

HABITAT RECOMMENDATIONS:

Category 1 Habitat Priority: Most closely resembles natural, fully functional aquatic ecosystems. These sub-watersheds comprise large, connected blocks of high-quality habitat that support more than two listed species. Exotic species may be present but are not dominant in abundance. Protecting these areas is a priority, although restoration in some areas is also needed.

Recommendations from the Draft Upper Columbia Spring Chinook Salmon, Steelhead, and Bull Trout Recovery Plan (UCSRB, 2005) and the Upper Columbia Biological Strategy (UCRTT, 2002):

Lake Wenatchee Sub-Watershed

a) Protect remaining near shore habitat, and develop a means to reduce impacts of bulkheads (UCRTT, 2002).

Little Wenatchee Sub-Watershed

a) Reduce sediment recruitment to the stream by improving road maintenance within the watershed (UCSRB, 2005).
 b) Protect stream channel, riparian, and floodplain functions; focus on Little Wenatchee River falls downstream to mouth (UCRTT, 2002).

White River Sub-Watershed

a) Increase habitat diversity within the lower 2 miles of the White River by reconnecting the floodplain and wetlands to the river (UCSRB, 2005).
 b) Protect stream channel, riparian, and floodplain functions. Focus on Panther Creek downstream to mouth (UCRTT, 2002).
 c) Protect shorelines along Lake Wenatchee near White River mouth (UCRTT, 2002).
