additional sports playing fields in Cashmere
  - Outdoor splash park in Cashmere
  - Pedestrian bridge parallel to Icicle Bridge on Icicle Road
  - Better public access/launch for boaters and tubers on the Icicle/Wenatchee in Leavenworth, with parking, restrooms, bank stabilization
  - Designated foot/horse traffic (non-mountain bike) trail at Leavenworth Ski Hill
  - Bike path along Chumstick Highway, from Leavenworth to Plain
  - Year-round swimming pool and recreation center in Leavenworth
  - Ice Rink in Leavenworth
  - Year-round soccer field complex in Leavenworth
  - Downtown Leavenworth to Leavenworth National Fish Hatchery non-motorized trail or enhanced pedestrian shoulder on Icicle Road or East Leavenworth
  - Leavenworth to Plain non-motorized trail for biking, running, XC skiing
  - Signage/parking for climbing access in the Icicle Canyon
  - Continued expansion of mountain biking trails in Chelan County
  - Indoor climbing gym in Leavenworth
  - Outdoor splash park in Leavenworth

- Safe bike travel paths on Hwy. 2 bridges between Wenatchee and Leavenworth

Other recreation planning efforts proposed and/or already occurring around Chelan County include the following:

- Stemilt-Squilchuck Recreation Plan
- The Partnership and the County, with the assistance of state and private funds, were able to acquire an additional 4,000 acres of private timberland in the basin for public management in 2014. This acquisition further demonstrated the region's dedication to preserve water and wildlife. The County is currently working with the Partnership, public agencies, recreation community, and other stakeholders to address recreation which is the third pillar of the Vision Document. The goal is to create a recreation plan that will help identify and create a sustainable and diverse recreation strategy for the area.
- Wenatchee Foothills Trail Plan
- Malaga Community Park Improvements
- New 2.5 acre park on the Malaga Alcoa Highway.
- Disc Golf Course
- Manson Bay Waterfront Revitalization Project
- Singleton Park Drainage
- Willow Point Park
- Number 2 Canyon Road Parking & Trailhead Improvements
- Human-Powered Paddle Sports Access Point on the Columbia River
- Designated Countywide Bicycle Routes
- Expand the Upper Valley Trails Plan model to a County-wide Bike Tourism Plan.
- Upper Wenatchee Community Lands Exchange
- Lake Chelan "20 Trails" Network

Developing the Capital Improvement Program

The plan is designed for a full six-year lifespan with the intent that it will guide improvements from 2024 through 2030 while providing a conceptual vision of additional aspirational improvements beyond that are focused on the projected growth of Chelan County. This plan is not a strict "script" to guide any and all park & recreation improvements, since the County's role has primarily been as a facilitor of other orgranization's efforts. Since funding may be diverted or not secured or public needs or political will may change, this plan is designed to be a fluid and dynamic strategic guide for the County to base decisions around. Unforeseen opportunities may present themselves that are not covered in this plan, which may create better service to the public.

The capital improvement projects listed are not, nor will they be officially prioritized over the next six years, although specific recommendations at the beginning of this section have initially placed the projects in a series of "tiers", which infers which projects are more likely to occur or already have advocates. For planning purposes, the timeline of implementation has been estimated but may be impacted by a multitude of factors, including likely design and permitting time, other critical public work projects, grant funding cycles and available budgets, and finally, County staff project management capacity. Note that this is for planning purposes only and is not a commitment to implementation in a particular year. This plan should be a living document, constantly updated as conditions change.

- **Tier 1 - Active:** Already Underway or Currently in Planning
- **Tier 2 - On Deck:** Possible Partner Project Awaiting Further Detail or Funding
- **Tier 3 - Aspirational:** Beyond 2030

To reinforce this intention, the CIP project list is meant to address the demand and needs captured by the public survey and community workshops, and have been vetted with both County staff, Planning Commission members, and County Council. Actual implementation over the next six years will be driven by available funding, the County's success in securing grant funding or other project partners, as well as critical liability maintenance and repair improvements.

Opinion Of Probable Costs

Included in this section is an opinion of the range of probable implementation costs associated with the improvements recommended for each potential project or proposed initiative. Note that these opinions are purposely left in a range reflecting the complexity of the project and are subject to change due to site conditions, final design, and market circumstances.

Inflation, annual cost escalators, cost & design contingencies, permitting and other soft costs are not detailed, neither is the cost for staff time is not included in the cost opinions.

Cost Category:

- **s:** $0-$250,000
- **ss:** $250,000 - $750K
- **sss:** $750,000+

Updated Project & Program Improvements

The results from the public workshops and survey provide comprehensive insights into the community's perspectives and preferences regarding Chelan County's parks and recreation system. Project recommendations from participants include and are organized by the demand & need prioritized theme:

Table 6-1: Capital Improvement Projects & Initiatives					
Project Name	**Project Type**	**Facility Type**	**Cost Category**	**Tier**	**Funding Potential**
Increased Open Space, Access Points & Trailheads					
Add Low elevation trails in the Upper Valley (Leavenworth area) to take pressure off the parking at Sauer mtn	Development	TB, TP, ORV	$$	I	County, EMBA, USFS, Local
Develop formal trailhead and sanctioned trail system for Sauer Mountain	Planning/ Feasibility, Development	TB, TP, ORV	$$$	II	County, EMBA, USFS, Local
Develop more accessible (flat) trails throughout the valley	Planning/ Feasibility, Development	TB, TP, EQ, WF	$$$	I	County, EMBA, USFS, Local
More trails and/or trailheads to access sage-brush steppe habitat (especially in the Wenatchee foothills to Cashmere area).	Planning/ Feasibility, Development	TP, TB	$$$	II	County, RCO, EMBA, USFS, Local
Add formal trailhead in Burch Mtn Rd. area	Development	TP, TB	$$	III	County, RCO, EMBA, Local
Establish formal trailhead at South end of Sage Hills trail system to resolve overcrowding and neighbor/use conflicts at Day Drive and 5th Street access points	Planning/ Feasibility, Development	TP, TB	$$	II	County, RCO, EMBA, Local
Formal trailhead at lower Horse Lake Road area	Development	TP, TB, EQ	$	I	County, RCO, Local
Develop formal and managed access points and trails at heavily used informal sites. Implementation of access points should be guided by 2022 CCPW Recreation Access Site Assessment & Need study.	Development	TP, TB, EQ, ORV, OS	$$	I	Local, RCO
Formal trailhead serving multiple trails in Derby Canyon area	Planning/ Feasibility, Development	TP, TB	$$	II	County, RCO, EMBA, Local
Formal trailhead and trail system in the Hay Canyon dispersed recreation area at the interface of Chelan County and Forest Service jurisdictions	Planning/ Feasibility, Development	TP, TB, EQ, ORV, OS	$$$	III	County, RCO, EMBA, USFS, Local
Formal trailhead with amenities developed in Freund Canyon area.	Planning/ Feasibility, Development	TP, TB, EQ	$$	II	County, RCO, EMBA, USFS, Local
Increase parking & other amenities at existing formal access points & trailheads	Planning/ Feasibility, Development	TP, TB, EQ	$$$	I	County, RCO, EMBA, USFS, Local
Formal trailhead in Mountain Home Road area at interface of private, Chelan County, and Forest Service jurisdictions	Planning/ Feasibility, Development	TP, TB, EQ, OS	$$	I	County, RCO, EMBA, USFS, Local

Table 6-1: Capital Improvement Projects & Initiatives					
Project Name	**Project Type**	**Facility Type**	**Cost Category**	**Tier**	**Funding Potential**
Increased parking & amenities at Icicle Ridge trailhead	Development	TP, TB, EQ, OS	$$		County, RCO, EMBA, USFS, Local
Increased parking at Snow Lakes trailhead	Development	TP, TB, EQ, OS	$$		County, RCO, EMBA, USFS, Local
Facilitate representative planning teams to explore and develop trailheads and access points in underserved communities.	Planning/Feasibility	AM	$	1	County, EMBA, TREAD, USFS, CDLT, TPL
Shuttle service to high-use trailheads to reduce parking congestion and safety concerns for roadway overflow parking.	Development	TP, TB, AM	$$	1	County, USFS
Increase designated active transportation routes to access trailheads.	Development	TP, TB, AM	$$	1	County, USFS, Local
Acquisition and Development of Plain Community Park	Development	OS	$$	I	Local, County
Manson Water Access Micro Parks	Development	WF, OS	$$	I	Local, County, RCO
Malaga Community Park	Planning/ Development	OS, B, PT	$$$	I	Local, County, RCO
Malaga Waterfront Park	Planning/ Development	OS, WF, BB, PT	$$$	I	Local, County, RCO
Increased Access to River Recreation					
More put-in / takeout sites along the Wen River. Guided by 2023 River Recreation Management Plan for the Wenatchee River & Icicle Creek Near Leavenworth and 2022 CCPW Recreation Access Site Assessment & Need study.	Planning/ Feasibility, Development	B, WF	$$	1	Local, County, WDFW, RCO
COIC Bridge site access to Wenatchee River	Development	B, WF	$$	II	Local, County, WDFW, RCO
Beaver Valley Road access to Wenatchee River	Development	B, WF	$$	II	Local, County, WDFW, RCO
Sleepy Hollow Bridge site access to Wenatchee River	Development	B, WF	$$	III	Local, County, WDFW, RCO, WSDOT
Ensure new or enhanced access points include human-powered watercraft launches, including tubing where demand exists.	Planning/ Feasibility, Development	B, WF, AM	$	I	Local, County, WDFW, RCO, WSDOT
Facilitate partnerships for management of existing designated public water access sites.	Infrastructure	TP	$	I	Local, County, WDFW, RCO, WSDOT
Develop whitewater park on Wenatchee River, informed by CCNRD Wenatchee River Whitewater Park Feasibility Study	Development	BB	$$$	II	Local, County, WDFW, RCO, WSDOT
Develop the Peshastin Community Park (if feasible)	Planning/Feasibility	NPK, TP, P, OS	$$	1	Local, County, WDFW, RCO, WSDOT
Upper Columbia Water Trail	Planning/Feasibility	WF, SB, SO	$$$	III	Local, County, WDFW, RCO, WSDOT
Lake Chelan Water Trail	Planning/Feasibility	WF, SB, SO	$$	II	Local, County, WDFW, RCO, WSDOT

Multi-modal Pathways Connecting Communities					
Implement Chelan County Pathways planning process	Planning/ Feasibility,	TP, TB, EQ, ORV, OS	$	I	Local, County, RCO, WSDOT
Develop additional ADA accessible trails throughout the Wenatchee Valley	Planning/ Feasibility, Development	TP, TB, EQ, ORV, OS	$$$	II	Local, County, RCO, WSDOT

Table 6-1: Capital Improvement Projects & Initiatives					
Project Name	**Project Type**	**Facility Type**	**Cost Category**	**Tier**	**Funding Potential**
Develop a comprehensive inventory of all trails and conditions	Trail/Path	TP, TB, FO, ORV, OS	$$	I	Local, County, RCO, WSDOT
Increased Access to Lake Chelan					
Waterfront Park Improvements: Willow Point Park, Old Swim Hole, Manson Bay Park, Manson Bay Marina, Wapto Lake Campground and Boat Launch	Planning/ Feasibility, Development	B, WF, SB, SO	$$	I	Local, County, RCO, WSDOT
Develop Lakeside Trail	Development	TP, TB	$$$	II	Local, County, RCO, WSDOT
Develop Northshore Trail	Planning/ Feasibility, Development	TP, TB	$$$	III	Local, County, RCO, WSDOT
Singleton Park and Old Mill Park Improvements	Develop-ment	B, SB, SO	$$	I	Local, County, RCO, PUD
Improved Communications & Knowledge					
Updated signage for road routes, wayfinding, ownership, and rules.	Planning/ Feasibility, Development	AM	$$	II	Local, County, RCO, WSDOT
Develop real-time status updates for trails and recreation.	Planning/ Feasibility, Development	AM	$$	I	Local, County, RCO, WSDOT
Desire for clear demarcation of public and private lands, especially on trails	Planning/ Feasibility, Development	AM	$$	II	Local, County, RCO, WSDOT
Safety Improvements					
Suggestions for more reflectors on recreational roads and bridge improvements for pedestrian safety	Planning/ Feasibility, Development	AM	$	I	Local, County, WSDOT
Add video monitoring at select trailheads with motion-sensing	Planning/ Feasibility, Development	AM	$	I	Local, County, WSDOT USFS
Improve parking capacity and/or transit/shuttle stops at key trailheads	Planning/ Feasibility, Development	AM	$	I	Local, County, WSDOT USFS
Economic Development					
Concentrate recreation resources near visitor accommodations to boost the local economy.	Planning/Feasibility	AM	$$	I	Local, County, WSDOT USFS

Table 6-1: Capital Improvement Projects & Initiatives					
Project Name	**Project Type**	**Facility Type**	**Cost Category**	**Tier**	**Funding Potential**
Improved ORV / ATV Access & Dedicated Trails					
Open County Roads between Trailheads & ORV Trails	Planning/ Feasibility, Development	TB, TP, ORV	$	1	Local, County, USFS
Motorized Trail Plan Implementation Feasibility	Planning/Feasibility	AM	$	I	County
Improved ORV / ATV Access & Dedicate Trails	Planning/ Feasibility, Development	TB, TP, ORV	$$$	II	Local, County, USFS
Mills Canyon ORV Trail (Beginner & Intermediate) - Could include MB	Development	TB, TP, ORV	$$	II	Local, County, USFS
Grade Creek Loop and Lake Chelan Motorized Routes	Development	TB, TP, ORV	$$	II	Local, County, USFS
Reopen old FS roads for ORVs	Development	TB, TP, ORV	$$	!	Local, County, USFS
Organizational Recommendations					
Identify the oversight agency and the need for better coordination between state and local governments.	Planning/Feasibility	AM	$	I	Local, County, WDFW, RCO, WSDOT

The ongoing planning and implementation initiatives previously discussed in this plan should be formally acknowledged as part of the Capital Improvement Projects, making them eligible for sustained financial support. A significant number of the planning efforts outlined in this plan update are fundamental in establishing the necessary framework for bringing to fruition several of the community- driven concepts. It is imperative to recognize and allocate continued financial resources to these ongoing endeavors to ensure their seamless integration and to provide the structural foundation required for the successful implementation of the community's proposed projects. The CIP lists the funding options and project as categorized using the data in Table 6-2.

Table 6-2: CIP Funding Options and Projects		
Key	**Funding Sources**	**Project Categories**
L	Local Funds	Trail / Path
B	General Obligation Bonds	
U	Unknown	
D	Donation	Infrastructure
R	Revenue Bonds	
M	Matching Grant	
O	Other Bonds	Planning / Feasibility
RCO	Recreation and Conservation Office, which encompasses the following programs: ◆ LWCF- Land and Water Conservation Fund ◆ WWRP- Washington Wildlife and Recreation Program ◆ RCFB – Recreation and Conservation Funding Board ◆ WSPC – WA State Parks Commission	

The CIP also includes all facility types that apply for each project with the primary use listed first. Facility types specify what funding can be considered and include:

Table 6-3: CIP Facility Types			
Facility Type	**Symbol**	**Facility Type**	**Symbol**
Aquarium	A	Open Space, Greenway	OS
Administration, Maintenance	AM	ORV Facility, Trail	ORV
Boating Facilities	B	Picnic, Day Use	P
Basketball, Other Courts	BB	Play Equipment	PE
Botanical Garden	BG	Open Play Field	PF
Baseball, Softball Fields	BS	Swimming Beach	SB
Camping Facility	C	Swimming, Indoor Pool	SI
Community, Senior Center	CC	Swimming, Outdoor	SO
Equestrian Facility/Trail	EQ	Tennis Court	T
Fishing Area	F	Trail, Bicycle	TB
Football/Soccer Fields	FS	Trail, Pedestrian	TP
Golf Course	G	Winter Sports Facility	W
Interpretive/Nature Study	I	Waterfront/Beach Access	WF
Neighborhood Park	NPK	Zoo	Z

Plan Adoption

Adoption

In order for this plan to be formally adopted, the plan must be reviewed by several bodies, including the public, ultimately culminating with a resolution, ordinance, or other adoption instrument showing formal approval of the plan and planning process by the governing entity. Only after RCO approves the plan, may the organization may apply for grants for up to six calendar years from the date when the governing body adopted the plan.

With the depth of public and staff involvement made over the execution of this planning process, the following review and approvals have been included:

1. County Council Ordinance
2. RCO Self-Certification Checklist
3. Non-Project SEPA Review (See Appendix D)

SPACE FOR RESOLUTION

SPACE FOR RESOLUTION

Planning Eligibility Self-Certification Form

Use this form to certify that the need for any grant projects have been developed through an appropriate planning process. Provide the completed form with the subject plans and adoption documentation to RCO via e-mail or other means of electronic access (i.e. Web link, Box.com, etc.).

Organization Name: Chelan County

Contact Name: Mike Kaputa, Director

Adoption Date of Submitted Documents:

Seeking Eligibility for: ☐ Recreation Grants ☐ Conservation Grants ☒ Both

Initial Each to Certify Completion	Plan Element Certification	Document and Page Number Location of Information
	1. Goals, objectives: The attached plan supports our project with broad statements of intent (goals) *and* measures that describe when these intents will be attained (objectives). Goals may include a higher level of service.	64
	2. Inventory: The plan includes a description of the service area's facilities, lands, programs, and their condition. *(This may be done in a quantitative format or in a qualitative/narrative format.)*	18
	3. Public involvement*:* The planning process gave the public ample opportunity to be involved in plan development and adoption.	45
	4a. Demand and need analysis: In the plans: • An analysis defines priorities, as appropriate, for acquisition, development, preservation, enhancement, management, etc., and explains why these actions are needed. • The process used in developing the analysis assessed community desires for parks, recreation, open space, and/or habitat, as appropriate, in a manner appropriate for the service area (personal observation, informal talks, formal survey(s), workshops, etc.).	59
	4b. Level of Service assessment (optional): An assessment of the criterion appropriate to your community. Possibly establish a higher level of service as a plan goal (above).	59
	5. Capital Improvement Program: The plan includes a capital improvement/facility program that lists land acquisition, development, and renovation projects by year of anticipated implementation; include funding source. The program includes any capital project submitted to the Recreation and Conservation Funding Board for funding.	65
	6. Adoption: The plan and process has received formal governing body approval *(that is, city/county department head, district ranger, regional manager/supervisor, etc., as appropriate).* Attach signed resolution, letter, or other adoption instrument.	75

Chelan County Recreation Element Update

April 2024

A - Terms & Definitions

Washington State Recreation & Conservation Office (RCO) has found that many terms commonly used in recreation planning do not have consistent definitions from one plan to another. RCO suggests, but does not require, the following definitions compiled from various sources, including Washington Administrative Code, Department of Natural Resources, and Washington State Parks & Recreation Commission used in this master parks plan include:

Table A1: Terms & Definitions	
Term	**Definition#**
Access	The public's ability to physically use land or water.
Active Recreation	Predominately human muscle powered recreational activities.
Camping	An overnight stay in a tent or other non-permanent structure.
Capital Improvement Program (CIP)	A list or description of proposal capital projects.
Capital Project	A project that results in redevelopment of an existing property, acquisition of new property, or a new built facility with a budget that excess $10,000.00
Consumptive	Recreation that physically consumes resources; examples include berry picking, shellfish harvest, hunting, fishing.
Development	A development project is construction or work resulting in new elements, including but not limited to structures, facilities, and/or materials to enhance outdoor recreation resources.
Dispersed	Recreation that is scattered or spread across the landscape and not concentrated at a specific site. Examples include trail uses, camping, walking, cycling, and jogging.
Impact (Low, Medium, High)	The effect that recreational uses have on resources including but not limited to soils, water, species, habitat, sites, and facilities.

Table A1: Terms & Definitions	
Term	**Definition#**
Improve	Expanding an existing site or facility to serve more uses or more types of use.
Level of Service	Measure of the current status of a park and recreation system as a whole based on either quantitative or qualitative characteristics.
Maintain	To maintain existing areas and facilities through repairs and upkeep for the benefit of outdoor recreationists.
Multiple-use	Use by more than one type of recreation on the same facility.
Non-consumptive	Resource recreation that depends on, but does not consume, resources; for example, photographing wildlife.
Park	Land or an area set aside for a special purpose, but particularly for leisure or recreation. • **Totlot/Mini-Park/Pocket Park** – a small local park or civic space accessible to the general public without the capacity for large outdoor recreation activities like field sports and often associated with playground equipment for toddlers and young children. • **Neighborhood Park** – a local-scale park with a service area of a reasonable walking distance, typically ½ mile, but up to 1 mile. • **Community Park** – a community-scale park facility has a service area typically of 1-5 miles that includes the city limits of a town or city. • **Regional Park** – a larger park facility intended to serve populations and uses from multiple jurisdictions. • **State Park** – a park facility owned and managed by the State of Washington. • **Marine Park** – a state or regional park facility intended to serve populations spanning multiple jurisdictions with primary access via watercraft . • **Day-use Park** – any kind of park facility that does not allow overnight uses such as camping. • **Seasonal Parks** – any kind of parks intended for use in specific seasons.
Passive	Activities usually conducted in place and requiring minimal physical exertion such as picnicking, watching a sports event, sun bathing, or relaxing.
Qualitative	An adjective relating to the quality of something interpreted by its intrinsic non-numerical characteristics other than some quantity or measured value.
Quantitative	Relating to, measuring, or measured by the quantity of something obtained using a numerical measurement process.
Recreation	Activities of a voluntary and leisure time Nature that aid in promoting entertainment, pleasure, play, relaxation, or instruction.
Renovate (Renovation)	The activities intended to improve an existing site or structure in order to increase its useful service life beyond original expectations or functions. This does not include maintenance activities to maintain the facility for its originally expected useful life.
Restoration	Bringing a site back to its historic function as part of a natural ecosystem or improving the ecological functionality of a site.
Shared Use	Use by more than one type of recreation on the same facility.
Trail	According to the Washington State Trails Plan (RCO, 2013): *"…a path, route, way, right-of-way, or corridor posted, signed, or designated as open for travel or passage by the general public but not normally designated as open for the transportation of commercial goods or services by motorized vehicles."* A trail is a recreational facility that also can serve as a non-motorized route for transportation.

B - Standards & Guidelines

There are six basic park and greenspace facility types typically utilized by municipalities:

- Pocket Parks / Mini-Parks / Tot Lots
- Neighborhood Parks
- Community Parks
- Natural Areas & Greenspaces
- Trails, Bikeways & Paths
- Special Facilities

POCKET PARKS / MINI-PARKS / TOT LOTS

Pocket parks are very small and serve a limited radius (up to ¼-mile) from the site; they provide passive and play-oriented recreational opportunities. Examples of pocket parks can include a tot lot with play equipment such as a climber, slide or swings; a viewpoint; or waterfront access areas such as at street ends.

A small urban plaza or civic recognition project may also be considered a pocket park. Parking is not often provided at pocket parks, although lighting may be used for security and safety.

NEIGHBORHOOD PARKS

Neighborhood parks are generally considered the basic unit of traditional park systems. They are small park areas designed for unstructured play and limited active and passive recreation. They are generally 3-5 acres in size, depending on a variety of factors including neighborhood need, physical location and opportunity, and should meet a minimum size of 2 acre in size when possible.

Neighborhood parks are intended to serve residential areas within short walking distance (up to ½-mile radius) of the park and should be geographically distributed throughout the community. Access is mostly pedestrian, and park sites should be located so that persons living within the service area will not have to cross a major arterial street or other significant natural or man-made barrier, such as ravines and railroad tracks, to get to the site.

Additionally, these parks should be located along road frontages to improve visual access and community awareness of the sites.

Generally, developed neighborhood parks typically include amenities such as pedestrian paths, picnic tables, benches, play equipment, a multi-use open field for youth soccer and baseball, sport courts or multi-purpose paved areas, landscaping and irrigation.
Restrooms are not provided due to high construction and maintenance costs. Parking is also not usually provided; however, on-street, ADA accessible parking stall(s) may be included.

Neighborhood park development may proceed in phases.

COMMUNITY PARKS

Community parks are larger sites developed for organized play, contain a wider array of facilities and, as a result, appeal to a more diverse group of users. Community parks are generally 20 to 50 acres in size, meet a minimum size of 20 acres when possible and serve residents within a 1-mile radius of the site.

In areas without neighborhood parks, community parks can also serve as local neighborhood parks. In general, community park facilities are designed for organized or intensive recreational activities and sports, although passive components such as pathways, picnic areas and natural areas are highly encouraged and complementary to active use facilities.

Since community parks serve a larger area and offer more facilities than neighborhood parks, parking and restroom facilities are provided. Community parks may also incorporate community facilities, such as community centers, senior centers or aquatic facilities.

NATURAL AREAS & GREENSPACES

NATURAL AREAS

Natural areas are those which are preserved to maintain the natural character of the site and are managed to protect valuable ecological systems, such as riparian corridors and wetlands, and to preserve native habitat and biodiversity. In managing for their ecological value, these natural areas may contain a diversity of native vegetation that provides fish and wildlife habitat and embodies the beauty and character of the local landscape. Low-impact activities, such as walking, nature observation, and fishing are allowed, where appropriate, and horseback riding is also permitted on certain sites.

GREENSPACES

Greenspaces are passive-use open spaces and turf areas without developed amenities or structured functions.

TRAILS & BIKEWAYS

Trails are non-motorized transportation networks separated from roads. Trails can be developed to accommodate multiple uses or shared uses, such as pedestrians, in line skaters, bicyclists, and equestrians. Trail alignments aim to emphasize a strong relationship with the natural environment and may not provide the most direct route from a practical transportation viewpoint.

principal focus is on safe and efficient non-motorized transportation. Bikeways serve distinctly different user groups than trail users. Typical bikeway user groups would include bicycle commuters, fitness enthusiasts and competitive athletes. Their emphasis is on speed, which can create conflicts with recreation-type trails and their respective user groups.

For shared-use trails, it is important that the alignment and cross sections be designed with flexibility to accommodate higher speeds, passing zones and greater widths. Surfaces will vary with intended use and environmental considerations. Additionally, parking, consistent signage (wayfinding, access, use hierarchy) and interpretive markers or panels should be provided as appropriate.

SPECIAL FACILITIES

Special facilities include single-purpose recreational areas such as skateparks and display gardens, along with community centers, aquatic centers and public plazas in or near the downtown core. Additionally, publicly-accessible sport fields and play areas of public schools are classified as special facilities; while they often serve as proxies to public parks, school sites have restricted daytime access and offer limited recreational use during non-school hours. No standards are proposed concerning special facilities, since facility size is a function of the specific use.

Road conditions	2
Totals	147

Other - Write In	Count
No barriers (should be an option)	1
A desperate lack of fire wise prevention contributes to wildfires which impacts health and safety, causing inhibited recreational opportunities during prime activity months. Please prioritize clearing ladder fuels and forest thinning.	1
Afraid to go by myself. New to the area.want to go with someone knowledgeable to be safe	1
Atv, motorcycle limited use	1
Bad road conditions	1
Better put-in takeout sites along Wenatchee River. Take-out at park not good and over used. Take out dam and put a whitewater park.	1
Boat ramp below rocky reach is old, metal pops tires, rough, limited parking	1
Closed gates	1
Closed to motorized use	1
Commercial users of some of these lands dominate the space	1
Connecting Motorcycle Use	1
Creepy vans or vehicles that look like they are being lives in, are in the parking lot	1
Day use permits would solve many issues	1
Discover pass is a hinderance and only pays for enforcement	1
Dog parks for off leash run in uncrowded, more sanitary locations, East wenatchee	1
Dogs not allowed	1
Enchantments need better day use rules, as well as a way that still allows locals decent access. It's frustrating when you've lived here for years and you can't get a permit for the core, I don't want that same experience in a day permit. We need reserved walk up permits, or locals permits.	1
Excessive gubbament regulation and interference. Getting tested multiple times for the same land. Access pass is fucking bullshit. Liberals should be restricted to city limits.	1
Fire and smoke	1
Forest service roads are destroyed	1
Totals	147

Other - Write In	Count
Gated public access roads	1
Gates closed well into spring for no reason	1
Gates on county unmaintained roads	1
Gates on open county roadways that are not being maintained.	1
Hace falta un centro málaga	1
Hay Canyon- Homeless camps and tons of shooting	1
Health and safety concerns due to wildfire smoke	1
Homeless and vehicle breakins	1
I don't really experience barriers to my use - just time!	1
I have not experienced any barriers	1
I poop in the woods it actually cleaner than any bath room	1
I revisit spaces and so don't make it to all of them.	1
I'm sure I've accessed them plenty… I just don't know their formal names…	1
Lack of OHV areas	1
Lack of ORV opportunities	1
Lack of access for dirt bikes	1
Lack of access to rivers with heavy whitewater rafts. More access where a trailer can back in. More places where a wide craft can be carried to or from the river. Includes the Wenatchee and chiwawa rivers	1
Lack of adequate signage for trails- ie: having a map/marker at a trailhead detailing trail difficulty/features/showing where it starts and ends.	1
Lack of drinking fountains along the apple capital trail.	1
Lack of income.	1
Lack of livestock(horse) friendly access.	1
Totals	147

Other - Write In	Count
Lack of motorized trails	1
Lack of single track motorized trails, especially with loop opportunities	1
Lack of trail maintenance	1
Limited Non-motorized winter recreation areas for backcountry skiing and snowshoeing.	1
Limited trails for Dual Sport, single track motor and single track mtb.	1
Motorcycle access trails poorly maintained.	1
Motorcycles hurt the trails	1
Motorized traffic makes areas unappealing or unsafe	1
Moved here in 2017 we're blessed to have so many options with so little time due to owning a business who's busiest season is spring and summer.	1
Need additional new trails in Manson and Chelan area	1
Need more ORV aeas	1
Need more ORV opportunities	1
Need more horse trails and information	1
Need more motorized recreation	1
Need more time to ride motorcycles offroad	1
No Barriers.	1
No barriers	1
No public access to Deer Mountain	1
Non-motorized winter access	1
None honestly	1
None of the above	1
Not Dog Friendly	1
Totals	147

Other - Write In	Count
Not always motor recreation use	1
Not authorized for motorcycle use.	1
Not enough atv/orv parks	1
Not enough enforcement to protect the site, the stream, the vegetation and soils are deteriorating in easy access areas. Visitor and RVer/fisher/hunter garbage and waste is causing land and water quality issues and wildlife/fish issues at more sites since Covid hit. MORE EDUCATION, PERMIT SYSTEMS AND ENFORCEMENT IS NEEDED for what you already have and increases in recreation areas.	1
Not enough free time!	1
Not enough motorized vehicle options (atv & motorcycle)	1
Not enough mountain bike specific infastructure	1
Not enough new motorcycle trails. Existing trails are over ridden. Need to expand the trail systems.	1
Not enough orv area	1
Not enough time, use areas close to home	1
Not enough winter parking for ski touring locations	1
Not interconnected by trails/accessible by bike	1
Over zealous fees for some and as a pet owner Wenatchee needs desperately small and large dog parks/separate for safety and the more investment into that then tourists will not deal with unruly dogs on paths and no dog poop either-it can be a win win!	1
People firing guns crazily and out of hunting season	1
People not obeying the park regulations, including fishing and hunting laws. NOT enough enforcement.	1
People using guns/shooting im areas where people hike and camp	1
Poor road conditions and road maintenance of dirt/gravel roads	1
Poor road conditions. Unofficial trails that lack proper d be design and maintenance but are great rec opportunities	1
Poor roads (eg to the top of Nahahum, Swakane, No 2 canyon	1
Totals	147

Other - Write In	Count
Poor trail conditions	1
Poor trail maintenance	1
Poorly maintained roads to the more remote areas	1
Prefer bike paths	1
Public lands blocked by private lands	1
Require dogs "on-leash"	1
Road closures	1
Road conditions. Thanks for updating number 2 canyon road!	1
Roads are not always passable by regular vehicle	1
Roads are not being maintained and can't get to trailheads	1
Roads in rough shape preventing access	1
Roads need maintenance USFSFS	1
Rules about motorcycles and lack of trails	1
Shouldn't pay fees if nothing is maintained	1
Some areas locked by private land	1
Stupid permits that don't favor locals	1
The dirt roads are poorly maintained/ not graded/ and not brushed out. Just super rough dirt road access.	1
The fairgrounds is not available to the community in the winter because of boat storage. And in the summer, difficult to reserve.	1
Theft, vandalism, vehicle security	1
Too crowded, but only Colchuck Lake trail, really	1
Too many fees for access or use our public lands. Let the public have our lands back.	1
Too many people from out of the county	1
Totals	147

Other - Write In	Count
Too many people, too many people who disrespect natural areas and can be unsanitary.	1
Too many teenagers with off-road vehicles or shooting near such areas especially during fire danger.	1
Too much goverment involvement.	1
Traditional homelands should not have barriers to access.	1
Trail difficulty markings	1
Trash condoms all over parking area at saddle rock	1
Unauthorized motor vehicle use	1
Uncontrolled target shooting, off-leash dogs	1
Undeveloped areas without trail maintenance and signage	1
Vehicle breakins	1
Vehicle security, Vandalism, unleashed dogs	1
We have many parks and recreation opportuities. I wonder if we have TOO many.	1
We look for places we can ride dirt bikes or dual sport motorcycle	1
We spend most of Apr-Sep up by Plain, we enjoy anywhere we can go on our dirt bikes, ATVs, and dual sport bikes.	1
Where are they?	1
Which pass for which location is an issue.	1
Who owns it	1
Would like to see public swimming availability as well as an outdoor pool. I would also like to see boat dinner cruises, like in Kirkland argosy	1
access points to busy, break in/theft at parking areas	1
bicycle access/pathways	1
camps of people living in parks	1
Totals	147

Table L-3
Level of Service Roadway Capacities

Land Use	Functional System	LOS B	LOS C	LOS D	LOS E
		Service Volume	Service Volume	Service Volume	Service Volume
Rural[1]	Prin. Arterial	7600	11100	12400	13600
	Minor Arterial	6800	10200	11500	12600
	Collector	5900	9300	10600	11700

Source: Simplified Highway Capacity Calculation Method for the Highway Performance Monitoring System, Table 16. Stop sign-controlled highways generalized service volume table.

1. Roadway capacities associated with the 'rural" land use type were applied for all Chelan County roadways given the relatively low density of intersection spacing and traffic signals on county roads.

CHELAN COUNTY
DEPARTMENT OF COMMUNITY DEVELOPMENT

2026 Comprehensive Plan Periodic Update
Staff Report

TO:	Chelan County Board of County Commissioners
FROM:	Chelan County Community Development
HEARING DATE:	November 10, 2026
FILE NUMBER:	CPA 2026-148 (Comprehensive Plan Periodic Update and Appendices)

2026-2046 Comprehensive Plan Periodic Update

Project Description

Chelan County is required under the Growth Management Act to review and update the Comprehensive Plan and corresponding development regulations every ten years (RCW 36.70A.130). This current review primarily focuses on updates mandated by state legislation. All the goals and policies of the comprehensive plan were reviewed with the intent of determining whether any needed to be revised, added to or removed to be compliant with state law. Each of the Elements has been modified to some extent and the appendices re-numbered and updated as outlined below:

1. Introduction – Updates the purpose of the Comprehensive Plan, summarizes the history of comprehensive planning in Chelan County, describes the public participation process, presents community vision statements specific to regions of the study area, and outlines how the plan will be implemented and monitored.
2. Land Use Element – Updates the framework for guiding growth and development in Chelan County, including land use patterns, UGAs, commercial and industrial development, open space and recreation, master planned resorts, and environmental justice. The update includes revised population and demographic information and additional planning guidance for the proposed conversion of the Malaga Limited Area of More Intensive Rural Development (LAMIRD) to an Urban Growth Area.
3. Rural Element – Updates the framework for guiding growth and development in Chelan County's rural areas, including rural land use designations, siting criteria, and LAMIRDs. Also incorporates goals and policies to identify, protect, and enhance rural communities and natural areas at risk from hazards, such as wildfires and flooding.
4. Resource Element – Updates the framework, policies, and rationale for conserving and managing Chelan County's natural resource lands, including agricultural, mineral, and forest lands, while providing policies for the protection of natural systems and critical areas.
5. Housing Element – Provides an assessment of current and future housing needs in Chelan County through analyses of housing supply, land capacity, demographic and socioeconomic trends, and housing policies and programs. The update also incorporates goals and policies to encourage resilient development and redevelopment that enhances the health and safety of occupants.
6. Capital Facilities Element – Identifies existing and planned public facilities and services, establishes LOS standards, and includes the County's 6-year capital financing plan. The update includes revisions to facility

inventories and planned improvements, including public utilities, fire protection services, and County-owned properties.

7. Utilities Element – Describes existing utility services and infrastructure, evaluates future utility needs, and includes updated utility information, public utility contact information, and policies to support the provision of utility services.
8. Economic Development Element – Describes Chelan County's economic conditions and trends and establishes goals and policies to support economic development. The update includes revised employment, population, and educational data.
9. Park and Recreation Element – Replaces the existing Parks and Recreation Element with Chelan County PROS Plan.
10. Shoreline Element – Incorporates the Chelan County Shoreline Master Program (SMP)as adopted in 2021, as the Comprehensive Plan's shoreline element, providing goals and policies for shoreline management consistent with state law.
11. Transportation Element – Evaluates Chelan County's transportation system, establishes goals and policies for future transportation planning, and identifies capital improvements to meet current and future needs. The update includes revised transportation data, capital planning information, and new policies to support a resilient transportation system.

Appendices:

Appendix A: Public Participation Summary Report

Appendix B: Manson Comprehensive Plan

Appendix C: Peshastin Comprehensive Plan

Appendix D: Malaga Urban Growth Area Plan

Appendix E: Stehekin Community Plan

Appendix F: Resiliency Plan

Appendix G: Land Capacity Analysis

Appendix H: Designation Maps

Appendix I: Racially Disparate Populations Analysis

Appendix J: Capital Facilities Plan

Appendix K: Recreation Element Parks, Recreation, and Open Space (PROS) Plan

Appendix L: Chelan County Roadway Level of Service (LOS) Analysis Summary

These updated elements additionally include:

- Maps, charts, and tables to reflect updated requirements under the GMA
- Goals and policies integrated into each element to encourage natural hazard resiliency and mitigation actions

Malaga Urban Growth Area Plan

The proposal is to convert the existing Local Area of More Intense Rural Development (LAMIRD) to an Urban Growth Area (UGA). The area that would be encompassed by the UGA would consist of approximately 4,500 acres, about half of which is zoned Rural Industrial (RI). Another 1,100 plus acres of the area is zoned Rural Village (RV) and Rural Residential Resource (RRR), both of which allow relatively high residential densities compared to the non-LAMIRD residential designations. The remainder of the area is zoned at rural residential densities of 2.5 and 5

acres. As a result, the Malaga LAMIRD has experienced a significant amount of smaller lot growth which has resulted in pressure on services in the area including roads, and utility infrastructure.

Stehekin Community Plan

The Stehekin Community Plan provides a framework to guide land use, development, and public investment in a way that reflects the community's priorities and the unique conditions of the Stehekin Valley. Developed in coordination with Chelan County, partner agencies, and community members, the Plan outlines a shared vision for maintaining a viable, year-round community while recognizing the area's limited infrastructure, environmental constraints, and predominant public land ownership. As a supplement to the *Chelan County Comprehensive Plan*, it is intended to inform decision-making, support coordination among agencies, and help ensure that future actions align with the long-term needs and character of Stehekin. (*Stehekin Community Plan, July, 2026*)

General Information

Board of County Commissioners Workshop:	August 4, 2026
Board of County Commissioner Hearing Published on:	October 31, 2026
Board of County Commissioner Hearing on:	November 10, 2026
60-day State agency review:	Initiated July 20, 2026

SEPA Environmental Review

A Determination of Non-Significance was issued under 197-11-340(2) on September 1, 2026. The lead agency for this proposal has determined that it does not have a probable significant adverse impact on the environment. An Environmental Impact Statement (EIS) is not required under RCW 43.21C.030 (2) (c). The decision was made after review of a completed environmental checklist and other information on file with the lead agency. This information is available to the public upon request.

Criteria Review for Comprehensive Plan text amendments, Code Section 14.14.047
Proposed text amendments to the Chelan County comprehensive plan and county-adopted city plans must meet the following criteria:

1) **The proposal is necessary to address a public land use issue or problem; and**

   Findings: Several changes in State law, particularly in regards to housing and its affordability at all income levels and changes to land uses have occurred which are required to be considered as part of the Comprehensive Plan periodic update pursuant to RCW 36.70.130. The conversion of a LAMIRD to a UGA as is proposed with Malaga, would allow for the provision of services which would provide protection to the natural environment and accommodate new residential housing at all income levels to meet the demand for housing in the area.
   New Growth Management Act requirements include utilizing the Parks, Recreation and Open Space Plan (PROS) as the Parks and Recreation Element and providing new Climate Resiliency policies. A Climate Resiliency Analysis was conducted, the product of which was used to develop new goals and policies.
   Stehekin is a small, geographically isolated community located at the head of Lake Chelan along the Stehekin River. The North Cascades National Park and Lake Chelan Recreation Area make up most of the federally owned property in the area. Given these unique circumstances, the community indicated a need for planning and land use direction in order to support a viable year-round community on the private

holdings that are left. In order to facilitate that need, a new community plan with updated policy direction is needed.
The Transportation Element, as required, provides an analysis and focus on multimodal transportation with an emphasis on active/human-powered modes, active transportation and complete streets for highways, multi-modal level of service, safety for vulnerable road users, ADA transition plans, reduction in vehicle miles traveled and greenhouse gas emissions, (Transpogroup presentation to Chelan County BOCC) rather than its primary focus on vehicular traffic. The updated Transportation Element

Conclusions: The proposals are necessary to address a public land use issue.

2) **The proposed amendment is consistent with the requirements of the Washington State Growth Management Act (Chapter 36.70A RCW as amended) and any applicable county-wide planning policies; and**

Findings: Chelan County utilized the Department of Commerce Periodic Update Checklist to ensure consistency with the GMA. The County-Wide Planning Policies also support and are implemented by the proposed changes. Growth Management Act updates mandate the development of goals and policies related to natural hazard resiliency and updates to the Parks and Recreation Element using a new method.
The Stehekin Community Plan is a vehicle to allow the community to develop goals and policies to support the unique circumstances of their location.

Conclusions: The proposed amendments are consistent with the requirements of the Washington State Growth Management Act and the intent of the county-wide planning policies.

3) **The text amendment complies with or supports the comprehensive plan's goals and policies, or how amendment of the plan's goals or policies is supported by changing conditions or state or federal mandates; and**

Findings: Climate resiliency and housing issues have resulted in many changes to state law not previously addressed in the Chelan County Comprehensive Plan to the same extent as now required. The proposed comprehensive plan update focuses on new and revised goals and policies to specifically address these issues. Other proposed text changes address new requirements regarding utility providers, transportation analyses, capital improvements and other minor corrections and updates.
Stehekin does not have a community specific plan for the development of a year-round, sustainable community due to its remote location and unique land ownership patterns in the valley.

Conclusions: The proposed text amendments support the comprehensive plan's goals and policies and are supported by changing conditions or state mandates.

4) **The amendment does not adversely affect lands designated as resource lands of long-term commercial significance or designated critical areas in ways that cannot be mitigated; and**

Findings: New goals and policies regarding climate resiliency support strategies for enabling resource lands to be protected.

Conclusions: The proposed amendments do not adversely affect lands designated as resource lands of long-term commercial significance or designated critical areas in ways that cannot be mitigated.

5) **The proposed amendment would serve the interests of not only the applicant, but the public as a whole, including health, safety or welfare.**

Findings: An extensive outreach program was designed and implemented in order to receive public comment regarding the comprehensive plan update. In addition, Chelan County has reviewed the

amendments with input from the general public through public meetings and/or workshops held with the City of Chelan, the Malaga-Colockum Community Council, the Manson Community Council, the Peshastin Community Council, the Stehekin Valley Community and Chelan County Planning Commission.

Conclusions: The proposed amendments serve the interests of the public as a whole, including public health, safety or welfare.

Criteria Review for Comprehensive Plan map and Urban Growth Area amendments, Code Section 14.14.060

(1) General Review Criteria. Proposed amendments to the Chelan County comprehensive plan maps and county-adopted city comprehensive plan maps as these plans relate to the unincorporated portions of each city's urban growth area (UGA) must meet the following criteria:

(A) The proposal is consistent with the goals of the Growth Management Act (Chapter 36.70A RCW), and any applicable county-wide planning policies; and

Staff Finding: RCW 36.70A.11 addresses the requirements for the adoption of urban growth areas. One such requirement is that the area must be characterized by urban growth. The Malaga LAMIRD exhibits existing urban characteristics including increased housing density, population growth and concentrated development patterns within the existing LAMIRD. Specifically, Malaga zoning currently allows up to 3.5 dwelling units per acre, while surrounding rural areas have densities of less than one dwelling unit per 2.5 acres. Additionally, Malaga is projected to accommodate future population and employment growth, supported by regional economic drivers such as energy and technology industries. An effort is currently underway to fund a sanitary sewer analysis to determine the feasibility and cost for the provision of sewer to serve the new urban growth area.

Staff Conclusion: The proposed amendments are consistent with the goals of the Growth Management Act (Chapter 36.70A RCW), and any applicable county-wide planning policies.

(B) The amendment is consistent with or supports the Chelan County comprehensive plan goals and policies; and

Staff Finding: The conversion of the Malaga LAMIRD to a stand-alone urban growth area would allow for a more ordered continuation of existing development patterns and support the provision of urban services necessary to support that growth.

Staff Conclusion: The proposed amendments are support the Chelan County comprehensive plan goals and policies.

(C) The amendment complies with comprehensive plan land use designation/siting criteria; and

Staff Finding: The Malaga LAMIRD area has experienced relatively high density and industrial development without the provision of urban services. As a result, some degradation of the local water table in regards to nitrates have been documented. The Chelan Douglas Port Authority has also included a majority of the proposed urban growth area within a Tax Increment Financing (TIF), which is a public funding tool to pay for infrastructure. One of the identified projects for this area is the investigation and possibly funding for sanitary sewer infrastructure. Urban growth areas can only be established where urban services are or can be provided.

Staff Conclusion: The proposed amendments comply with comprehensive plan land use designation/siting criteria and unique character of each area.

(D) The amendment is supported by and consistent with the capital facility element and the transportation element. Amendments that would alter existing provisions of the capital facilities or transportation elements shall demonstrate why existing provisions should not continue to be in effect or why existing provisions should be amended; and

Staff Finding: The proposed amendments to the Malaga area, are not anticipated to modify the goals, policies or projects within the Transportation Element or Capital Facilities Element.

Staff Conclusion: The proposed amendments are not in conflict with the Capital Facility Element or the Transportation Element.

(E) The amendment does not adversely affect the surrounding land uses; and

Staff Finding: Existing land uses in the proposed Malaga urban growth area consist of residential uses exceeding density in the surrounding rural areas, small commercial enterprises and large areas of industrial zoning actively being developed or under consideration for development.

Staff Conclusion: The proposed amendments do not adversely affect the surrounding land uses.

(F) The amendment does not adversely affect lands designated as resource lands of long-term commercial significance or designated critical areas in ways that cannot be mitigated; and

Staff Finding: The proposed urban growth area does not include any land designated for long term commercial significance. All future development would be evaluated for critical area impacts on their own merit, during permit review.

Staff Conclusion: The proposed amendments would not adversely affect lands designated as resource lands of long-term commercial significance or designated critical areas in ways that cannot be mitigated.

(G) The amendment does not adversely affect the supply of land for various purposes which is available to accommodate projected growth over the twenty-year planning period covered by the comprehensive plan; and

Staff Finding: Chelan County along with the Cities of Cashmere, Chelan, Entiat, Leavenworth and Wenatchee agreed on the population allocations, consistent with the County-Wide Planning Policies, adopted by Resolution 2024-18B. The County portion of the approved allocation was for the retention of lower income housing with the intent for location in the Malaga area which is one of the last affordable areas for housing in the county.

Staff Conclusion: The proposed amendments do not adversely affect the supply of land for various purposes which are available to accommodate projected growth over the twenty-year planning period covered by the comprehensive plan.

(H) The proposed amendment serves the interests of both the applicant and the general public including public health, safety, and welfare.

Staff Finding: The amendments are intended to update the Comprehensive Plan and Development Regulations to address changes in State law, changes in land use conditions and community desires. Additional changes may occur based on additional public testimony through the hearing adoption process.

Staff Conclusion: The proposed amendments serve the interests of the general public including public health, safety, and welfare.

(2) Urban Growth Area Amendments. In addition to the criteria stated previously, proposed urban growth area boundary amendments must also meet all of the following criteria:

(A) The area designated for the expansion of any urban growth area shall be contiguous to an existing urban growth boundary; and

Staff Finding: This criterion does not apply; the proposal is to convert an existing LAMIRD to a stand-alone urban growth area.

Staff Conclusion: Not applicable

(B) Urban growth areas shall contain areas characterized by urban growth; and

Staff Finding: Malaga represents an existing concentration of development where urban growth has already occurred. Conversion to a UGA allows growth to be directed to this area rather than expanding into undeveloped rural or resource lands. Malaga should be considered a "tier 2" urban growth area: residential densities and industrial development are at or approaching urban levels; urban services are needed to continue those uses in a way that protects public health.

Staff Conclusion: The proposed urban growth area is characterized by urban growth patterns.

(C) Urban growth areas shall be served by or planned to be served by urban governmental services; and

Staff Finding: As part of the TIF implemented by the Chelan Douglas Port Authority, is a commitment to explore the potential provision of sanitary sewer to the new urban growth area.

Staff Conclusion: There are existing and planned exploration for the potential of urban governmental services to the area.

(D) Urban growth areas shall be designated so as to be compatible with natural resource lands and the protection of designated critical areas; and

Staff Finding: The proposed urban growth area boundaries intentionally avoided including any resource lands. Future development would be subject to critical area review on the merits of each case.

Staff Conclusion: The proposed Malaga urban growth area would be compatible with natural resource lands and the protection of designated critical areas.

(E) Expansion or amendment of an urban growth area should also meet one of the following two criteria:

(i) There is insufficient land within the existing urban growth area to permit and support the urban growth that is forecast to occur in the twenty-year time frame covered by the comprehensive plan, including population forecasts and allocated urban population projections; or

(ii) There can be shown an overriding public interest which shall clearly demonstrate: that the amendment of the urban growth area is necessary to protect the public health, safety and welfare; and that said amendment shall further the goals and policies of the comprehensive plan and the Growth Management Act.

Staff Finding: This criterion is not applicable as this action does not involve an existing UGA expansion.
